Surely by now everyone knows not to pay any serious attention to Lennie
the Loose, who still can't tell the difference between Amateur radio and
any other kind. The station I described was the HAM RADIO station at
Fort Monmouth, not the big military stuff. And - I wasn't even assigned
to a radio station, rather as a broadcast engineer at a *TELEVISION*
station!

And Loose Lennie *still* can't join in the fun.

Dick

In article Dwight Stewart says...

> God also made dog manure, Cecil.

What, are you dislexic or something? doG makes doG manure. God makes God manure.

If I were God, I don't think I'd make any kind of manure. If I were God, I damned sure wouldn't try to smoke dogshit. If I were God, I'd get together with all my other God friends and have a big party. We'd all get stoned/drunk and create unliftable rocks, then try to lift them. It would be loads of fun! Then I'd probably just destroy the rocks with a lightning bolt. Then I'd probably pass out.

How about some technical data proving your claim about republicans not liking to have sex with women? Statements like this cast a 'lot of doubt' about your abilities in other areas, such as electronics etc. I mean this is such obvious bullshit, it makes me wonder if your learned comments on other things might also be bullshit!

And yea, I'm a new republican, got so disgusted with Clinton and company, I changed parties, and I still like women!

I presume you still support Clinton and hold him in high regard. He was such a outstanding example of a President of the United States, wasn't he, ugh! puke! I don't know about you, but I was totally embarassed and ashamed to have him represent us/me to the entire world...!

I don't understand. My license says "Grant Date" 8-14-1998,
"Effective Date" 6-1-2000, and "Expiration Date" 6-18-2006
Nothing to do with ten years.

Say a guy with an Extra from 1999 changes his call sign.  The fee covers ten
years so a new license is issued and the old one cancelled.  No effect on
the totals but it moves from one expiration month to another

You're in pedant mode again.  The treaty makes no distinction.  In practice,
we take the position that as VHF operation has no international effect, who
cares what the treaty says.

In your case of hte squatter, you stated that noone had noticed him. The
major and important difference here is that freebanders have been
noticed and lots of people are raising hell about it. To bring your
analogy into line with freebanding, the squatter would have had to hold
onto the land for the required number of years through either armed
force, or simple civil disobediance, not by not being noticed.

I have never run my CB this way. I do have an echo mic on my GrantXL, but the echo "volume" is barely cracked open. According to three different modulation meters, I'm set at 99% modulation.

The fellow I was talking to runs his radio in much the same way. He has a Cobra 148 (same radio, basically), and has his set similarly.

Any more than 100% modulation is going to sound like crap, and probably bleed over. I know this, and those CB'ers who know this try to avoid bleeding over, etc...

Now, if you don't mind, I need a nap before I go down to the testing center to test for my ticket. Have a nice day, Rob, and I hope "huked on fonix" continues to help your English grammar. ("there's usefull"? Come On!)

And since we are on the subject of headers:

It is time for my monthly disclaimer, in case any newbies have arrived since Leland's last folly with my nic and email.

.

KC8LDO Leland C. Scott forged the original post, it wasn't me. His number of aliases and forged posts and emails are staggering, but he especially likes forging me. Please check the headers. Leland C. Scott, KC8LDO, and Doug Adair, N8wwm, and their many, MANY aliases are responsible for ninety five point nine percent of the strife on the rec.radio.cb ng, and probably on many of your amateur forums as well, especially lately. A good number of posts appearing with no call signs have been easily identified as the same forgers in the cb ng.

Thank you all for the replies via email, as most were polite and well written, as were the many offers to assist me in attaining a ham license, however, I believe in returning things to their rightful owners, so any additional correspondence should be directed at the author of the forged post and troll.

After exposing Leland for forging me over a month ago with the assistance of another licensed amateur, he has waged a personal vendetta against me.

He searched the web and found an article I wrote on freebanding for a hobby magazine over a year ago and has posted it numerous times in an effort to justify his own behavior towards myself and other cbers. He draws his own inferences and hurls unfounded accusations and insults. Leland's main line of defense has always been attack his accuser, no matter who it may be. If anyone would dare suggest Leland may be wrong, he has no defense other than to attack about "What you did" and it is usually a lie (from questioning one's sexual preference to threatening them).

He has repeatedly accused me and others of pirating on amateur frequencies, and nothing could be further from the truth. I understand how an amateur could feel so strongly as to defend his allocated frequencies, but attacking countless individuals behind phony names, forging people, forging email headers in his posts, throwing accusations left and right and refusal to remove anything personal and not on subject off the ng exemplifies what this particular individual and his two cronies are about. He also reported me to my ISP for "forging" (the gall) and was so certain it was me that he made many posts threatening that I was about to lose my internet service. When he received word it wasn't me from my ISP, this sent him into a rage, as it did when I first exposed him. He has accused me of forging for so long (pot, kettle, black) he now accuses my ISP of "lying" to him. I guess the more Leland decides to forge me in your amateur forums, the more frequent I must point out the error of his ways.

I asked Leland and "Sparky" to take whatever personal problem they may have with me to email and I will be glad to debate whatever merit they see fit, but as all will see, these two are more interested in calling names, perpetuating problems between operators and will not cease their childish games....hence the crossposts They don't WANT the strife to go away. I apologize that they feel the need to make you all a part of it, and I was going to ignore most of the emails and what was forged of me, but then the email I received from amateurs was so far from what I expected. Leland forged me and posted that article in a manner to which I would be flamed, and instead, I received email from a great number of amateurs who didn't flame at all.

Quite the opposite, many offered to assist in getting my ticket, and for that I thank you. Turning the tables, if it had been me that were a licensed operator and someone posted an article about freebanding in an amateur format I frequented, I may have been one of the flamers, but as I said, the reaction from amateurs across the land was quite different than what the original author intended. If a post appears to be from me in anything other than the cb ng, please check the headers....if it has any other path than this one, it is a forge. All emails answered. Have a good day.

Now that I'm virtually finished with learning the cw portion of my soon to be new ticket, I guess I can feel a bit of empathy for the old timers who are p****d off for the reduction in cw speed for new applicants.

I worked my butt off to learn the cw, and am kinda proud of it. Yes I know it isn't 13 wpm or higher, but it was quite an effort to get this far.

And I suspect that I'll be a little annoyed when the requirement is dropped altogether. I hadn't originally planned to use cw mode, but now I think I just might. Funny how yer outlook can change.

So I know where you guys are coming from.

Sure....even if you're avenging the murder or attempted murder of your
child, you are still subject to the law and any resulting consequences.

So you let off the gas some more. It doesn't take a brainiac to figure out that arriving at your destination a few seconds later is still much better than dying in a high-speed crash on the freeway.

Do you even know the difference between horizontal gain and vertical
gain? I never said a word about antenna orientation.

The freebanders go relatively unnoticed by the FCC and the FCC is
who matters.

And, of course, I never said anything about a half wave antenna, either.

Goes both ways, I guess.

There are no factors in play in this large metropolitan area which
make ham radio here any different from ham radio anywhere else. With
the exception of the volume of repeater abuse in California which we
don't have here.

I'm not Larry and Morse is a means, not an end. One needs the skill to
have the means to achieve the end result. I developed my skill with

Morse in order to achieve my operating objectives. Which in the case
of Morse in ham radio also means that I have additional bandwidth and
a mode for communicating vs. those who have not developed that skill.

Definitipn: More stations in the same bandwidth. Duh?
>
>No doubt this would have to feature OOK CW codings.   :-)
>
Nope again Lenny. More selective vhf/uhf receiver front ends so that
the FM repeaters can be packed closer together. For one. I'm waiting
for the technical geniuses who had been previously prevented from
getting on the air because they can't hack the code to strut their
stuff and come up with radios which are more spectrally efficient.

I kicked the ARRL habit 20 yrs ago. I now have a life and no longer believe that the world revolves around ham radio. I often wonder if the ARRL has ties to the Unification Church? It would not suprise me if upon visiting the airport if I saw a Moonie, a Hare Krishina and an ARRL member, each within 10 feet of each other all in a row, with tables hawking their "brand of religion". The Moonie would be selling subscriptions, the Hare Krishina would be bangin his tamboreen and the ARRL guy would be sending "jesus & morse code saves" via a 30 year old Lafayette Radio code practice oscilator with a half-dead 9V battery inside it. That's what I love about ham radio. Still the only hobby with more per-capata screwballs in it than Bellevue State Hospital.

Pride of achievement is A-OK but empathy for selfishness?? I
think not! The fact that one (or many) individuals had to endure
a hardship is no excuse for making others do the same.

Morse was once the only practical method of radio communications
and a major purpose for amateur radio was to provide a pool of
Morse-capable operators. But that is no longer true! So there is
no valid reason to require new Hams to endure Morse training. We
might as well require them to pole vault 14 feet.

When I was 16, police locked me up and stole $150 I'd earned
busting my butt 6 hours a night after school and all day on
weekends for a month. Should *everybody* have to endure a being
robbed and jailed just because I did? Seasonal allergies are
tearing me up right now. Should you have to suffer just because
I'm suffering? More to the point, do I have any right to be
"p****d off" because others are "getting away" without allergies
and without being robbed by police? Not in my book! Call a spade
a spade: people with that kind of attitude are spiteful SOBs and
deserve to be treated accordingly!

Give it time. Their letting UPR run with their screw-ball on a string before they yank then good and hard. BTW, did you catch the deliberite jamming of WWFV on Sunday night from about 11:00PM to Midnite on 5.085? WWFV was broadcasting a program which was offering constructive criticism of the "pay-triot movement" and presenting felon Koernkie as an excellent example of just how kooky some of these shortwave morons are. They weren't 10 minutes into the program when a powerful AM carrier came up on 5.085, moved frequency just a bit to get the best jamming effect, and parked on the frequency for the next 45 minutes jamming the legitimate WWFV transmitter.
The only reason I mention this is that a month before UPR fired up, there was an alleged incident where a then-licenced ham Op from Kentucky was cited by the FCC's Riely Hollingsworth for jamming [guess who?] WWFV on 6.890!
Story goes the jammer was pissed off that WWFV had canceled Koernkie's program. (WWFV canceled it for non-payment of airtime and the station manager stated his reasons for doing so on several consecutive nights) Shortly thereafter, WWFV was being jammed by a station DF'd by the FCC to Kentucky. Go figure.

Let's take a listen on 5.085 from 11PM - 12AM EST this Sunday night
and see if WWFV is jammed again.

Hi Jerry,

You have poor reading skills OM.

On Tue, 8 May 2001 07:32:26 -0700, "JerryL" <jlockett@onemain.com> wrote:

>How about some technical data proving your claim about republicans not
>liking to have sex with women?

Never said that. One example is Newt. He had an affair with a female member of his staff before he resigned..

Here is what I said:

>Republicans are more likely to have sex with Yasser Araofat and his
>male camel than women. Like they did with congressional pages.

>Statements like this cast a 'lot of doubt'
>about your abilities in other areas, such as electronics etc. I mean this
>is such obvious bullshit, it makes me wonder if your learned comments on
>other things might also be bullshit!

What is BS about it?

1.) Bush looks like a monkey

2.) We had a problem in the House and Senate with congressmen and senators having sex with pages

3.) The Republican heading the "let's get Clinton" group was arrested TWICE for exposing himself in a park and for soliciting sex with a male undercover decoy in an Atlanta park

>And yea, I'm a new republican, got so disgusted with Clinton and company, I
>changed parties, and I still like women!

Good for you. We really ought to throw all the bums out.

Before someone whines about Clinton, we should insist he not have an extramarital affair himself. Before someone heads a crusade to prosecute someone else for banging a 21 year-old-female and lying about it, we should make sure he isn't "hanging out" in public parks trolling for young males.

>I presume you still support Clinton and hold him in high regard. He was such
>a outstanding example of a President of the United States, wasn't he, ugh!
>puke! I don't know about you, but I was totally embarassed and ashamed to
>have him represent us/me to the entire world...!

Frankly, both parties embarass me. I'm ashamed of many of them, and embarassed that people think either party does not have more than its fair share of dishonest members and even the occasional pervert.

Why on earth would anyone think that a certain party affiliation means the people are honest or moral?

We let them all get away with far too much.

Now think about this...it is important. As bad as Gore was...and as disliked as Clinton was....the best the Republicans could do was Bush. They fielded a candidate that actually LOST the popular vote to someone like Gore!!!! Phew!

Embarassing, isn't it?

In article <9d8ueb$dsg$0@208.207.71.146>, Dick Carroll <dixie@townsqr.com> writes:

> Surely by now everyone knows not to pay any serious attention to Lennie
>the Loose, who still can't tell the difference between Amateur radio and
>any other kind. The station I described was the HAM RADIO station at
>Fort Monmouth, not the big military stuff.

If the time period was actually 1962, then the so-called ham radio station at Fort Monmouth was really a MARS station. As such it would allow fully-credentialled amateurs to use the station for recreational purposes. However, that is the definiton from 1952 when I was at the Signal School at Monmouth. Obviously, according to Carroll, things had changed in ten years and this "ham radio station" was a beehive and hotbed of amateur activity at a military base.

>And - I wasn't even assigned
>to a radio station, rather as a broadcast engineer at a *TELEVISION*
>station!

Ah yes, another change from Carroll's early claim of "combat training" in the Signal Corps. :-)

[mental picture of a TV combat soldier carrying a TK-30 camera at right-shoulder arms...]

"Broadcast engineer" involves as much "engineering" as a railroad engineer "engineers" his locomotive on the tracks. Broadcast engineers ride gain, keep the white pedestal correct (with TV), watch meters, and leave actual fixing of equipment to the select "engineering" crew who can actually read schematics, consigned to the graveyard shift from oh-dark-thirty to sunup. Know it well at WREX-TV in 1956. :-)

Interesting that, to one who espouses CW on HF, television in the US military is considered superior to military HF operations involving communications on HF. Obviously, some do not have the "big picture" of TV and its relationship to CW on HF.

>And Loose Lennie *still* can't join in the fun.

Incorrect. Carroll doesn't understand that the object is to change certain radio regulations for the benefit of many, not one individual. Carroll cannot understand that because he cannot argue against changes but must preserve them in order to maintain his delusion of superiority in amateur matters.

The "fun" seems entirely of putting down "inferiors" who have not accomplished Carroll's personal achievements. Is that "fun" and a role-model for newcomers?

In article <cxKJ6.27050$kh.15296051@news1.rsm1.occa.home.com>, "Jim Wayda" <jwayda@killspam.home.com> writes:

>I understand that CW is required to conform to the ITU. When will this
>archaic testing requirement be eliminated?

ITU-R S25 is a group of standards which define adminstrations' (governments of ITU member nations) requirements as to amateur radio activity and licensing. S25.5 specifically states that morse code skill ("reception by ear, transmission by hand") is required for any license having below-30-MHz privileges. S25.5 does not state any rate of reception or transmission. Definitions of amateur radio are found in ITU-R S1.

The United States administration does NOT have any current agenda item concerning S25.5 specifically. Agenda items for the ITU's WRC-03 are, at present, the following:

1.7 Issues concerning amateur radio that may _possibly_ affect amateur radio (1.7.1), call sign revisions to possibly increase the number of characters (1.7.2), a review of S1 terms and definitions as a result of any S25 changes (1.7.3).

1.23 Realignment of the 40 meter band allocations worldwide so as to separate SW BC carrier frequencies from amateur allocations. Note: This has been on-going since WARC-79, 22 years, no real realignment by any administration.

1.38 Consideration of allocating 6 MHz from the 420-470 MHz bandspace for another radio service. It is not clear whether this is primary, secondary, or tertiary in possible allocation.

According to the IWG-6 (Informal Working Group 6) of the FCC's International Bureau, their meeting minutes of 16 April 2001 do not indicate anything specific nor any draft of possible revised ITU Standards as of that time. Note: The only voting members of the US ITU-R delegation consist of personnel from the State Department, National Telecommunications and Information Agency, and the Federal Communications Commission. NTIA documents (three) referencing WRC-03 are available from a link at the FCC's International Bureau web pages.

In a news item on the ARRL's web page, the ARRL is reported
to have "considered" these items and downplayed any
"changes" to license requirments having morse code testing.
The ARRL erred by omission in eliminating the telephone
bridge input of No Code International...which was reported in
the Minutes of the 4th IWG-6 Meeting at the FCC.

writes:

> Surely by now everyone knows not to pay any serious attention to Lennie
>the Loose, who still can't tell the difference between Amateur radio and
>any other kind.

That's an easy distinction. "Any other kind" of radio involves either
"civilians" using consumer-item, type-accepted radios for pleasure
or professionals using radios and equipment few amateurs can
even dream about doing actual radio communications work.

Amateur radio stations fall into sub-categories. The largest category
has already-designed-and-manufactured ham-consumer-market
equipment well illustrated in the advertisements of QST, QEX, CQ,
and 73 magazines. Photos of amateur stations in almost every
issue confirm this. Those same photos usually have some kludge
in the corner hammered together to show their "homebrewing
capability." A slightly smaller sub-sub-category must always
include the requisite morse code keying appliance in such station
photos to illustrate their support for the "spirit" of amateur radio
that venerates morse code over everything else.

Another sub-sub-category is the "real radios glow in the dark" amateur who seldom or never learned anything about semiconductor electronics, has an over-abundance of nostalgia for youthful times, and considers radio technology to have achieved its pinnacle with the advent of the 6146 "miniature" version of the 807. They also venerate the morse code mode above all others. A few radicals of this group have and use electronic keyers under the excuse of "arthritis" or similar ailments of age rather than admitting they were never really as good with morse as they claim.

A decided minority of amateur radio stations use mostly home-brewed equipment, converted surplus, assembled kits, and the like. Those fall into two smaller categories: The "glow in the dark" radioactivists who are stuck or fixated on vacuum tube technology; the professional who carries ability over to recreational radio and likes working with hardware and new technology. That latter group is never taken seriously, generally shunned by the majority as "geeks" or "nerds" unless they consider morse code as the ultimate skill achievement of amateurism, over and above any knowledge of advanced technology.

An extremely large minority group, disparagingly called "technicians" or "shack on a belt" individuals, are always shunned by longer-time "upgraded" amateurs and given "back of the bus seats" and must drink from separate water fountains. No older, long-time amateur would ever let his daughter marry one of these second-class citizens unless they made gratuitous complementary commentary on the efficacy of morse code modes.

A large but decreasing sub-category of longer-time radio amateurs are the "credentialists" who collect paper objects of veneration and glory. These are framed and hung proudly (a few have made semi-permanent plaques of these) to show their expertise and efforts in radio. This indicates that this sub-category are indeed far better than professionals who seldom get to do this frame work and wallpaper cover-up.

True or "real" radio amateurs must always venerate CW modes and HF band operating, all as emphasized in the "official" amateur publications. They must adhere to "correct" jargon at all times. They must keep the memory of the "loss" of 11 meters alive after 42 years and despise anyone who operates on Citizens Band. They must sneer and pejorate all radio professionals because they are, by their own admission, infinitely "superior" over professionals because they are amateurs.

Above all, true/real amateurs must discount any radio

physics not appearing in the Handbook or approved by
"official" membership organizations. They think that
amateur radio physics is "different" than the radio physics
of every other radio service. Further, anyone not an
amateur or not believing in the ethos and mythos of ham
radio has no experience worthy of comparison.

Yes, it is very easy to tell the differences. :-)

Not selfishness. Empathy isn't quite the same thing as agreement. Just
a bit of understanding. I don't have empathy for cranky bitterness.
>
> Morse was once the only practical method of radio communications

I think instead of strictly a Morse code requirement, the applicant should be required to show proficiency in some type of amateur mode. It would be in the form of a sub-section to the test. Subjects might include cw, ssb, fm, propagation, etc. the applicant would take a test element dealing with one of these subjects. Or what the heck, pole vaulting! 8^)

With the feeling that some people have toward the ARRL, are you certain that the
ommission was an error (vs. intentional - to serve its political agenda or
that of its members)?

Well I may have 'poor reading skills' but I take issue with you painting all people of a certain grouping with the same paint brush about their sexual perferences...There are wierdo's in any group, but not the whole group, and there is a hellva difference between Joe Blow congressman or anyone else and the President of the United States..No matter what, the President should keep him or herself above reproach in all matters, or at least be decrete about it for crying out loud and then lying about it on the national media, sheesh! To much!!!

As for ....the best the Republicans could do was Bush. They fielded a candidate that actually LOST the popular vote to someone like Gore!!!! Phew!...the last I heard on the evening news was that 'all the big time newspapers' that paid to finish the recount down in Florida, much to their chagrin, finally admitted that Bush won anyhow no matter how Gore and company tried to slant it!! As a note of interest, I didn't vote for either Bush or Gore, my candidate lost out early on....!

Actually you can run good sounding audio at more than 100%. This requires a modulation scheme other than you have in your 'CB' set. So this leads me to ask this....how can a meter read 'modulation' in the first place?

I was under the impression that in order to read Peak Power, than one needs a O-scope, one that is calibrated preferably.

Not to mention the fact, that unless you are running class C RF, and class B AF (for AM) then you can NOT ACHIEVE 99% anyway.

Dan/W4NTI

I remember we had the same type of thinking toward the japs and
nazis before december 7th, 1941. The valiant crew of USS Arizona
(among others) paid dearly for that blunder.

Take a hard look at what Dubya is doing/not doing with the oil companies right now, think back to what he had to say about the oil business during his campaign, and then take a look at the the modern Bush oil pricing structure. Now, aren't you proud to have voted for such a guy? I didn't think he could sell out in such a short order, but I underestimated the fool.

This is at odds with what other Extras are saying. You guys
don't have a consensus, do you?   :-)

So...Kelly has personally experienced the "volume of repeater abuse
in California" or is he being geographically-specific just as a
message point item? :-)

Was the "additional bandwidth" a Divine grant or wasn't it more
a result of a lobbying effort by the ARRL on the basis of their
more vocal membership including a lot of favor-morse-only
licensees? That was done way back in time as part of the
"incentive plan" license-class system, a thinly-disguised
exclusivity for certain long-timers through band planning.

The ARS "community" does not grant licenses. The FCC grants amateur radio licenses. The FCC has already said (in 1990 and 1999) that a morse code test for any license is not valid for their regulatory purposes. The FCC must keep on with morse code testing until ITU-R S25.5 is deleted or changed to remove code testing as a necessity for an amateur radio license having below-30-MHz privileges.

The "reasoning" behind long-timers' insistence on the code test is purely subjective and illogical on the following points.

1. Claim that "morse code testing is necessary because there is much morse code used.": Circular logic. If morse code testing is retained, more will be required to be exposed to it, and more will try using it. Such is a self-sustaining semi-perpetual-motion machine concept.

2. Claim that "morse code skill shows motive and dedication": No "motive or dedication" is needed beyond a desire to achieve passing a test. The FCC is not in the "motive" or "dedication" (to amateur radio) business nor should they be...the FCC establishes and enforces certain regulations, not the ethics of a hobby activity. There is nothing in radio regulations requiring any new amateur to meet existing amateur's "necessities" to rule on "motive or dedication."

3. Claim that: "Morse code is a universal language" therefore all amateurs must know it to communicate worldwide: International morse code is a representation of "western" alphanumeric and punctuation characters. The "western" written language is not a majority primary language in the world. There is no requirement that all licensed amateurs must communicate worldwide. The claim is made often by English-speaking morse code proponents yet one wonders how they would feel if the international code required skills at Farsi or any Asian "character" representations? Or even Cyrillic? The choice of English-letter representations is one of business and commerce and about 55 years of landline standardizations having little to do with radio per se. None of that is any valid justification for keeping a code test for an amateur radio license having below-30-MHz privileges.

4. Claim that "Morse code is a spectrally-efficient mode" has some validity, albeit small. Such is valid only for the "narrowband" modes (non-spread-spectrum). However, certain other modes have as little bandwidth necessity (such as PSK31) yet offer higher throughput rates even without any error-correction and without the possibility of human error in coding-decoding.

5. Claim that "morse code is basic radio communication and should be known by all amateurs": Nonsense, OOK codings were the first practical communications means in early radio due to simplistic technology of first radio. That is a long-defunct emotional hold-over from early days in radio, a product largely of myth and legend. The original licensing of radio operators required code skill because that was the only practical means for communicating between radio services for emergencies or to mitigate interference. There is little morse code used in the rest of the radio world outside amateur radio. No such skill is required to mitigate interference today.

6. Claim that "morse code test is the LAW, just DO it!": Laws are man-made and can be man-UN-made. That's such an egregious piece of bullshit that it is nothing but emotion of a dill instructor dissing recruits.

>their regulatory lurches over at least the past half century as they
>relate to Part 97.

What is "blatenly" [sic] obvious is that subjectivity is ruling Kelly's comments.

US amateur radio (rather than the "Part" number which wasn't always "97") has had such "regulatory lurches" such as the "incentive plan" licensing scheme to establish 5 license classes (more than other countries' number at the time), the "vanity call" system whereby long-timers could appear to be very-old-timers and therefore "expert" (1x2 calls such as "W3RV" for example), privatization of all radio operator licensing (both commercial and amateur), the VEC Question Pool Committee ability to pick and choose the questions for amateur exams, a continuation of no-further-testing renewal of licenses despite radio technology and radio regulation changes since the last license test taken.

Do all of those "lurches" sound personally unfavorable to Kelly?   :-)

>>Translation: "I don't like the way the trends are going, therefore
>>I don't pay any attention to them."   :-)
>>
>Horsepucky. I'll look at the curves in five years, don't bore me with

Then they won't be the trends of today, will they? Nice patronizing response...has a touch of the nobility about it...:-)

>>I also wrote a deliberate misstatement to see if Kelly understood.
>>The 2mm band is NOT the "largest bandspace allocation."
>>
>I assumed an innocent typo. You're so "clever" Lenny.

How could an "innocent typo" of "mm" and "5500 MHz bandspace" be so "innocent? The abreviation of "mm" is millimeter and is found on mechanical drawings. It should be pointed out that "5500" could not be compared with "4" as any typo, nor even "4000" if 'KHz' were substituted for MHz.

The US amateur band of 2 mm is allocated in all Regions. All amateurs should be aware of amateur radio regulations, yes? Or is that confined only to below 30 MHz and Extra class licensees? Perhaps it is such that "Gigahertz are for gigasquirts." [KH2D, three years ago, in here]

>>Kelly never defined anything specific about "spectrally efficient."
>>
>Definitipn: More stations in the same bandwidth. Duh?

Spread spectrum, specifically FHSS, a mode entering the rest of the radio world beyond the military ten years ago, can do this now, does it now. More stations in the same bandwidth. Duh 40 db over S9..

>>No doubt this would have to feature OOK CW codings.   :-)
>>
>Nope again Lenny. More selective vhf/uhf receiver front ends so that
>the FM repeaters can be packed closer together.

??? PLMRS was already going to narrower FM bandwidths a decade ago. They did not need just "more selective front ends" to accomplish that task. Hint: Private Land Mobile Radio Service operates on VHF/UHF. Hint again: Try to self-educate on frequency modulation and modulation index, "Carson's Rule" and other basic items concerning FM. [Carson's Rule has been around since 1922]   Basic things, not electrical engineering stuff

>... I'm waiting
>for the technical geniuses who had been previously prevented from
>getting on the air because they can't hack the code to strut their
>stuff and come up with radios which are more spectrally efficient.

"Strut their stuff?" :-)

Peter Martinez devised PSK31. G3PLX is not some newcomer (he was in a '74 issue of the RSGB monthly Radio Communication).

DSP techniques in and for specific amateur radio uses has been done by code-tested amateurs and non-code-tested professionals for years. See the 2000 Handbook explanation of one Jon Bloom.

How does "knowing" morse code (as in being skilled in its use) allow Extras et al to "strut their stuff?" Is that as in being able to show everyone else how an amateur operator, using 1930s standards and practices, can operate better than anyone else in the year 2001? Or maybe, just maybe that code ability really doesn't have any bearing on innovation or invention or adaptation of other-radio-service techniques to amateur radio?

"Strutting their stuff."   :-)   When was that ever stated by an NCTA? Oh, yes, stated by a PCTA to "explain" what the NCTAs were "really" saying. Of course. :-)

Could it be that all those new Technician class licensees (far more new Tech licenses granted than any other class combined, has been that way for years) just like radio and the new technology? Maybe they like LOS propagation and the short wavelengths? Maybe they aren't interested in beeping away the nights doing DX with strangers in foreign lands? Couldn't be! That's against all the hymnals and sermons of good and true amateurism of the beepers' youth!   :-)

You are correct there Jerry as much as they cried and whined Bush still came out on top after the Newspapers finished counting. Tom by what percentage did Bush lose the popular vote? Pretty miniscual wouldnt you say. Last time I looked this country elects presidents on electroal votes. Since the democrats had dead people voting and convicts perhaps we should have a recount .

No you shouldn't say that, it is New Jersey(Jerzee), perhaps if you knew how
to speak correctly you would be able to say the name of the state correctly.
Which state do you think we should model? Oh that's right you aren't from
the USA, what the hell would you know.
.

And since we are on the subject of headers:

It is time for my monthly disclaimer, in case any newbies have arrived since Leland's last folly with my nic and email.

.

KC8LDO Leland C. Scott forged the original post, it wasn't me. His number of aliases and forged posts and emails are staggering, but he especially likes forging me. Please check the headers. Leland C. Scott, KC8LDO, and Doug Adair, N8wwm, and their many, MANY aliases are responsible for ninety five point nine percent of the strife on the rec.radio.cb ng, and probably on many of your amateur forums as well, especially lately. A good number of posts appearing with no call signs have been easily identified as the same forgers in the cb ng.

Thank you all for the replies via email, as most were polite and well written, as were the many offers to assist me in attaining a ham license, however, I believe in returning things to their rightful owners, so any additional correspondence should be directed at the author of the forged post and troll.

After exposing Leland for forging me over a month ago with the assistance of another licensed amateur, he has waged a personal vendetta against me.

He searched the web and found an article I wrote on freebanding for a hobby magazine over a year ago and has posted it numerous times in an effort to justify his own behavior towards myself and other cbers. He draws his own inferences and hurls unfounded accusations and insults. Leland's main line of defense has always been attack his accuser, no matter who it may be. If anyone would dare suggest Leland may be wrong, he has no defense other than to attack about "What you did" and it is usually a lie (from questioning one's sexual preference to threatening them).

He has repeatedly accused me and others of pirating on amateur frequencies, and nothing could be further from the truth. I understand how an amateur could feel so strongly as to defend his allocated frequencies, but attacking countless individuals behind phony names, forging people, forging email headers in his posts, throwing accusations left and right and refusal to remove anything personal and not on subject off the ng exemplifies what this particular individual and his two cronies are about. He also reported me to my ISP for "forging" (the gall) and was so certain it was me that he made many posts threatening that I was about to lose my internet service. When he received word it wasn't me from my ISP, this sent him into a rage, as it did when I first exposed him. He has accused me of forging for so long (pot, kettle, black) he now accuses my ISP of "lying" to him. I guess the more Leland decides to forge me in your amateur forums, the more frequent I must point out the error of his ways.

I asked Leland and "Sparky" to take whatever personal problem they may have with me to email and I will be glad to debate whatever merit they see fit, but as all will see, these two are more interested in calling names, perpetuating problems between operators and will not cease their childish games....hence the crossposts They don't WANT the strife to go away. I apologize that they feel the need to make you all a part of it, and I was going to ignore most of the emails and what was forged of me, but then the email I received from amateurs was so far from what I expected. Leland forged me and posted that article in a manner to which I would be flamed, and instead, I received email from a great number of amateurs who didn't flame at all.

Quite the opposite, many offered to assist in getting my ticket, and for that I thank you. Turning the tables, if it had been me that were a licensed operator and someone posted an article about freebanding in an amateur format I frequented, I may have been one of the flamers, but as I said, the reaction from amateurs across the land was quite different than what the original author intended. If a post appears to be from me in anything other than the cb ng, please check the headers....if it has any other path than this one, it is a forge. All emails answered. Have a good day.

The only reason its wrong is the reason you do it ... you don't execute to
give others a reason not to commit murder but out of revenge plain and
simple ... americans are typically hostile and vengeful people ... it's in
your nature ...

>      Not to mention repeating it six times in one post.

Just wanted to make sure you got the point

>      Guess the rent-a-cop business must be slow in Canada these days.

Actually I'm working for Lapp Hancock Telecomms now ...

Cecil, It is much easier to catch speeders.
First Fact How many vehicles are on the road?  It is like crapshooting.
Talked to a State Trooper today at 4:00pm 1/2 way thru his shift he had
written 14 tickets. Why because there are many asshole breaking traffic laws
daily, and there people out there enforcing the Law. How many people use the
freeband? As compared to the minute number of FCC agents enforcing the Law

This is an example of the problem that is currently plaguing the amateur
community. It is analogous to:

I started my car with a hand crank, so you should learn this method before
you can drive an automobile. Some people collect antique cars that are
started with a hand crank. This is their choice, and I respect their choice.

CW is analogous to a hand crank. It is no longer necessary. Just because you
consider it a personal accomplishment does not justify why all amateurs
should learn CW.

There are many professional engineers (myself included) that share this
opinion. You will get no empathy from me.

-jim

    This is your opinion.  Nothing of substantial fact.  And besides, there ARE
some people who ARE alive today that are "proof" that capital punishment DOES
deter capital crime.

>Just wanted to make sure you got the point

     Actually, you just looked foolish.  THAT you accomplished well.

>Actually I'm working for Lapp Hancock Telecomms now ...

     Congratulations.  Guess things are slow there, too.

> With the feeling that some people have toward the ARRL, are you certain that the ommission was an error (vs. intentional - to serve its political agenda or that of its members)?

"Erring in omission" is not an error per se. It means leaving out some item of information for whatever the writer had in mind. There are many and varied rationales for such in professional journalism but it seems a fairly constant device used by most nationally-oriented fraternal orders.

The way I see it, and have seen it for a half century, the ARRL is simply boosting itself, wherever it can, however it can. There's nothing wrong with boosterism of congratulatory self-praise, but sometimes it gets way too deep. :-)

Let's take the ARRL opening page's article on the 40m band. At first glance it would seem that IWG-6 is the "only" "advisory committee." Actually no, it is, as stated later, an "informal working group." According to the article, Walt Ireland of the ARRL is "chairman." Not quite. Ireland is Vice-Chair and Larry Miller is Chairman (absent during the April 16 meeting). According to the article, the ARRL's Paul Rinaldo was the only presenter but there were two others mentioned in the meeting minutes, one by telephone and the other being the President of the National Association of Shortwave Broadcasters (NASB). The NASB in concerned with the 4 to 10 MHz part of the HF spectrum.

The title of IWG-6 (there are 7 in all) is "Public Protection and Other Issues." An IWG does not set everything but advises the IB of the FCC. However, never fear, the ARRL is "on the job" and will protect everyone's interests because ARRL personnel are the only ones written up in the article... even a League "representative" to a CITEL meeting to be held in the near future.

Errors? Not really. Judicious rewording and omission of those facts reported elsewhere. Pecking order misnaming at this "advisory committee" can be explained due to the absence of the real Chairman, etc., etc., etc.

The end result of judicious and clever wordcrafting is that the ARRL can be shown as the "only" group looking out for US amateur radio.

Harken back a few years to the "Little LEO" NPRM. If one would read the ARRL "news" it would seem that only

the ARRL "defeated" it. Going to the FCC it would seem
that there were about two dozen others commenting as
much and more which contributed to the defeat. According
to ARRL news, the ARRL "did it all." Again, clever judicious
use of error-of-omission made the ARRL a self-proclaimed
hero. That's bad journalism but very good political spin
doctoring. QED.

Good, you accomplished something. And so you know how it feels. Mike has accomplished something and you piss on his shoes and tell him it is raining.

1. Accomplishment is personal and relative. If one happens to be two, jumping off the first step and not falling on your diaper is an accomplishment.

2. As it happens, I am one of those old fogies at 57 coming up on 46 years in the hobby who happens to agree that the days of code testing are over. An era will have passed when it goes but eras have passed before and will again. Mike merely indicated that he had a bit of the sense us old turds have when it does -- much like outgrowing your Little League baseball glove.

3. At no point did Mike opine that his accomplishment meant everyone had to do it and for what it is worth, as a coded Extra, neither am I. You are reading something into it that was never said and not intended. Scratch your personal problems with the code on someone else's leg; cats have been drowned for less. Perhaps the chaplain is holding a two-for-one sale.

>It's none of your business.

     Sure it is.  The electromagnetic spectrum is a resource for ALL of us.
People who arbitrarily "take" over it's use without consideration of who they
may be interfering with are a problem.

>What do you care if a pirate operates or not?

     See above.

>Fact is, you don't like the conservative right view, it has nothing
>to do with the station being illegal, you just want to shut up the view.

     There are lot's of outlets for almost ANY political view.  Operating a
"clandestine" radio station gives some the aura of being a "patriot".

>Typical liberal, instead of turning the dial, instead you want to turn the
>station off.

     THIS I can agree with.

Unfortunately, I think we all tend to get wrapped around the axel over this code/no code business. My main concern has been the general dumbing down of requirements in general (both inside and outside of amateur radio). No one seems to want to learn anything technical (sheesh, if they don't have a calculator or cash register, a lot of people even have a problem making change!). You should see the mess I get to work with. Any amateur that has been around and actually learned something should know something about grounds - and ground loops. Finally, at work some brilliant individuals (after some prodding - I won't do that again, it gets one in trouble) decided to start bonding things together inside of the panel boxes. Forget the National Electric Code - hey, that means you have to learn something. Programmable ladder controllers used to loose their marbles quite often - as often as three controllers in any given 12 hour shift! I had warned them about their safety circuits. Hmmm ... all software (not totally tested, of course). One guy got 12 stitches in his hand when a turntable took off with a guard door open! Then they wanted me to rewire it. Nope. I am not an expert on the National Electric Code, but those tiny little relays (which weren't wired properly anyways) wouldn't cut it. They tend to fail quite a bit in other applications. Contacts stick together (hey, they bought 'em cheap!) ... you name it. We need 90 PSIG air since the pallet lockup cylinders do their whole job over about 1/4 inch with two line contacts - and the cylinders are about the diameter of my little finger; meanwhile, on a bench line, we have to push a six ounce product about four inches into a chute. Little cylinder, right? How about a two inch bore? One operator got pinched by that once. That had to hurt - I know I can't pull the thing back against its' force (what's pi? Apple, pumpkin, or what. Of course it is irrational, math is irrational).

This seems to be the mode that we Americans are operating in. I hope I'm wrong. The amateur test is a joke. Same with the commercial ticket. I dropped my tickets (1st phone, telegraph, and amateur extra) back around 1980. I decided to pick them back up in 1993. They were simple. How simple? Well, when I tested for my GROL, I was informed (remember, I had not studied at all for any of this and it was new for me) that I could also take, at no extra charge, the Global Marine whatchamacallit thingy. Ok, but I didn't even know what it was. Guess what? I failed that by exactly ONE question. One question kept me from being considered as 'qualified', even though I didn't squat about the subject.

Of course, we can just continue to purchase Japanese goods - but just what are we hoping to accomplish with amateur radio? Is it truely a 'training ground' for people to develope a decent background in communications and electronics, or are we engaged in a race to the lowest common denominator?

Forgive the length of the post. I know the argument is CW forever vs CW never - but what do we want? I should hope we are not trying to exclude as many people as possible, yet something here just doesn't make good sense to me. (no, I don't see the need for CW either, I'm just concerned about the rest of the tests)

10-4, good buddy?
;)

73 from Rochester, NY
Jim (please don't take offense, just consider what I am wondering about)

I think this is great, Jim. Perhaps you could help me build a list of
the amateur requirements which are necessary. (Probably ought to just
stick to the inarguable ones.)

73, Jim AC6XG

    Not to mention that most states didn't count their absentee ballots
because they wouldn't change the outcome. Most of those were from our armed
forces that voted almost 3 to 1 in favor of Bush, that could have made up
most of the "popular vote".

Some of us may not like hearing it, but that's how it is. I guess it will take a tie with Jessie Jackson before people wise up and field better choices.

 Sounds like it was more than just tolerated. Did that 'other' Moore
know about this?

I'm embarassed at the quality of candidates we get with this system. I
can't understand why some people feel good about barely squeeking past
Gore, like that is a major accomplishment!

We are lucky Jesse Jackson didn't run, he would have probably won.

Cecil:

The only thing I recall without reviewing the episode "Space Seed" is
that there was a CW beacon coming from the spaceship Botany Bay;
I don't remember the text. In the episode, however, Lt. Uhura reads
it aloud as "CQ, CQ..." and Kirk, who obviously felt that proficiency in
the Morse Code was a valuable skill for 23rd Century Starship
Captains, confirms the same. Obviously, Kirk and Uhura wern't no-coders.

Hansl:

I think the figures on the higher rate of lapse among the "legacy"
classes can be explained quite easily. The more effort that was
expended to attain full (Extra-class) privileges would tend to create
a more active and successful amateur experience -- leading the
ham to value his privileges more highly. Those who got involved
and licensed at the lower privilege levels, but without a genuine,
ongoing interest, naturally became distracted by other interests
and allowed their ham tickets to lapse. Of course, some of the
Extras, being no-coders at heart, didn't want to have to go through
the Morse code testing "hazing ritual" again, so were inclined to
renew their expiring licenses whether or not they were active at
the time -- as a hedge against future renewed desire to stick an
HF microphone in their face and blow hot air into it.

I don't want to see this point go unchallenged. The vote in each state is completely tabulated. To say otherwise is supreme ignorance. Every vote was counted, and was submitted. It is a fact that Gore won the popular vote, but it is also true that this is immaterial to winning the Presidency.

Americans do not vote directly for President. They vote for Electors. The candidate with the most Electors wins. The popular vote is an interesting count, but has no bearing on the Presidential election. It is equal in importance, to the

count of voters complaining of constipation, in relation to
those who have syphilis.

Finally, Bush won the Republican party because he had the
most money. There were other good candidates, but Americans
froze them out of the process by not contributing to their
campaign. Both parties received a fraction of the total votes
possible. More than 50% of voting age Americans never went
to the polls. These same 50% always whine about the result.

Yawn....this whole line is a bore... you win Tom, have a nice life with old
blow-job BillC!!! I'm gone...!!!

de Jerry -n6jp-

>Your sense of humor sucks as bad as you sense of perspective.
You need to get a life away from thinking Republicans are better
than anyone else..or more moral.

Although it was intended as sarcastic humor, you must be aware
the Republican in Atlanta heading the "crusade" to get Clinton
disbarred for having sex (or whatever) has resigned because he
was caught a second time exposing himself in a public park and
soliciting a young male undercover cop for sex.

Where is Newt? Gone, because he was poking a woman on his
staff.

Frankly, Republicans and Democrats are both very poor examples
of what out public servants should be like. Now go away and stop
bothering me with this silly "Republicans are moral" crap. You can
pretend whatever you like, but don't fault me if you don't like the
>facts.

Evidently that was changed, to what new scheme I cannot determine.

Dick

Thank you. And, brilliant of you to finally realize that. I would make the
guess that you seek expert opinions, of which there are many and easily
accessible--in other venues than this. I would express the opinion that you
find Larry Klose's opinion not only lacking in expertise, but also
objectionable to you. Since I do not know much about you or Larry, of
course, that is only my opinion.

Kim W5TIT

PS--Just for the record, I have won three cases in a court of law thusfar. Two pertaining to UCC and one in Civil Court. Your Subject Line is quite appropriate :).

>

Oh, it wasn't up to him. It's just that his "friends" in the oil business know that he'll never use price caps nor controls. They couldn't care less that the extortionary oil price increases will be cause of Bush being evicted in four years. No matter- their additional billions will already be banked and Bush will be fully expendible and ousted at the polls, the economy trashed by universal inflation caused by the fuel price increases which impact *everything*.

So in the midst of record high profits by oil companies, and no sign of anything approaching a REAL shortage of petroleum products, just that allegation by those making the profits, prices rise to record levels (by collusion, no doubt). Nary an 'Out of gas" nor "limited to 10 gallon" sign to be seen (as in '73 when there was a REAL shortage).

Just today, radio news sources "within the oil industry" say that now the pipelines are again full, the 'shortage' is abating, so prices should start to come down, "Except on the West Coast and Midwest where there are special circumstances".(?) Of course, "down" will be somewhere around $1.50-1.75, which was exactly the objective of the entire exercise- get the prices up without just raising them "arbitrarily". (gotta have a 'valid' reason.) Fools that the pubic are, they'll never know what happened.

Sure wish we had a real political party in this good ol' USA. The Demoncrats turned out to be fools and the other side, crooks. Oh, the Clintoon admin. was able to work it both ways.

Or maybe the reverse. News reports (not generally reported by the liberal part of the media who almost universally supported Gore) say that millions of absentee ballots were NOT counted, ever, some 3 million in California alone, simply because they could not affect the outcome in the state in which they were cast. Absentees historically favor conservative candidates. So it could easily be that the popular vote is never going to be known accurately.

And you may ignore another fact, if you wish, but I live in a state where the Democratic machine routinely steals elections in metropolitian areas, and gets away with it. So it happened this time, too, with plenty pf press coverage that wss unavoidable under the circumstances, and do you *really* believe that the Democratic administration installed by that fact will proceed to do a proper job of investigating?

Why bother with D and F-student stuff like that
when there's so much that's infinitely superior
to listen to on shortwave?

(Listening to R. Netherlands Music 52-15.)

Nope, he had already sold out to an Oakland, CA conglomerate. The 70's
in CA were something else. I was sitting on the sidewalk in San Francisco
one afternoon waiting for a rock concert to open at the Cow Palace. Cops
were walking around keeping the peace. Half the people waiting in line
were smoking marijuana right out in the open and the cops just ignored it.

So why are you worried about people knowing Morse code, Larry? If they
were still using it in the 23rd century, you don't have anything to
worry about.

Actually, the opposite:  Because of the effort involved, those with the higher
classes who haven't renewed probably did not do so because they're 6' under.

We all have different recollections particularly when we're musing about experiences of decades ago. And once more the ham radio of 1963 was quite different in many respects from 1953. I don't recall the nitty-gritty details of the Novice test. What I do clearly remember is that going from scratch to actually getting a signal on the air as a 1953 Novice was overall involved a lot more work and/or relative expense than the average nocode has to put into it today. The writtens were only one of pushups one had to go thru to get on the air.

>

The bottom line is, at least where I'm coming from, is the collection of factors which affected the growth of ham radio, the comparison between then and now as they relate to a prospective young ham deciding if the pushups were/are worth it to become a ham.

>

"Liitle" issues like the Novice non-optional code test, getting an HF antenna up, etc. and all for a dismally restriced set of priveleges in spectrum space nobody else nobody bothered with for the most part all played roles my contention that the old Novices had it tougher than the nocodes have today.

>

What's it take for a nocode to get on the air today? Pass a test given at a local ham club VE session, drop $150 on the counter of the local Radio Shack, pick up a mag-mount antenna, plug it all together and bingo on the air with a microphone.

>

Woulda been incomprehensible back then.

>

Dropping the CW requirement will not change your ability to use the mode one bit. Why would you be annoyed?

Clinton was a friend of no one except Red Chinese and Criminals. But most homosexuals were too stupid to see that and kept voting for Clinton the Terrible anyway. I guess, among other things, homosexuals' brains are in their ass.

Sorry, didn't mean to attack you personally Mike; I just have
little sympathy or empathy for people who believe that everybody
should have to suffer every misfortune that befalls them. I'm
particularly sorry you share my allergies ;o).

I agree with you 100% Ross. I just wanted to point out that
the guy who's running KSM,UPR,whatever-he-calls-it Radio
is a dangerous nutcase. All one has to do is listen to him and
see this guy needs a heavy regimine of Zoloft or Prozac, if not
complete incarceration in a mental health facility. I'm sure alot
of people have reached this conclusion already. I also know
that all his broadcast rantings are being taped. He'll be made
an example of before too long. Check out the links below to
see just who's behind this kind of radio

Where exactly did I suggest that I was pro-cw or anti-cw? Pride of accomplishment is just that. nothing more, nothing less. And I don't look for empathy from you, I'm not sure where you got that idea.

Weird days when someone catches flack for saying they understand another's viewpoint.

I have no problem with DWI laws. I do have problems where
speed limits are set lower than anyone rationally drives. I have
never suggested allowing unlimited speeds...although there
are certainly highways in the west that can and have had
only "reasonable and proper" as the limit.

The problem is that the safety nazis want everyone to abide by
their version of what is or should be safe. None of that
crowd trusts anyone as an individual.

That statement alone tells me you are very pro-government and
have little or no respect for individual responsibility unless it is
"enforced" by government.  Pretty sad.

Cheers,
Bill K2UNK

>majority (over 50%)

Neither did Clinton, gaining only about 43% of popular vote when he was first elected and something like 48/49% for his second term.

As others have noted, the system that counts is the electoral college process...and that's not likly to change because smaller states end up with diluted power if the electoral college ended.

Cheers,
Bill K2UNK

The statistics are totally contrary to your claim. Highway
deaths continue to go down each year inspite of increased
speeds...70+ on many western highways as the posted limit.

>> Nope, the national 55 in effect for some 15 years had NOTHING to do

>> per year are STILL dropping.
>
>What source did you get that info from?

National Motorists Association. Indeed, this has
been reported almost every year when the stats are
announced. It is something the lower speed limit
proponents hate to hear.

>> Many states it is now 70 or even 75. In NJ people routinely
>> drive 70-75 everywhere on the highway...totally ignoring
>> the posted 55 or 65 limits.
>
>And New Jersey (Joisey I should say) is a state to model after?

NJ highway deaths have gone DOWN also. The reality
is that NJ is probably in the middle to low end of state
speed limits as many states have 70 and higher limits with
concurrant higher average speeds.

Cheers,
Bill K2UNK

Because I've put in the time and effort, and it will be dropped for others. That is pretty simple and just plain human. Who wouldn't be? I won't begrudge the new hams anything though, they are just taking the test in force at the time of their exam, just as I am taking the tests available in my own time.

About 8 years ago the FCC changed the process and now does
NOT issue new expiration dates for licenses that have upgrades,
address changes, etc as they once did. Unless the FCC makes
changes again, the date your license expires will not change until
it is renewd for a subseqient 10 year period.

If thetreaty changes in 2003, I predict the USA wil
change within 6 months or less. WRC 2003 is scheduled
for June of 2003 as I recall.

What's scary is that only about 1/4 of registered voters
voted for Clinton.

And Kennesaw, Ga, which has a law requiring every house to
have a gun, has the lowest crime rate of any city its size
in the country. The crime rate dropped 89% after the passage
of that law.

Thanks for the insights! Technology, or rather the lack thereof, once demanded that anyone entering the hobby have certain skills and knowledge so it was completely reasonable to test for those skills and knowledge. The "need" for those skills and knowledge was real, not artificial, so it was palatable. Tests were a minor hurdle when one had to design and build their own station - a reward and source of pride in itself - then use Morse to make contacts before building expensive "modulators".

But what was normal and acceptable back then is incomprehensible today. Passing a test, particularly a Morse test, has become *the* primary hurdle now that one can buy a whole station and operate it with less skill than a typical video game. Worse, much of the test, and especially code, no longer has any valid purpose. One can buy and operate a modern station without knowing the difference between a Hartley or Colpitts oscillator and without knowing a bit of Morse. And even worse, certain selfish hams long used those artificial hurdles to keep others off "their bands".

Progress is sad in a way. Whatever pride there is in buying an appliance station is tiny compared to having built your own gear in a time when not one person in 1000 could do so. Too bad new hams will never know that feeling but forcing them to memorize info they'll never use won't bring back those feelings; it only creates resentment.

So, looking at my above posting, would you say my renewal date was
6-18-1996, my change of address happened on 8-14-1998, and my upgrade
happened on 6-1-2000?

Except for my conditional exam back in 1952, all my ham exams have been effortless. The worth of a ham license resides with the privileges granted by the license. Your privileges probably won't change when the code requirement is dropped. Even though I passed a 13wpm code exam, it didn't bother me at all when the code requirement was reduced to 5wpm. Times change. Requirements change.

Well Ed, the paper is obviously white and I'll bet if you get an itemized list of ink use from the printer, more black ink is used than any other color. :-)

Bingo. Us OTs can gather at the local Rusty Zipper club and tell war stories each other understands about the gimlet-eyed FCC lady. The 5wpm brigade will have their war stories and are welcome to them. About the only thing we have lost is the audience for our war stories. What else is new?

When the 5wpm notice and order came out, I will admit to having a devalued sense -- for all of about 38 seconds until reality set in and perspective was regained. Mike is in that sense worse off than those of us who did it years ago, who wants to be the last casualty of a war grinding to a truce? Which is why I tried to give the guy asking 'when' a reasonable and civil answer. Morse is like scots whisky or sauerkraut -- no one likes them the first time.

After one has done it - at any speed - the view from the back of the mountain is a bit different. The process is like playing Nintendo with my nephew, a hand-eye coordination exercise learned by doing and not a lot else. The kid cleans my clock as well he should. One learns by doing it until it is a reflex; it doesn't respect age, intelligence, money, white teeth, or coolitude. To a competitive person this is the height of agony but for some silly reason there are 300k+ people on the licensing lists who have done it. When one has done it, he has a sense of achievement and like my nephew he should. It is right up there today with being the Duncan Yo-Yo Champion of PS182 for cosmic importance but an achievement it be.

The hobby will lose part of the glue that holds it together - the knowlege that the man on the other end did, at some speed, suspend ego and belief and learn the bloody code. It will not be an easy shift; the fact that egos are never suspended is one reason CB is a wasteland. The fear of the OT that the whole thing will turn to garbage is to some degree well-founded. We will live in interesting times. This happened because of history; whether one would include a code test given a clean sheet of paper in 2001 is another story.

Mike, welcome to the fraternity of those who have paid the price. If nothing else, a coded license will give you the right of pontification for the rest of your life as well as the warm glow of achieving an objective over time. That some have an overblown emotional problem with Morse is not your problem nor mine.

Could be.  But part of the problem is that the FCC has exactly nothing to
```

gain, this time, by doing it. They do not administer code tests and it
saves them nothing whatsoever. Given the emotion from both sides, I would
suspect they will let the rule-making process grind on.

Old Biker says:

>Progress is sad in a way. Whatever pride there is in buying an
>appliance station is tiny compared to having built your own gear
>in a time when not one person in 1000 could do so. Too bad new
>hams will never know that feeling but forcing them to memorize
>info they'll never use won't bring back those feelings; it only
>creates resentment.

Sorry, but that tale just doesn't wash in the name of "progress".

Every new ham is licensed to build their own station, just like
we were when we became licensed. Therefor the technical test is
just as valid now as it was then; not an occasion for resentment
any more than it was then. I could easily make an argument that
the technical test should be more difficult than it was then, simply
based on the advances in technology -- "progress" if you will.

The QCAO members will just have to deal with that, like they
have had to since the first license tests in 1912.

Ed Hare, W1RFI says:

> I have appended the text of the 1963 Novice Study guide.

.. clip clip clip ...

>34. What factors are commonly responsible for harmonic radiation and
>what practical means can be used to detect and correct such condition?

Ed,

My 1954 version of the Novice study guide is *exactly verbatim*, except it only has 33 questions. Guess the 34th question (about harmonics) was added somewhere during those intervening 9 years.

I would suggest you forget the echo completely when getting on the ham bands. It may please all the 12 year olds and those who think like 12 year olds on cb, but it doesn't fly on ham radio.

I agree, been a *long* time since I actually built a radio but the
technical skills & insights I gained back then still holds me in good
stead when I have to do the soldering iron to fix some glitch or
another. I just dove into an MFJ tuner and butchered it with the
soldering iron and some junk parts to get it working on 160. How many
of today's button-pushers would have clue one?
>
The techncal tests promote education which is a worthwhile objective
and they've proven many times to be to the benefit of the ham. Even if
they to have to get off their butts and learn something. God forbid.
>
Of course the educational benefits are are not the reason for the FCC
technical tests. They're out there to at least take at a poke at
minimizing the amount of damage hams can do with their broad technical
freedoms to occupy spectrum space with Lord knows what all these
days. Considering the huge advances in technology over the years there
is much more potential today for technical no-clues to generate
mischief than there was back then.

You, sir, assume too much. And you know what happens when you assume. I, for one, do happen to obey speed limits as well as frequency ranges and power contstraints. But thanks for your concern.

Don't take it too hard. Some folks simply can't comprehend what it must
be like to drive without constantly paying attention to potential hiding
places for cops rather than the road itself.

That's not completely correct. I believe that the time limit is about 4 years. If I went and 'established' myself on that land for long enough and no one said anything about it, then while I may have been there illegally in the beginning, I do have a legal right to be there, and the courts in Texas will back me up on it. I'm not sure if it falls under homestead or imminent domain, but it is the law, at least here in Texas. I know of people who have lost several feet off of their property line in this very same manner.

W1RFI asked:

>Dropping the CW requirement will not change your ability to use the
>mode one bit. Why would you be annoyed?

I think for some folks it's similar to "seeing something on sale for 50%-off, after you just paid full retail". Maybe not a 'rational' reaction, but certainly an understandable one.

Unfortunately, my technical skills don't do a thing to help my
inherited tremors. I'm dangerous with a soldering iron.

I know where you were going with this, and I agree, but we have several 12 year old ops in the Chattanooga area, and they are some very attentive, "professional" sounding operators.

After 30 +/- years in and working with Civil Air Patrol's cadet program, I have come to believe that almost any adolecent who is given some responsibility and allowed the opportunity to "run" with it will do rather well.

There are/were many hams who selfishly demanded that everybody
be made to pass the same tests they did and they did it so
stridently and successfully that Morse testing kept "CBrs" and
others out of the hobby for decades after it had outlived any
nonrecreational usefullness. Thanks to them, we failed to cash
in on the CB craze and must now compete with the internet and
other media for survival. Thank's to them we habe 100s (1000s)
of "Freebanders" who should have been attracted to Ham DX but
were instead turned into outlaws not supporters. Thanks to them
our hobby may well die, but they don't care; they used code to
keep "their bands" for themselves until *they* died or retired
and who cares after that? Certainly not those selfish SOBs! All
they ever really cared about was me, me and me!

So IMHO "understanding their viewpoint" is like understanding"
Hitler's viewpoint. I believe both are evil and deserve no
"empathy". YMMV.

James,

I see where both you and Dick McCollum are coming from. I, too, am not happy about the "dumbing" down of Amateur Radio--and society in general. (Why is it so hard to teach people to make change manually?)

As most everybody here knows, I build screwdriver antennas and advertise only occasionally. When I first started doing this, I had Extra Class hams coming back to me saying my antennas don't work. HUH? Checking them out, I found not ONE single fault with the antennas, but checking their installations, I found many mistakes--such as faulty grounds, antenna installed so coil was BELOW top of vans and right up against the metal, inpedance matching omitted, etc. I was amazed to find that people with higher class license than I hold (Advanced) had no clue about antennas..one fella mounted the base directly to the metal (shorted) with no insulators! He wondered what those little "donut thingys" were for!

CW is not the real issue for me. What I dislike is the lack of learning incentive in the new scheme of things. The emphasis is on jumping thru a "hoop" (memorization) to be able to TALK! And talking is the ONLY reason for getting a ticket. What I appreciate about my license is that it enables me to discover a new lesson almost every day, and I spend as much time, or more, experimenting as I do on the air. Many experiments are a failure, but I STILL learn something from it. I consider myself a perpetual "newbie" realizing I don't know it all, so I spend time with my hobby reading, tinkering and "blowing up" stuff to find out what makes it tick--like the clocks I used to take apart as a kid. I could not wait for Dad to give me the old alarm clock that quit so I could take it apart or make a "tractor" out of it. Smart about electronics, I'm not, but I *do* have an insatiable curiosity about radio--and that will keep me busy for the rest of my life.

JAMES HAMPTON wrote:
>
> Unfortunately, I think we all tend to get wrapped around the axel over this code/no code business. My main concern has been the general dumbing down of requirements in general (both inside and outside of amateur radio). No one seems to want to learn anything technical (sheesh, if they don't have a calculator or cash register, a lot of people even have a problem making change!). You should see the mess I get to work with. Any amateur that has been around and actually learned something should know something about grounds - and ground loops. Finally, at work some brilliant individuals (after some prodding - I won't do that again, it gets one in trouble) decided to start bonding things together inside of the panel boxes. Forget the National Electric Code - hey, that means you have to learn something. Programmable ladder controllers used to loose their marbles quite often - as often as three controllers in any given 12 hour shift! I had warned them about their safety circuits. Hmmm ... all software (not totally tested, of course). One guy got 12 stitches in his hand when a turntable took off with a guard door open! Then they wanted me to rewire it. Nope. I am not an expert on the National Electric Code, but those tiny little relays (which weren't wired properly anyways) wouldn't cut it. They tend to fail quite a bit in other applications. Contacts stick together (hey, they bought 'em cheap!) ... you name it. We need 90 PSIG air since the pallet lockup cylinders do their whole job over about 1/4 inch with two line contacts - and the cylinders are about the diameter of my little finger; meanwhile, on a bench line, we have to push a six ounce product about four inches into a chute. Little cylinder, right? How about a two inch bore? One operator got pinched by that once. That had to hurt - I know I can't pull the thing back against its' force (what's pi? Apple, pumpkin, or what. Of course it is irrational, math is irrational).
>
> This seems to be the mode that we Americans are operating in. I hope I'm wrong. The amateur test is a joke. Same with the commercial ticket. I dropped my tickets (1st phone, telegraph, and amateur extra) back around 1980. I decided to pick them back up in 1993. They were simple. How simple? Well, when I tested for my GROL, I was informed (remember, I had not studied at all for any of this and it was new for me) that I could also take, at no extra charge, the Global Marine whatchamacallit thingy. Ok, but I didn't even know what it was. Guess what? I failed that by exactly ONE

An man I knew gouged patients enough to buy a farmette in the country. It came with a veggie garden, rabbits and chickens. The previous owner had cruelly kept the rabbits in cages he called "hutches" but the good doctor let them run free. They were (predictably) killed and eaten by his dogs, who at least had enough sense to know what rabbits are good for. The eggs had to be thrown away because the stupid chickens deficated on them! So he got rid of the chickens. He also threw all the root veggies (eg carrots) away; after all who'd eat carrots, etc., that'd been "soaked" in dirt?

Sorry but I don't want people that divorced from reality electing others to pass or enforce laws that I must obey, even if they are basically intellegent. IMHO we should invoke the same laws once applied to slaves and Indians: votes from people living in cities should only count for 3/5 of a real persons' vote.

Old Biker says...

>So IMHO "understanding their viewpoint" is like understanding"
>Hitler's viewpoint. I believe both are evil and deserve no
>"empathy".

In my personal -- constitutionally protected -- opinion, the
current technical examinations are only marginally adequate to
protect the RF environment from damage by ill-prepared users.

It is my further personal opinion that any presumptive twit
who suggests that my viewpoint is "evil" like Hitler lacks the
level of native intelligence and good manners we might normally
ascribe to a rabid possum.

You are right and the solution is obvious. Determine what
percentage of hams currently do *not* design and build their own
xmtrs and reallocate that same percentage of each and every ham
band to a new service for "Appliance Hams"; which has
essentially no technical nor Morse testing but is restricted to
"type accepted" COTS transmitting equipments.

Keep the remaining parts of each band for "Amateur Radio
Engineering"; upgrade the technical tests to include all new
technology every 5 years, make them as comprehensive as 1st
Class Commercial tests, and require retesting for license
renewals.

Of course, these "Amateur Radio Engineering" bands would be
Morse only ... ;o)

You didn't! My reply was to the person I was quoting in my message.
And he certainly seemed to think so

I'm reposting in case you missed that part

____
Jim Wayda wrote:

This is an example of the problem that is currently plaguing the amateur
community. It is analogous to:

I started my car with a hand crank, so you should learn this method before
you can drive an automobile. Some people collect antique cars that are
started with a hand crank. This is their choice, and I respect their choice.

CW is analogous to a hand crank. It is no longer necessary. Just
because you
consider it a personal accomplishment does not justify why all amateurs
should learn CW.

There are many professional engineers (myself included) that share this
opinion. You will get no empathy from me.

Back to your post:

> So IMHO "understanding their viewpoint" is like understanding"
> Hitler's viewpoint. I believe both are evil and deserve no
> "empathy". YMMV.
>
> KA3DWW

What is it with people immediately playing the "Hitler" card these days? Its a big stretch equating pro cw people to him. And it really diminishes your argument.

The fact that all hams are being licensed without being able to communicate in the most basic level of radio communications, that of on-off keying of a carrier using a basic aplphanumeric code. It's skipping a 'troublesome' step in the basics.

Otherwise, enjoy!

De Hans, K0HB

News Release:

QCAO Reorganizes

The Quarter Century Appliance Operators was founded in the early 1950's by a small group of Amateur Radio operators from the Pacific Northwest. They had been active in their hobby for over 25 years, yet still lacked the basic knowledge of radio electronics and had no idea of how their equipment worked.

They banded together to try and protect each others honor and pride. At radio gatherings and club meetings in the 1950s one was considered unworthy of the name Ham Radio Operator if he or she couldn't not only name components, but know how to solder them together and make a radio work, or fix a broken set!

When faced with insults and dreision, those few hardy pioneers banded together and formed the First Chapter and National Organization of the QCAO. This was known as the "Cold Solder" Chapter. They even coined the now-famous club byword "e pluribus ignoramae" which is Latin for "We don't have to know how to solder, we just wanna talk on our radios."

No veterans of that first chapter are known to be active on the air today. In the late 1950s and early '60s, with the worldwide interest in science and space and technology, the QCAO membership went underground.

It is with great pride and dignity that today in the 21st Century the revived QCAO stands ready to rise from the ashes, and become the standard of mediocrity it once proudly was. In honor of those first pioneering members, QCAO hereby invites all eligible applicants to step forward and join!

The benefits of QCAO include not only the pride of membership. Think of the warm glow you will feel at club meetings and gatherings showing off your new all-plastic imprinted QCAO pocket protector! And that's not all! For your minimal membership fee, you will also receive a handsome, suitable-for-framing, certificate of honor, with hand-lettered name and Charter Membership Number. Other QCAO memorabilia will soon be available for members, including T-shirts, caps, pins, etc. At this date charter membership numbers are still available.   Membership requires a 25 years (more or less) interest in Amateur Radio, coupled with a basic ignorance of how radios work and how to repair them.

Think of meeting other QCAO members on the air! No more embarrassing pauses when someone in the QSO mentions an RF choke or a parasitic bleeder...Be able to exchange meaningful sharing, talk about real things, yes, even swap QCAO numbers with each other! And soon perhaps . . . a worldwide QCAO contest!

You no longer have to shrink to the back of the room at post-meeting sessions of your radio club. Just display your QCAO protector and others will be able to identify you immediately. Who knows? Perhaps one of the originals from that old QCAO Chapter is just waiting for you to find him. Join now! Remember "We don't have to know how to solder, we just wanna talk on our radios"! Don't let technoids embarrass you and kick jargon in your face. Stand up for what's right! Join QCAO!

"e pluribus ignoramae"

That seems like the most logical explanation of the dates which
matches your known license history.

Hans, it's no myth. 200 years ago, on the frontier, it took the
sheriff a long time to respond to a crime. Thus, citizens were
forced to be responsible for their own protection for a certain
length of time. The situation has not changed. It takes a long
time for the present-day cops to respond and in the meantime, a
citizen is responsible for his/her own safety and the safety
of loved ones. Every citizen needs to be armed at least as well
(and preferably better armed) than the criminals he/she is
likely to encounter. In any area, world-wide, where guns are
required by law, the crime rate is very low. Would you break into
a private residence in Switzerland where every male is required
to have a military rifle ready to fight with?

It works both ways. Some people can't comprehend the peace of mind
that you have when you don't care where the cops are hiding.

All you have to do is go a little slower then all those other
drivers, that are looking over their sholders for cops, and the
cops won't pay any attention to you. In the end, does it really
matter whether you get there a minute or two before me? If you
get there first, do you win? If so, what do you win?

You need teo realize, Mike, that these CW haters have chewed on their bile for years, some for decades. Don't expect anything except abuse and rancor from them. They don't have a clue and never will have.

Sure they do, they gain simplified rules and a permanent end
to the code test debate.

>Given the emotion from both sides, I would
>suspect they will let the rule-making process grind on.

Given the simple rules change, I see a much shorter public
response time-frame and if the treaty is changed, there will
be an immediate RM request to have the FCC institute a
rules change to get the process moving.

Cheers,
Bill K2UNK

That's going a bit too far. Novices didn't all "design and build"
their own complete stations, in fact very few did. Particularly we
didn't all build our own receivers in any big volume. We usually used
the cheap swl (read: crappy which meant developing operating skills)
receivers or modified WWII military surplus gear which usually took
some work to get running in ham service. All kinds of mods to rcvrs
and transmitters were very common, back to the midnite soldering iron.
Transmitters quite often were another story and often very simple, a
single 6L6 oscillator coupled to hunk of wire and off ya went. There
were no "heroics" at all but all of it added up to much more
ingenuity, technical involvement and operating skill than we normally
see in today's enry-level ham radio. Hell, parts-scrounging was a
art-form.
>
>- a reward and source of pride in itself - then use Morse to

"Selfish" hams don't foist any regulations on us, the regulations are
written by the FCC and the ITU who erected the "hurdles". Most of the
rest of the world's other country's seem to agree with FCC plus or
minus. Tell them about it.

To hell with "pride" "Pride cometh before the fall." There's no way in
hell I'd trade my current collection of whizzy digital radios for that
utter CRAP I had to put up with when I was a Novice. My only point is
that the two good things I got out of having to deal with those crap
radios were the non-optional development of some technical smarts and
operating skills. I'm still exercising both today in profusion.

If Kelly wishes to be told a "truth" (that is incomplete) then he is free to exist in ignorance.

As of about four years ago, the major source of current US amateur radio "news" was the ARRL Bulletin, W1AW transmissions (for those amateurs in good propagation areas, not universal among the 50 states), packet messages, and the beginning ARRL website. Less current were the publications, periodicals having about a two-month lag for "late-breaking" news but four to five months for regular articles. Unless one was in the communications law business or had connections through such a firm, or possibly visited the FCC reading room in DC, any other news came second, third, or n-multiple hand through other communications. That is where the ARRL excelled as a major purveyor of US amateur radio information.

Things have changed. US amateur radio news is now carried on many venues, some very current, some not. Examples: The new look to the QRZ website which is becoming a serious challenger to the ARRL home page news; Ham Radio On-Line, the RAIN Report, newsgroups, public access to the FCC, NTIA, Department of State by anyone with a modem and computer. Anyone so equipped can peruse the websites of CITEL, EURO, the ITU itself (within limits of what they make available free of charge to the public). The decade-old public-access Internet has opened up vast new areas of information which are free for the access. There is no longer a "need" to access a limited "official" membership organization but those who wish to be spoon-fed selected information are welcome to be so "informed."

Less than an hour's searching here uncovered an interesting bit of information on S25.5 relative to WRC-03:

An NTIA draft proposal for the US adminstration's position on ITU-R agenda item 1.7, dated 10 April 2001, states that the US administration should seek to "suppress" (eliminate S25.5). That is available in NTIA's document 1345 found as a link on the FCC's IB page, one of three such documents pertaining to WRC-03.

The NTIA explanation for this is their statement that the suppression of S25.5 was sought at WARC-95 but tabled (read 'stonewalled') by the IARU's request for coordination among IARU members due to their every-three-year meetings. [the IARU has no vote

at WARCs or WRCs, is technically an observer and
is also rather hand-in-glove with the ARRL] We now
know that the "policy" of the ARRL is to do "nothing"
about S25.5 according to the ARRL release of the
last policy meeting. Has the ARRL stated openly
that it requested tableing of the S25.5 through the
IARU? Did the IARU web page (at the ARRL site)
say so? How many radio amateurs are acquainted
with this bit of recent history in detail?

Note: The NTIA does not regulate any civil radio in
the USA but one of its chartered tasks is to
analyze and report on spectrum use by both civil
and governmental radio users. The NTIA has no
vested interest in amateur radio. The NTIA is part
of the US voting administration team at WRCs.
The ARRL and the IARU have no vote at WRCs.

Kelly is free to say anything he wants but it seems
rather odd that suppression or omission of facts by
the largest US amateur organization is a good
inducement to membership, PAC or SIG or whatever.

Is the receipt of "news" so written to be what the
membership wishes to hear a good thing? I don't
think so. It is certainly not accurate reporting.
Some would call it "mind control" but that is a bit
too strong for certain morse-codified members.
Let's call it "soothing syrup" verbiage for those who
will never need be concerned about tests or
"qualifications" in their lifetime...if they renew
every ten years.

..clip, clip, clip.

> Would you break into a private residence in Switzerland where
> every male is required to.......

I wouldn't break into a private residence *anywhere*, so your question
is moot.

And both your assertations are pure bullshit anyhow, because I am
certain that in both cited locations there are laws restricting the
ownership of firearms away from any number of classes of innapropriate
citizens such as convicted 'violent' felons, mentally infirm, etc.,
as well as dispensations for religious or personal moral objections.

"Every house" in Kennesaw and "every male" in HB9 -- urban mythology,
Cecil, pure and simple!

Come on back when you have a believable story to tell -- this one is
a comical hoot, even below the low credibility standards of r.r.a.p.

Nope...archived facts. Located in northern Cobb County, GA, Kennssaw STILL has the lowest per-capita crime rate of almost any other municipality in the metro Atlanta area.

As for the law itself, seems to me that this clearly falls into the "ounce of prevention" negating the need for a "pound of cure". I seriously doubt that the majority of homes in that area really do COMPLY with the law, however I would not want to be the one to find out if they do or not!

Often the "low" speed limit is due to accident experience, the presence of schools, high pedestrian/bicycle traffic, and unusual circumstances like a high senior citizen/handicapped population.

>The USA population routinely exceeds highway speed
>limits and the police don't care one bit.

In Radnor Township the police care A LOT!. No, I haven't been ticketed - because I know how much they care.

Something about "fine Corinthian leather..."   ;-)

No, actually it was just "CQ". Kirk and Uhura could read it, of course.

Then there was the classic "City On The Edge Of Forever", where Spock has to "build a mnemonic memory circuit out of bear skins and stone knives" (or words to that effect).

But as good as that series was, the best TV to come out of the late '60s was the British miniseries "the prisoner".

Be seeing you!

>> Would you break into a private residence in Switzerland where
>> every male is required to.......

>I wouldn't break into a private residence *anywhere*, so your question
>is moot.
```

The question as it pertains to YOU is moot. The rest is fact. Every abled-bodied male in Switzerland has compulsory military training and maintains a weapon in thier home.

>And both your assertations are pure bullshit anyhow, because I am
>certain that in both cited locations there are laws restricting the
>ownership of firearms away from any number of classes of innapropriate
>citizens such as convicted 'violent' felons, mentally infirm, etc.,
>as well as dispensations for religious or personal moral objections.

I am sure there are "dispensations" for religious reasons, too. However, do YOU think that the person claiming such exclusion is going to put a sign on the door that says: "NO GUNS HERE DUE TO RELIGIOUS CONVICTIONS"...?!?!

PLEASE don't rob my neighbor who may have a firearm when it is SOOOOO much easier to rob me!

Yeah...right.

And felons and the "mentally infirmed" could care less about laws either way.

>"Every house" in Kennesaw and "every male" in HB9 -- urban >mythology, Cecil, pure and simple!

He didn't say that every house HAS firearms...just that it REQUIRES a firearm.

And every "able bodied" man, which I presume means those who are NOT convicted felons or "mentally infirmed", ARE required by Swiss law to undergo military training.

>Come on back when you have a believable story to tell -- this one is
>a comical hoot, even below the low credibility standards of r.r.a.p

And YOU come back when you get your head out of your butt and do a little bit of simple research. Facts, Hans...they are ALL facts.

Have fun with this one now, Hans!

73

>If Kelly wishes to be told a "truth" (that is incomplete) then
>he is free to exist in ignorance.

Coming from you, I am sure this statement is made from a position of prior experience.

>As of about four years ago, the major source of current US
>amateur radio "news" was the ARRL Bulletin, W1AW
>transmissions (for those amateurs in good propagation
>areas, not universal among the 50 states), packet messages,
>and the beginning ARRL website.

AND "CQ" magazine

AND "Newsline"

AND "73" Magazine

AND "Worldradio"...

>Examples: The new look to the QRZ website which is
>becoming a serious challenger to the ARRL home page
>news; Ham Radio On-Line, the RAIN Report, newsgroups,
>public access to the FCC, NTIA, Department of State by
>anyone with a modem and computer. Anyone so
>equipped can peruse the websites of CITEL, EURO, the
>ITU itself (within limits of what they make available free
>of charge to the public).

"Challenger"...?!?! Nope. Just another source. The ARRL is a MEMBERSHIP organization, and it's forcus is first-and-foremost membership matters. The other sources you cite are not.

By the way, judging by the number of inaccurate assertions you make vis-a-vis Amateur related matters, it's obvious YOU don't peruse these sites, either.

>The decade-old public-access
>Internet has opened up vast new areas of information
>which are free for the access. There is no longer a
>"need" to access a limited "official" membership
>organization but those who wish to be spoon-fed
>selected information are welcome to be so "informed."

Thank you Lennie the Licenseless for determining what a membership-oriented organization has the right to do or not do.

>An NTIA draft proposal for the US adminstration's
>position on ITU-R agenda item 1.7, dated 10 April 2001,
>states that the US administration should seek to
>"suppress" (eliminate S25.5).

Well gee-willikers, Mr. Wilson, where have I heard THAT before? Seems some feller in Tennessee has been saying that all along, but YOU have been asserting it's NOT a "happening thing".

>The NTIA explanation for this is their statement that
>the suppression of S25.5 was sought at WARC-95
>but tabled (read 'stonewalled')

Jump to.....

>We now know that the "policy" of the ARRL is to do "nothing"
>about S25.5 according to the ARRL release of the
>last policy meeting. Has the ARRL stated openly
>that it requested tableing of the S25.5 through the
>IARU? Did the IARU web page (at the ARRL site)

>say so? How many radio amateurs are acquainted

There's been a 6 year jump there, Lennie...(you are pretty rotten at math, for an alleged engineer).

So the League's change of policy in that period of time is some sort of "cover-up" or "conspiracy"...?!?!

>with this bit of recent history in detail?

>Note: The NTIA does not regulate any civil radio in
>the USA but one of its chartered tasks is to
>analyze and report on spectrum use by both civil
>and governmental radio users.

Wrong. Civil AIr Patrol and Coast Guard Auxiliary communications ARE controlled by NTIA and both, despite their "paramilitary" programs, ARE civilian organizations....

>The NTIA has no vested interest in amateur radio.

Wrong again. NTIA works routinely with ARRL and other Amateur organizations on spectrum matters since many of our allocations are jointly occupied by federal users, specifically the 70cm band, among others.

>The NTIA is part
>of the US voting administration team at WRCs.
>The ARRL and the IARU have no vote at WRCs.

True, but all work together for EVERYONE'S mutual benefit.

>Kelly is free to say anything he wants but it seems
>rather odd that suppression or omission of facts by
>the largest US amateur organization is a good
>inducement to membership, PAC or SIG or whatever.

I am sure he welcomes your acceptance of his freedom to say what he wants...especially since YOU are pretty good at supression of certain facts yourself.

>Is the receipt of "news" so written to be what the
>membership wishes to hear a good thing? I don't
>think so.

The League doesn't inform us of "bad things" going on? Little LEO, broadcasting incursions, etc?

They only tell us what we want to hear? Hmmmm....Seems I have read a few things in there I NEVER asked for...

>It is certainly not accurate reporting.

How would YOU know? You have very specifically stated that you do not subscribe to any Amatuer related journals.

Guess your two coffee cup buddies pass on thier old copies of QST or 73 to you? THAT'S real timely.

Guess you're just torqued over the fact that YOU can't get on to the ARRL's website, depriving you of the opportunity to arm yourself with stuff to make more of your spite filled rhetoric for FREE.

>Some would call it "mind control" but that is a bit
>too strong for certain morse-codified members.

Here we go...Morse Code is the culprit.

>Let's call it "soothing syrup" verbiage for those who
>will never need be concerned about tests or
>"qualifications" in their lifetime...if they renew
>every ten years.

Regardless of any tests I or any other Amateur may or may not need to take, any and all changes to the Amateur Radio service DO impact all of us, Novice through Extra.

And at this point, none of them effect YOU.

Go figure.

Suggest you check with a lawyer, it isn't that simple. Homesteading and
imminent domain have nothing to do with it.

We agree on the cause, we differ on the effect. Being that there is no budgetary gains to be made except perhaps by taking the opportunity to eliminate Advance, Plus, and Novice classes in their entirety, it would seem that the object of the exercise is to pluck the goose with minimum hissing.

There are some issues here: the present exams as Hans points out are really not adequate, there will be those ready to pounce to do everything from widening the phone bands to outlawing CW completely. Your own group opines in properly Yuppie language 'no protection for legacy modes'. The Commission will be inundated by RM petitions an hour and five minutes after the WRC chairs cool. To squelch debate by unilateral action is just not politically wise if you are the FCC. My congressman sits on the House Commerce committee with Billy Tauzin; you can depend he will know my feelings. So I expect the Commission to allow the debate to run its course; in the interest of getting it over with permanently.

Of course if the Commission uses the opportunity to correct a number of post-Restructuring stupidities and save itself the dinero from 3 license classes, the whole shebang is up for grabs.

There is, of course, the possibility that the code test will be ended by fiat leaving things in the breeze. I just don't think the Commission is that silly. The Amateur Service is too unimportant to expend the political capital on what is a fairly trivial and non time-essential issue.

>From: "JAMES HAMPTON" j.r.hampton@worldnet.att.net

> My main concern has been the general dumbing down of
>requirements in general (both inside and outside of amateur radio).

Inside of Amateur Radio, the requirements have not been dumbed down since the days I took my exams. The entry level exam of my era was the Novice, containing 20 questions. The study guide for that exam was 4 pages. The entry level exam for today's era is the Technician. The exam contains, if memory serves, 30 questions, and the study guide for the exam is over 200 pages. For my General, I was given an exam that required a study guide of 16 pages. For that, I was given all Amateur priveleges. Today, to obtain the same, one must take the Tech, General and Extra, with about 500 pages of study guide.

I will add that when I studied those 16 pages, with studying being a combination of learning, memorizing and lucky guessing, I felt I had climbed a mountain.

> Any amateur that has been around and actually learned something should
> know something about grounds - and ground loops.

There were no questions about ground loops on the General exam I took in 1964.

Cecil is a person who speaks clearly, and means what he says.

In both examples (Kennesaw, GA and Switzerland) he said "every", without
qualification or modifier.

What part of "every" does the jarhead not understand?

Cecils declarations are both ludicrous on their face!

Good luck on this one now, Jarhead.

It's true, and the law worked. I lived in the Atlanta area for 8 years, and the law was well known there, but didn't get much publicity elsewhere. I'm willing to bet that if the law had produced an increase in accidental gun deaths, CNN (Clinton New Network) would have made sure everyone in the world knew about it.

>>>from Camp Evans (later to become Evans Signal Laboratory), NJ,
>>>outside of Fort Monmouth, NJ. On 111.5 MHz.
>>
>>Yeah, Len, I read about that in 1964. They used a converted SCR-271 radar -
>>the same kind used at Pearl Harbor in 1941. Hardly "state of the art" in
>1946.
>
>Delete the word "converted" and insert "highly modified."

Why? Jack Mosefson wrote "modified", not "highly modified". The receiver was designed by Major Edwin H. Armstrong (ex-GS) who gave the world regeneration, superregeneration, neutralization, the superheterodyne, practical FM and FM stereo multiplex, and lots of other things. He also designed the 1BCG transmitter used in the 1921 Transatlantic Tests.

>The project was begun in September 1945, was
>experimental.

The project got its name and funding then. But as Mofenson writes in his article:

"Prior to entering the Signal Corps, Colonel DeWitt, who at that time was the chief engineer of Radio Station WSM in Nashville, designed and constructed transmitting and receiving equipment for the purpose of of receiving echoes from the moon. This equipment used substantially similar transmitter power and frequency to that used by the Signal Corps, but the attempt was a failure due to insuddicient sensitivity of the receiver. Colonel DeWitt's appreciation of the problem and personal supervision were the driving forces that made the present experiment successful."

DeWitt was better known to radio amateurs as W4ERI and W4FU. His pre-Signal

Corps work was done in May, 1940. Amateurs had a band at 112 Mc. then.

>There was not a great deal of funding
>for experiments in the immediate post-WW2 period.

There was enough to pay several good people to work on Project Diana.

>The 64-dipole "bedspring" antenna (24 dbi gain) was left
>over from wartime work.
>

The original antenna was only 32 dipoles. Attempts to bounce a signal using it failed. W3IYF (E.K. Stodola, head of the research section) and others in the research section decided that if the antenna size were doubled (by adding 32 more dipoles), the 6 dB path gain would be a decided advantage. It was with this enlarged antenna that successful echoes were heard.

>>111.5 Mc. is not an amateur frequency, and wasn't one in 1946. What does
>>Project Diana have to do with amateur EME?
>
>Project Diana is the first, repeat first, moonbounce
>demonstration.

SO? The discussion wasn't about who was first. I knew about Project Diana 36 or so years ago. I read Jack Gould's book.

> Someone had to be first. In this case
>the US Army Signal Corps was first.

Obvious. No one disputes that.

Does this mean that no other acomplishments in EME are worth talking about?

>correct "diamof." My error.

Admitting your errors is the first step, Len. It's a healthy thing. Now try this: If a Technician licensee passes Element 1, (5 wpm Morse code) and gets a CSCE for doing so, does that Technician licensee have any HF amateur radio privileges? Previously you said that Technicians don't have any HF - "CSCEs or no CSCEs". Was that earlier statement an error?

>

Been there. Done that. The whole site is neat.
>
>>>Project Diana was done 55 years ago.
>>
>>So? It was a moon RADAR experiment, not a communications system.
>
>Not according to Jack Mofenson, one of the civilian experimenters.

Sorry, Len, that's another error.

The title of the Mofenson article is: "Radar Echoes From the Moon". Note the first word: RADAR.

>There was no need to use RADAR (or radar) to find the moon.
>Astonomers already knew were it was, is, would be.

Then why the word in the title? It wasn't a communications system.
>
>The whole point of Project Diana was to use the moon as a
>REFLECTOR of radio waves as a supplement to the irregular
>ionospheric conditions of HF.

That was only one of the purposes of the experiment, and it was pretty far down the list. Quoting Mofenson:

"The practical implications of RADAR CONTACT [my emphasis] with the moon are numerous. During the war the Germans used the V2 Rocket which climbed some 70 miles above the earth, and the future holds the unhappy prospect of missiles going far higher than this. The matter of transmission of radio signals to great distances above the earth for detection and control of such weapons becomes a problem of military importance. Further, the use of a reflector far beyond the earth for radio waves makes possible direct measurement of the ability of radio waves to penetrate the iononsphere. A more complete investigation in this direction is indicated. The possibility of using the moon as a reflector for a part-time long-distance point-to-point communication is also being considered, as well as using the moon as a target to measure field strength patterns."

Mofenson refers to the system as "radar" and says the result was "radar contact" and "radar echoes". Was he in error, Len, or you?

>This is clearly stated in Jack
>Mofenson's article copy on the (corrected) web address given.

Yes - it's clearly stated that it ewas a radar system, not a communications system.
>
>Note: One can get a link from www.campevans.com/diana.html
>to the Mofenson article copy...it is given near the bottom of the
>"/diana.html" page.

Been there, done that. Fun stuff.
>
>>...   How many taxpayer dollars were spent on that project?
>>What would that be in today's money?
>
>:-) How is that relevant except to open up yet-another thread
>of diatribe about "wasteful government spending?"

Did I say it was wasted? Not at all. Another one of your errors, Len, if you
think that way.

I think it was money well spent. Plus the use of an old obsolete prewar radar
set for a new use was typical ham radio ingenuity.
>
>Project Diana was done FIFTY FIVE YEARS AGO.

Then why bring it up? The discussion was about a couple of hams who were doing
2 way communications via EME using an exciting new mode and low power ("QRP"
means "low power" to hams, Len). Big parts of their rigs were homebrew, too,
like the software-defined 2 meter transceivers used to drive the transverters.
That transceiver was in QST.

> No doubt
>that somewhere in a warehouse there are records of
>accounting dating back to 1945-1946 concerning Evans
>Signal Corps Laboratory (part of the triad of Coles-Evans-
>Squire Labs that I passed many times just outside of
>Fort Monmouth, NJ, in 1952).

How is that relevant? The point is that the government spent taxpayer dollars
and supplied lots of resources far beyond those available to the radio amateurs
of that time.
>
>If OLD records are "so important," why not go into a separate
>thread on the wanton waste of WW2 radios that were sold as
>surplus to civilians beginning in 1946.

How was it "wanton waste" to sell them to civilians? Civilians paid for them to
be developed and manufactured. They were no longer needed. Lots of stuff was
sold as surplus back then, not just radio sets. Much of it had been built for
the invasion of Japan, and became surplus when Japan surrendered.

>"Command Sets" and
>BC-358s were very popular items back then

BC-358s? I don't know that set. I've owned BC-348-Rs and a BC-342-N, and even a
BC-14. I know lots of other common surplus stuff but not the BC-358.

Could it be that you made a mistake and meant BC-348?

>...to hams that
>were in existance then.

And for many years afterward. Until a few years ago they were common
flea-market items, available for a few dollars.
>
>How many taxpayer dollars were spent on those surplus
>Command Sets where brand-new-in-the-carton receivers
>could be bought for $6, transmitters for $12, antenna-
>coupler and modulators for $18?

I don't know - probably millions. The military decided they were not worth
warehousing and auctioned them off as surplus just to get rid of them. Anyone
could bid on the various surplus lots. Was that a bad thing?

The point I was making was that the SIgnal Corps team members were paid, and
did not spend their own money on their equipment . Hams are not paid, and they
have to finance their own stations in most cases. BIG difference.
>
>>Wrong. The mode used was OOK CW. The echoes were heard as beeps. Had >there
>been a second station, communication could have been done by Morse.
>
>What would be the object of using morse codings in a REFLECTOR
>experiment?

Communication. But it wasn't a communication experiment.

>The original "keyer" was mechanical, later replaced
>with an "electronic keyer" variable over a 0.2 to 2.0 second "on"
>time.

Yes, I know. What of it?

> That's not the highly-touted/prized/triumphantly-presented
>greater-than-20-WPM copy-in-the-head sort of environment said to
>be the ultimate achievement in amateur radio (according to PCTAs).

What ARE you blubbering about, Len?
>
>>No Morse was used because no communication was done. There was no second
>>station to communicate with.
>
>Yes, and Heinrich Hertz, "fooling around in a lab" never pioneered
>anything about EM waves, either. :-)

Who said that? Not me.

> [but he did use Spark]

So?
>
>>> The US Army Signal Corps personnel,
>>>including civilians of Evans Signal Labs, didn't need amateur radio
>>>licenses or passing code tests to make them "qualified."
>>
>>Who said they did? We're talking about amateur radio, not the

>>military-industrial complex.
>
>"MILITARY-INDUSTRIAL COMPLEX" in 1946?!?!?   :-)   :-)   :-)

Yep. The term was not used then, of course, but that's what it was. Do you know
who made up the phrase?
>
>>Those Diana folks had a some hams involved, though - all code tested at at
>>least 13 wpm:
>>
>>Lt. Col John H. DeWitt, officer-in-charge, W4ERI, ex-W4FU
>>E.K. Stodola, head of the lab's Research Section, W3IVF
>>F. Elacker, Mechanical Engineer, ex-W2DMD
>>H.P.Kaufmann, W2OQU was also involved at a high level.
>
>Oh, wow, yes, cribbing from a later ham publication source.

Is the information incorrect? Were the above not radio amateurs?

Where do you think I got the above information, Len?
>
>Oddly, the Jack Mofeson article copy doesn't mention ham
>licenses.

No, it doesn't, even though all of the above had them. What's your point?

>The OIC, Col. DeWitt, is described as "former
>chief engineer of WSM."

He was also W4ERI and ex-W4FU.

>Of course, McGraw-Hill's
>Electronics biweekly wasn't oriented towards amateurs. :-)

Biased against them, I'd say. Like you, Len.
>
>>They used power levels 9 dB above those permitted to amateurs at the time,
>>and an antenna that was quite beyond "backyard construction". They had lots
>of
>>resources.
>
>Scrap. Left-overs.

Swords into plowshares. Typical ham radio ingenuity and resourcefulness. Works
for me.

>Evans Lab didn't erect that tower to do
>Diana...it was already there as was the bedspring.

The big antenna needed to be doubled in size to get the job done.

And most hams don't have stuff like that available.
>

>>Lt. Col. DeWitt, W4ERI, was the driving force behind the whole idea, which
>he
>>first began working on in 1940.
>
>Really? Mofeson's article says that Project Diana "began" in
>1945.

It also says:

"Prior to entering the Signal Corps, Colonel DeWitt, who at that time was the chief engineer of Radio Station WSM in Nashville, designed and constructed transmitting and receiving equipment for the purpose of of receiving echoes from the moon. This equipment used substantially similar transmitter power and frequency to that used by the Signal Corps, but the attempt was a failure due to insuddicient sensitivity of the receiver. Colonel DeWitt's appreciation of the problem and personal supervision were the driving forces that made the present experiment successful."

> Mofeson must be in error then, right?

No, Len, you are the one in error. Again. See what Jack Mofeson actually wrote.
>
>>>Have NCTAs claimed that the code test was a "barrier" for the
>>>"technically knowledgeable?"
>>
>>Yes. Many, many times.
>
>Error. Faulty memory.

Truth. Actual claims.
>
>Firstly, there is NO valid necessity for a code test except in the
>personally-possessive, do-it-like-I-did-it attitude of the PCTAs.

The FCC thinks differently. Tell it to them.
>
>Secondly, the code test TURNS AWAY those, certainly those
>with previous radio experience, from bothering with a license
>test involving morse code.

That's just another way of making the claim that the code test was a "barrier" for the "technically knowledgeable?"
>
>>Nonsense. It has been a rallying call of many nocodetest advocates.
>
>Delusion, rationalization.

That's what you're doing all right, Len.

> The FCC said that morse code
>ability was not of use in determining licensing of radio
>amateurs. In 1990 as well as in 1999.

No, they didn't. They said it was a test of morse code skill, nothing more or less, and was still required because of international treaty. They dismissed all other reasons for continuing the code tests.
>
>Is the FCC guilty of some "rallying call?" I don't think so.

I have no idea what that is supposed to mean.
>
>>By your standards, no radio amateur has ever done anything of technical
>value
>>in radio, Len.
>
>Error. Incorrect. False charge.

Nope. A valid opinion based on reading many of your posts here over the past 3-1/2 years.
>
>Insofar as the ENTIRE RADIO WORLD is concerned, the state-
>of-the-art of all of radio has NOT been much improved since the

>wavelengths.

Really? I don't think so.

>The resulting proof of long-distance propagation
>prompted more research into HF by academics, industry, and
>the military.

Yup. Hams led the way then. They still do, in some ways. Has any other radio service used the moon for 2 way long distance terrestrial communication?

> Radio astronomy got its essential start through
>the efforts of an experimenter who was also a radio amateur.

Yep - I know.

>[radio astonomy has not yet proved to be "communications"
>in the N2EY absolute definition...:-)]

What does that mean?
>
>>I already know when all three of the above were done by hams. Do you?
>
>No.

Go look it up.

>I've only sent commands to a station on the moon and
>received a "reply" from that. :-)

So? The Soviet Union did that first. Path loss to a device on the moon is far less than for EME.
>

Exactly. Big difference.
>
>>They used Morse code for the 2-way QSO, too. Is that the problem?
>
>Why does N2EY ask?   :-)   :-)   :-)

Because you seem to denigrate anything hams do. You compare self-funded
spare-time experimenters to taxpayer-funded professionals and have nothing but
contempt for the former and praise for the latter.
>
>>What does any of this have to do with the excellent achievement of W7SZ and
>>W7LHL? Nobody claimed their achievement was the first EME contact.
>
>Someone had to be first.

Is the one who does it first the only one that matters?

>Were these two radio amateurs the
>first amateurs to do moonbounce? [excuse me, EME in the

Oh, goodie, an old-timer who can swing a 100 W American
Beauty to solder two wires together. A real "clue" that one.

How is the "clueful" one on surface mount technology?
Can he "butcher" some SMDs in the same manner?

Gotta love this...all sorts of tales of surplus and Novices
doing the midnight thing with irons to do "all those mods."
Most of it is bullsh*t. Most Novices way back when
didn't have a clue. They were clueless. Some learned
more...other than soldering skills. Some dropped out.
Some stayed in, got other class licenses. Some
stayed in for life and remained clueless to the very end,
loudly proclaiming their "expertise."

>The techncal tests promote education which is a worthwhile objective
>and they've proven many times to be to the benefit of the ham. Even if
>they to have to get off their butts and learn something. God forbid.

FCC tests are just regulatory tools for the FCC. They aren't "technical tests" of any academic kind.

>Of course the educational benefits are are not the reason for the FCC
>technical tests.

Really?!? Did the nature of the FCC's regulatory task finally sink in? Good for Kelly.

>They're out there to at least take at a poke at
>minimizing the amount of damage hams can do with their broad technical
>freedoms to occupy spectrum space with Lord knows what all these
>days.

The FCC knows "Lord knows what" in their OET. Check 'em out. [God forbid any Extra actually learning something...?]

>Considering the huge advances in technology over the years there
>is much more potential today for technical no-clues to generate
>mischief than there was back then.

Kelly can get on the amateur 2 mm band and "mess up" 7 GHz of spectrum bandspace if he wants. Or experiment. Or communicate. Even in CW. He is "qualified" even if a total noclue on bands above 70 cm.   :-)

>Tighten up the writtens . .

The QPC does the question and answer generation nowadays. The FCC merely specifies the number of questions per element and minimum number in the pools.

Contact the nearest neighborhood QPC and tell them how to do things in no uncertain terms! I'm sure they will appreciate being told all about how amateur radio testing should be done.

The FCC Budget is now released. Where is the evidence that
any "budgetary gains" were to be made by not simplifying and
restructuring?

>There are some issues here: the present exams as Hans points out are really
>not adequate, there will be those ready to pounce to do everything from
>widening the phone bands to outlawing CW completely.

The FCC merely specifies the number of questions per test
element and the minimum number of possible questions in
the pool. If there is a dispute with the type, kind, quality of
questions, please contact your friendly neighborhood QPC.

The greatest fear seen is the paranoia over "outlawing CW

completely." False fear...but it seems the only possible
rejoinder to eliminating the code test.

>Your own group opines
>in properly Yuppie language 'no protection for legacy modes'.

What is "properly Yuppie language?" Please educate the
audience with some examples so that all may share the
wisdom of a few.

Radiotelephone is a "legacy mode," is it not? Is there any
test for radiotelephone skills in a separate operator test?
Has there ever been one? How about "legacy modes"
other than CW?

>The
>Commission will be inundated by RM petitions an hour and five minutes after
>the WRC chairs cool. To squelch debate by unilateral action is just not
>politically wise if you are the FCC.

More "insider" information. Amazing the depth and breadth of
wisdom among the old-timers.

>My congressman sits on the House
>Commerce committee with Billy Tauzin; you can depend he will know my
>feelings.

This sounds suspiciously to a modified schoolyard challenge:
"My congressman can beat your congressman!"   :-)

All US citizens are free to contact their elected representatives
in the Congress. Even now, before the IWGs are finished
"advising."

>So I expect the Commission to allow the debate to run its course;
>in the interest of getting it over with permanently.

It is normal in all US radio services for the FCC to issue an NPRM
on any regulation changes, inviting Comments. The FCC will then
study all Comments, making all public record, then decide in the
following R&O. All of it public. Why would there be any change
from that procedure?

>Of course if the Commission uses the opportunity to correct a number of
>post-Restructuring stupidities and save itself the dinero from 3 license
>classes, the whole shebang is up for grabs.

Please explain the "post-restructuring stupidities."

>There is, of course, the possibility that the code test will be ended by
>fiat leaving things in the breeze. I just don't think the Commission is
>that silly. The Amateur Service is too unimportant to expend the political
>capital on what is a fairly trivial and non time-essential issue.

Tsk, tsk, tsk, cynical-chic to the bone. :-)

Is a group of 680 thousand US citizens "trivial?" What "political capital" expenditures are done in any radio service? Part 15 radio services? Part 90 radio services? Part 95 radio services? Part 97 radio services?

The FCC must consider the wishes of the citizenry. All of them. On any radio service. Since 1934 they have managed a fair job of that, all things considering. The FCC is no longer swayed by an almost-monopolistic ARRL influence, something they learned with the 98-143 NPRM.

Problem is that some old-timers who got nice little federal merit badges and "credentials" are now throwing hissy-fits because of loss of status. The TS card punching line starts over there to the right...

In article <3af9abee.278230185@news2.dvol.com>, kelly@nospam.dvol.com (Brian Kelly, w3rv) writes:

[on WRC-03 agenda/info searching]

>Ya mean ya spent the best part of an hour dorking around with that?

Not "dorking around." I'm involved with two other radio services. WRC-03 may change that, may not. Since WRC-03 may or may not change S25, S1, or S17, that information was available.

Do I understand Kelly that he wants amateur information
pre-digested, sorted, and sanitized for his amateur tummy?

[on the NTIA being involved in WRC-03]

>Why in the name of God would a toothless frequency coordination
>advisory group give a bleep about ham rado code tests?? Unless
>somebody in that group has an "agenda" of course.

The NTIA is PART of the US administration representation
at WRC-03. Neither the ARRL nor the IARU has any voting
capability at WRCs.

The NTIA is not "toothless." They coordinate government
frequency use and also act in concert with the FCC on
spectral allocations for various radio services. Only some
long-timers, clueless because of being fed pre-digested
information are "toothless."

[on the NTIA draft for WRC-03 in document 1345]

>Sounds to me like the IARU sandbagged NTIA. Works for me.

Gum it all you want if it makes your mouth better.

The IARU appears to have pulled a nice bit of sandbagging
of the code test issue. "They needed to coordinate with
other members." For three years. Involved in communications.
The US administration, more concerned with other radio
issues, was either unconcerned or got voted down at WARC-
95...full minutes aren't available to non-subscribers at the ITU.

Please consult with the ARRL-IARU. The ARRL got into
co-chair position in IWG-6 at which Paul Rinaldo seems a
"permanent presenter." Both are ARRL troops.

Agenda anyone? It is not cynicsm to see the "loading" at
an IWG of the FCC IB, coincident with a serious error of
ommission of IWG news at the ARRL home page.

[on the code test issues since WARC-95]

>I sure as hell am.

You should be now, but past public statements of Kelly
are to the contrary.

>You're really obsessed this NTIA outfit aren't you? Have you noticed
>yet that nobody else in this NG gives a bleep about NTIA?

Line up behind McCollum...I'll punch Kelly's TS card as
soon as possible. Whether or not anyone in this newsgroup
"gives a bleep about NTIA" is irrelevant. All who are interested

in the future of any radio service should be aware of their existance and charter. Those who "don't give a bleep" can go gum their pre-digested information and have tummy aches when they don't get the right information vitamins.

The voting members of the US adminstration at WRCs consist of Department of State, NTIA, and FCC personnel. Neither the ARRL nor IARU have any voting privileges. They are observers and "advisers," nothing more.

>The simple reality here is that it increasingly seems like the ITU
>won't bother addressing S25.5 just like they did last time and that
>prospect has your knickers in a terminal twist.

Wrong. My "knickers are twisted" by toothless old-timers who let a Big Brother do all the controlling, arranging, and information handling so that they can enjoy a hobby activity that seems to consist more about putting down "noclue inferiors." Chew on that.

Now go and invent more war stories of your struggles in first adventures with amateur radio, social interactions, and over-exaggerated amateur technology tales of the fifties. Don't worry, I'll correct you on technical gaffes such as "24 VDC" military jeeps in WW2 or "lots of mods needed for WW2 radio surplus."   After all, someone has to clue in the toothless. Chew, chew.

In my opinion the hidden cause is our being a signer of the CEPT agreement.
This excuse was already used as a reason to water down the code speed, as it
would make the U.S. require a test in speed different than the other CEPT
signers.

So, as soon as one of the other signers rolls over on the code, the U.S. will
follow without any PRM or comment period.

Good thought, listen to the citizens. Hmmm... lemme see, maybe there could be some MONEY in this idea. The FCC could sell free freebanders' licenses to Crackerjax, which in turn would triple their price on a box of Crackerjax and state that one out of 50 boxes of Crackerjax would contain a free FCC license to operate anywhere you want. Nice. As far as 'outmoded' modes go, you should probably go past CW and AM and throw in sideband also. It's been around since before the 50's. I recall about 20 years ago some companies (I believe in California) started increasing paid annuity pensions for men since they didn't live as long (ie; the companies were contributing more to the women with the same pay and length of service). The women's groups threw a fit and this was changed. I noticed in our local paper last week a woman is going to her congresswoman since her husband passed away. Seems he was a fitness nut, jogged, was a vegetarian, and was in excellent health; therefore, he did not buy down his annuity (I believe it was a bit over $3000 per month) for a joint survivorship. Then he developed cancer (after retirement) and passsed away. She now has nothing (except Social Security). I wonder why he didn't take out a survivorship on his annuity? A friend of mine retired some years back and I asked what he did - he had his wife sign off on the joint survivorship because it would have reduced the pension a HECK of a lot. Her life expectancy was considerably longer than his even though both were in good health. He decided on a big life insurance policy. He will find out the downside of this if he lives into his eighties. If Jane Doe and John Smith each work for the same company for the same number of years at the same job, both will have the same annuity - UNTIL they find out about the joint survivorship. If Mr. Doe and Mrs. Smith are to be covered with a survivorship, the Smith's annuity will be reduced more than the Doe's annuity simply because they figure what the single annuity is worth and then reduce it using actuary tables. What does this have to do with the thread? Just be careful of what you are wishing for, you might just get it.

73 from Rochester, NY
Jim

Yeah, I believe it is next to the line for the amateur radio op

wannabees. If you couldn't make a go of the "Extra out of the box" at
the 5 wpm level, maybe your chance will come in a couple of years.
Personally, I doubt you'll be entering amateur radio in this lifetime.

Why are you throwing hissy fits, Leonard H.--no merit badges or
credentials?

>
>Because you seem to denigrate anything hams do. You compare self-funded
>spare-time experimenters to taxpayer-funded professionals and have nothing
>but contempt for the former and praise for the latter.

Really? :-)   I was commenting on the 1946 Project Diana experiment as the first demonstration of the capability of the moon as a radio wave reflector.

N2EY wishes to have fame of amateurs noted above such experiments because those experiments were done by "tax-payer funded professionals." [hack, spit, ptui on pros]

N2EY bristles with righteous anger at anyone not of the amateur persuasion disturbing the self-delusions of radio pioneering. No problem. There's been precious little pioneering in radio by radio amateurs since WW2. Only the ones I named in a previous post...and those might be arguable. "Pioneering" is one of the chief articles of faith in an organization's publications, but the pioneering actually done was over a half century in the past. [Project Diana was done 55 years ago]

Why the antipathy demonstrated against professionals? In here. Elsewhere. Why?

Perhaps it is because all of radio is interesting as a hobby to those with a technical bent. Amateur radio is a hobby. Some like to immerse themselves so deeply that amateur activities become a lifestyle. That is okay with me, but why the constant anger and resentment against professionals [of the "military-industrial complex" greedily consuming hard-earned tax dollars of ordinary Americans?] for not wanting to share some obsessive-compulsive complex?

It certainly seems so in here. On one side are the stuffy ultra-conservatives extremely defensive in the preservation of the hobby started in their youth, holding to the status quo with all their might, fighting all usurpers, all the heretics threatening their belief systems. On the other side are those who want some freedom, lesser restrictions than the "official" viewpoints, even rebels who don't hesitate to stomp on old, outmoded ways. This other side views amateur radio as just a hobby. The first side seems to think that it is more than a hobby, it is a lifestyle that must be followed at all costs, holding rigidly to tradition and belief. The first side wants to lock in all possible hobby activities in unchangeable law. The second side thinks of it as just a hobby done for relaxation...with as much freedom as possible.

I am not going to argue endless fly-speck details of Project Diana. Yes, I did mistype the website...and corrected it. Is it important that the Diana antenna have such-and-so many dipoles? Apparently to members of the first side who must have exactness in every sentence. I'm of the second side who simply thought it was a fine pioneering thing done by anyone and had actually seen the Diana antenna and tower from a Fort Monmouth bus in 1952. No biggie at the time but the Diana project was definitely the first true demonstration of using the moon as a radio reflector.

Someone had to be first. In this case it was the greedy, "military-industrial complex" personnel actually paid (!) for their efforts...as if that were some major pejorative on anyone trying out an experiment or actually pioneering.

Some time ago elsewhere I made a casual mention of the US Army Signal Corps "starting US military aviation," more as a bit of gentle ribbing at some stalwart ex-USAF types. The amount of flak received was remarkable! "Couldn't have been true!" and "inconsistent with known reality" were the more gentle responses. :-) Just the same, the first heavier-than-air aircraft contract and delivery in the US military was let by and received by the US Army Signal Corps. Mistyping one character in that exchange meant the entire message was "invalid!" :-)

This seems to be the environment here. The "first siders" (the traditionalists, steeped in legend and glory tales) busy with fly-speck corrections, admonitions, and charges of "unprofessional errors" and "mistakes" that invalidate any viewpoint contrary to the first siders. :-)

>I thought you knew everything about radio, Len. Guess I was mistaken.

Oh, oh, a snarly comment! Shame! :-)

Never licensed in telepathy, I cannot know what N2EY is thinking. I have some capability in radio design, operation, testing, and theory...and am not afraid of destroying some cherished belief set by looking elsewhere for more data, especially in regards to radio regulations. I know that is a "crime" according to some, very much so in regards to amateur radio and its devotees of the "first side."

FB on the fly-specks, N2EY, my fly-swatter is tired. Let me clean it and have the big bat ready for next time. :-)

Len Anderson
Retired member of the evil, greedy "military-industrial complex"

"Now run along and play with your little friends, Dennis!" I believe
you have just completed the transformation to "Good Old Mr. Wilson",
Len. I also believe that you spend a great amount of your time dorking
around. You have to fill up those hours in some way. Your web-based
research must be a help in killing the hours that your lengthy posts

here don't take up. Maybe you should go for an amateur license. You could perhaps find some fellows on the air who might find your breadth of knowledge fascinating.

> Do I understand Kelly that he wants amateur information
> pre-digested, sorted, and sanitized for his amateur tummy?

Is this more proof of your lack of bias toward the ARRL? Is there any chance that the League rejected an article penned by you in the past?

>   [on the NTIA being involved in WRC-03]

You may be on to something, Len. The League board has likely met in secret session to get its story straight. The board has decided to keep

membership in the dark. What's your take on the Kennedy assassination
and the Warren Report?

>

Who put you in charge of TS card punching or of anything for that
matter? All in favor of Len Anderson being in charge of setting amateur
radio policy, say "aye". Damn! The "nays" have it.

> The voting members of the US adminstration at WRCs consist

The "clue" comes from knowing which two wires to solder together.

> How is the "clueful" one on surface mount technology?
> Can he "butcher" some SMDs in the same manner?

In your seventh decade, how good are you at handling SMDs, Len?

You really are an envious boor, Len. To sum up your paragraph above, no
ham ever did anything to amount to much. You've left no room for those
who really learned electronics, became excellent operators (regardless
of mode) or who turned amateur radio into a stepping stone to a career.
The question which begs asking after reading each of your posts is:
Why are you interested in amateur radio at all? What is your fixation?

> >The techncal tests promote education which is a worthwhile objective

No one gets any credit hours toward graduation but one would have to
have the IQ of a mushroom not to pick up a lot of electronics knowledge
simply by studying to pass such an exam.

They might prefer to hear it from some grump in California who has never been licensed but who is certain that he knows how things should be done in the amateur service.

There is absolutely nothing troublesome about it! Again, this is analogous to starting a car using a hand crank. You simply want new hams to undergo this hazing ritual because you were subjected to it! It's time to move on! Get over it before this hobby dies and amateur radio eventually loses more spectrum.

Why not replace it with a college hazing ritual that involves a jellybean?
... just joking :)

Jim, why do you have this hazing ritual hang-up? And better yet, why drag
the same old crap by people who have done it, most of whom have long since
adjusted to the idea that the day of code testing is over. Finally, what
makes you think our opinion, even should you sell the tired old arguments,
is relevant to the process?

Just who in hell are you trying to convince and why?

The circumstances you site constitute valid reasons why
a lower speed limit is not arbitrary. That doesn't change the

fact that there are other areas with lower limits that are
pure speed traps only.

>>The USA population routinely exceeds highway speed

Oh for Cry-Yi.... at the rate that stations are bailing out of SW, there
won't be anything left BUT pirates... if we get rid of them, there won't be
ANYTHING to listen to on HF.. and folks.. for those that seem sure that the
big radio corporations WANT the ham frequencies... all these Int'l broadcast
stations shutting down should show you that the HF bands are not
commercially feasible...

I can supply a long list of the  "noclue Novices" just in my crowd who
went on to electronics-based academic, gummint and corporate
acheivements so far beyond anything you've ever accomplished it's a
snicker Lenny. Ya oughta jumped in back then like we did Lenny, ya
missed yer ticket to ride. Novice ticket that is.
>

Yeah, I'm LICENSED to do that but yiu're NOT. Keep tuning for me
Lenny, but for God's sake don't transmit, you're not allowed to do
that. Just listen: That's all you're allowed to do.

Most of us. You think you're the only one who knows what's up??
Egomaniac ham radio "expert" in a ham NG with no ham license, gotta
love it. The political maneuver is akin to "letting the matter die in
committee". Done all the time Lenny. Once again this one works for me.

>
The simple and obvious fact of the matter in this case Lenny is that
S25.5 is such a weenie piece of trivia in the big picture that the
upcoming WRC most likely will not bother with it. As in they have more
important issues to handle within the limited timeframe they have to
deal with anything .
>
So of course that prospect just pisses you off no end Lenny, they're
probably once again gonna brush off the opportunirty for you to
achieve your lifetime "victory"over ham radio. Keep twisting Lenny,
whine, whine, rant, rant, ya just never know Lenny . .
>
>Note: The NTIA does not regulate any civil radio in
>the USA but one of its chartered tasks is to
>analyze and report on spectrum use by both civil

You have to remember that most "safety" related laws and rules are written for the lowest common denominator in society. Just because YOU can safely drive a car on a particular road at 70 MPH, does not mean that everyone else can. And since personal responsibility and prudent judgement seems to be at an all time low in this country, we have been more or less forced to have the rules dictated to us. It's a shame for those of us that feel that we're "better" than that, but the law is the law, and you do not have the right to arbitrarily disregard them. Organize a lobby, study and document your evidence as to why a particular law should be changed, and present it to the proper governing body, and let the process do its thing.

I am very much in favor of personal responsibility, and despise the
government meddling in my life. But you have to realize that there are a
great many peope in this country that are NOT responsible, and do NOT
exercise good judgement. It is THESE people that the laws were written
for. As long as people demonstrate that they could not behave themselves
if left to their own desires, then the government will have to regulate
them. This news group is a perfect example of why we need rules and
regs. Too many people operate potentially dangerous equipment with
little or no regard for other people's rights, yet they are the first to
piss and moan when the law bites them. It's hard to make a case in favor
of that type of mentality.

Let's hear it for progressive:

AM: dates from when someone plugged a carbon mike into the cathode keying jack of his MOPA and pronounced AUDDDDDDIIIIIIOOOO.

FM: Edwin Armstrong's contribution to civilized society give or take 1930.

SSB: Invented by the phone company before the war, sold by Art Collins after it.

RTTY: Old idea made to work on landlines by Teletype Corp in the 30s, and on radio by others. God, can you smell the machine oil burning. Good old Mr. Bow-dot's code has been supplanted by 117 things ending in TOR and of late PSK31 which actually works.

Let's don't hear it for progressive:

DIGITAL ANYTHING: No one has yet come up with a digital encoding scheme which does not have a modulation index of at least three and suffer multipath and selective fading out the waz. So the bright shiny digital modes closely resemble the wideband FM abolished in the late 50s but don't work as well. Gag me with a forklift.

Ugh, me progressive. New good, old bad. Ugh.

>I understand that CW is required to conform to the ITU.

International treaty says that a morse code TEST is required of all who want amateur radio licenses. This test may be waived for licenses that only allow operation above 30 MHz. The FCC has stated that this treaty requirement is now the only reason they retain the Morse code test, and only at 5 wpm.

In other words, the FCC's hands are tied until the treaty changes.

>When will this
>archaic testing requirement be eliminated?

Some of us don't think it's "archaic". But the way the FCC talks, the test cannot be eliminated until after the treaty changes. The soonest the treaty could change is 2003.

FCC explained all this in their Report and Order.

> Please do no misinterpret this

>message. I am advocating elimination of code test. We should not eliminate
>CW. IF CW is your thing, by all means go for it!

Thanks!

OK let's give it a go.  I think it's pretty "inarguable" that each applicant
for an Amateur Radio License should be required to provide his name,
street address, city, state, and Zip code on his license application.
What do you think?  Is this axeing too much?

Upgrading does result in an automatically renewed license. Changing address or other information (other than license class) does not result in an administrative renewal of the license. It used to, but not anymore. I think they had to eliminate this feature due to problems associated with the renewal dates of Vanity call signs.

Jim:

Maybe you can answer this question. I've been asking Cecil this for years, and he can't come up with an answer -- so perhaps you can.

What is the relationship between professional engineering credentials and working experience, and the testing requirements for an AMATEUR radio license? And while you're at it, please explain why people who ride on busses aren't required to possess Commercial Driver's Licenses.

Jim:

I'd say it will be pretty soon now -- thanks to weak, whining wimps
like you who can't see the value of learning a uniquely practical,
effective, efficient, and universal communications mode.  If the ITU
Treaty Requirement is voted out of existence at WRC '03, the
legislative and regulatory process to "sunset" the U.S. FCC
requirement could still take another year or two.  It's a WHOLE
lot easier than learning the Morse Code at 5 WPM!

BTW -- you smoked my Troll-O-Meter with this post, so you owe
me a new one.  Ask Hansl for the ordering information.

It is usually very simple for an electrical engineer to pass theory exams. Rather than memorizing the theory, engineers learn it. They also have learned basic theory such as Ohms Law, and AC theory as part of their curriculum. Many engineers are also inclined to have an interest in amateur radio, This was even more true before the widespread availability of Internet Access.

Ah, good! you won't find it to be to difficult, then?

Again, this is analogous
> to starting a car using a hand crank.

So where you going to find a car these days that is set up for starting
with a hand crank? You that far behind the curve on technology?

You simply want new hams to undergo
> this hazing ritual because you were subjected to it!

You are simply full of crap. I want hams to learn the radiotlegraph code becuse it is the most basic method of radiocommunications. You come off as looking like a complete doofus with such statements. And CW is widely used today, aside from ham radio. There are *many* services which use it to ID their transmitters. So we have hams today who shout "What's that??" when the repeater ID goes off. I guess you're another one. What the hay, you don't need no steenking IDer anyway, up there on 27 megacycles.

It's time to move on!
> Get over it before this hobby dies and amateur radio eventually loses more
> spectrum.

Ham radio is basically withering on the vine even as the license numbers in the FCC database reach record proportions. It has nothing to do with numbers. And if you really believe that CB style hobbyists will prevail over commercial need for our spectrum, you need a good dose of reality.

Go rent a clue and check out how stupid you really are. Anyone who summarily dismisses any individual as "closed minded" on the sole principle that he supports the teaching and testing of the most basic radiocommunications mode within ham radio is beyond comment. Live with it.

The amateur should have proficiency in:

knowing where they are allowed to transmit
basic amateur rules
rf safety, similar to now, perhaps scaled back a bit
non-rf voltage safety
basic electronics - similar to now
knowlege of different modes of transmission

Here is the controversial part:

I think the amateur should be able to demonstrate via testing, an in depth knowledge of one particular mode of transmission. This could be cw

with a morse code test, ssb with tested knowledge in that. Packet, EME,
etc could be tested for. Pick a subject and do your test in that. The
tests would not be easy, they would assume similar effort expended
learning the particualr mode as learning the cw part.

Those for who Morse code is such a waste would be able to demonstrate
their proficiency in another area, the service would not be dumbed down,
so everyone should be happy, right? 8^)

I don't doubt that there could be a problem or two along the way, but I
kind of like it.

"Progressive" is just another term for "gimmie a pass on the basics".

"Freebanding" is already license-free...and against the law.

>Nice. As far as 'outmoded' modes go,
>you should probably go past CW and AM and throw in sideband also. It's been
>around since before the 50's.

There was never a manual operator-demonstration test for AM
or SSB or any other non-OOK-CW mode in US amateur testing.
Never.

SSB on radio has been around since the 1930s, on landline
since the 1920s.

Your first part boils down to enough familiarity with the basics to avoid being a threat to himself and others. Depending upon your cynicism, either so the licensing authority can sleep nites or keep from being sued.

As for the second part, I'd settle for significant achievement in ANY solitary human activity that isn't illegal and quite possibly some that are. Doing a marathon or even 10K in a time measurable with anything but a sundial qualifies. Doing fifty burglaries without getting caught is worthy of at least consideration.

But anyone convicted of self-deception, self-justification, and general whining over a fairly simple code test from now until it goes away is permanently barred.

The point being missed here, is that somebody has already come up with a pretty good list of things amateurs should be proficient in - none of which pass muster as being "necessary" in the sense Mr. Wayda applies solely to Morse code.

> I think the amateur should be able to demonstrate via testing, an in depth knowledge of one particular mode of transmission. This could be cw with a morse code test, ssb with tested knowledge in that. Packet, EME, etc could be tested for. Pick a subject and do your test in that. The tests would not be easy, they would assume similar effort expended learning the particualr mode as learning the cw part.

Nobel Prize winners? Canonized Catholic Saints? "Leaders?"

All because of having a noclue Novice license? Remarkable!

>Ya oughta jumped in back then like we did Lenny, ya
>missed yer ticket to ride. Novice ticket that is.

Of course, of course, senior. My "ride" wasn't on a hobby
merry-go-round like yours.   :-)

<on microwave band amateur operations>

>Yeah, I'm LICENSED to do that but yiu're NOT. Keep tuning for me
>Lenny, but for God's sake don't transmit, you're not allowed to do
>that. Just listen: That's all you're allowed to do.

:-) True, on some of the amateur microwave bands, but not on
others.

I'd like to see some of Kelly's "qualifications" on proving
suppression of harmonic content below FCC amateur radio
limits. Any band. Engineers do that. Maybe Kelly has
"loftier things to do" and should not be bothered by that?   :-)

>>Contact the nearest neighborhood QPC and tell them how to
>>do things in no uncertain terms! I'm sure they will appreciate
>>being told all about how amateur radio testing should be done.
>>
>How did they react to your "instructions"?

I haven't contacted the VEC QPC. I see no need to.

Kelly is the one in dispute with today's amateur written tests,
not me. :-)

In article <3AF9FAD4.310E1739@earthlink.net>, Dave Heil <k8mn@earthlink.net> writes:

>Len, when you finally have a chance to regale us with your amateur radio
>tales, they won't go back very far, will they?

:-)

Expected. Heil manufactured a sub-thread of "wanna-bes slavering after an amateur radio license and sick at not having one," and now comes the prologue to what would happen if and only if such a license would be required. Heil was transparent before and now he has proved the transparency. :-)

Heil seems to have only one motive: Be angry at everyone who doesn't hold dear those values and viewpoints Heil holds...and will continue to attempt put-downs on everyone not agreeing with hid sacred, divine views. No problem. Such individuals are bountiful in and out of amateur radio, busy waving their "credentials" and shouting "I can do it but you can't" like some well-over-the-hill schoolkids. Heil will then put on his emperor's new clothes suit and demand subservience because of his innate (self-professed) "superiority." :-)

The subject thread (indeed, this very newsgroup) is the retention or elimination of the morse code test for an amateur radio license. Instead, it becomes a war of personalities, of the flag rank who have "made it" up in arms against those who did not "enlist" in the "service." Heil insists on all those who storm any barricades of thought first be on Heil's side (do as Heil did) before being "allowed" to argue with his exhalted presence. Pfui.

Heil is too wrapped up in his own personal credentialed viewpoint to dispassionately or logically argue any case for or against regulations. Regulations of US government, indeed all US laws, can be argued for or against by all citizens of the US. There is no sacred "bill of rights" in the US Constitution that requires "proof of motive," "adherence to a fraternal order's tradition," or any other ethos or mythos to discuss, debate, or argue regulations concerning US amateur radio. None.

Heil seems to argue "in order to argue against 'us' you first have to 'be' like 'us.'" as if the 'us' in this case were some nobility created by divine providence. Subjective and illogical non-qualification. Others of Heil's ilk, sept, and clan seem to use equally illogical subjective "arguements" demanding such credentialism and "qualification" but in cruder, more immature ways.

"Tales of the last century" are historical facts and artifacts and "old war stories" are merely personal anecdotes. But, the "spirit" of olde tyme hamme radio seems to be an extremely personal experience, all such "propagation" going on inside individual heads, virtual worlds imagined while poised behind solo-operated radios. Having achieved personal goals at whatever level demanded by forebears, the olde tyme hamme falls into the demand "to be worthy of discussion with 'us' you must first be one of 'us!'" The codicil of this demand of will is then attached, "Do it or shut up!"   :-)

Heil can do several things in response to this message:

1. Try arguing the case for a code test on the basis for the code as a radio regulatory tool by governments.
2. Seek out the Internet newsgroup nabobs who control newsgroup creations and demand a closed fraternal-order-qualified access wherein all with access can busy themselves with make-work of self-congratulations and braggadoccio on morse code proficiency (no others will have access and cannot see the glory and majesty of this achievement).
3. Do nothing, continue with the hobby and seek personal vengence against personal viewpoint opposition elsewhere.

In article <3afa5c89.323435522@news2.dvol.com>, kelly@nospam.dvol.com (Brian Kelly, w3rv) writes:

>>... Has the ARRL stated openly
>>that it requested tableing of the S25.5 through the
>>IARU? Did the IARU web page (at the ARRL site)
>>say so? How many radio amateurs are acquainted
>>with this bit of recent history in detail?
>>
>Most of us. You think you're the only one who knows what's up??

There is no proof whatsoever in Kelly's claim that "most of 'us' (radio amateurs)" know what is up. This can be seen on many of the questions and new subject thread starts begun by many in amateur newsgroups. :-)

>Egomaniac ham radio "expert" in a ham NG with no ham license, gotta
>love it.

:-)   Kelly has become disturbed because his own ego is threatened?

Following Kelly's "logic," the FCC itself is a bunch of "egomaniacs" because they regulate US amateur radio and are not required to have amateur radio licenses!   :-)

>The simple and obvious fact of the matter in this case Lenny is that
>S25.5 is such a weenie piece of trivia in the big picture that the
>upcoming WRC most likely will not bother with it. As in they have more
>important issues to handle within the limited timeframe they have to
>deal with anything .

The agenda (as of now) for WRC-03 has 38 separate articles for consideration by adminstrations. Of those, 9 articles affect amateur radio in whole or in part. WRC-03 is two years away...how is that a "limited timeframe?"

If S25.5 is such a "weenie piece of trivia" then why is morse code skill demonstrated by testing such an important subject for amateur radio?

>So of course that prospect just pisses you off no end Lenny, they're
>probably once again gonna brush off the opportunirty for you to
>achieve your lifetime "victory"over ham radio. Keep twisting Lenny,
>whine, whine, rant, rant, ya just never know Lenny . .

There is no "victory" or "battle" going on except in the minds of those who fear reduction in their amateur titles, status, and privileges. I have no "battle against ham radio." My desire is simply to have an old test element eliminated. Oddly, the FCC wants to eliminate it as well. Oh, my, the effrontery of the FCC eliminating that test! Who do they think they are, the civil radio regulators?!?   :-)

Elimination of the code test should not affect Kelly's license privileges. If Kelly keeps to a timely schedule of renewals, he will never have to take another radio test in his life. No worries at all about having to learn something new. :-)

>And ham radio has no interest whatsoever in the NTIA. The NTIA is a
>low-level advisory frequency bookeeping operation period Lenny, get
>past it.

:-)   If so, then Kelly should forthwith contact his congressperson and have such a wasteful government agency eliminated. However, the NTIA is a part of the voting US administration team at WRCs.

>Keep thrashing for somebody else to get S25.5 on the agenda
>Lenny, your're running out of rope quick, the NTIA ain't gonna save
>your bacon.

No "bacon" is desired to be "saved," save for some now and then for a bacon-lettuce-and-tomato sandwich for lunch. :-)

Kelly is manufacturing a dispute again, unable to see what was being discussed.

Kelly doesn't realize that S25.5 was not specifically an agenda item for any US WARC or WRC agenda list, minutes, or mention until this April. So far the only mention specifically on S25.5 is the NTIA's draft paper.

>>The NTIA is part
>>of the US voting administration team at WRCs.
>>The ARRL and the IARU have no vote at WRCs.
>>
>Yeah, Like the NRA has "no vote in the U.S. Congress".

The NRA has no vote in the US Congress. The ARRL-IARU has no vote in the ITU.

Does Kelly wish to promote personal arms carry for WRC meeting members?   :-)

Kelly could use a dose of diazepam before the next message session. :-)

The majority of so-called "10 meter radios" built today are targeted for use by CBers - as evidenced by their channelized design, built-in roger beeps, echo boards, etc. There is no reason (other than the illegal cb market) that these radios exist.

Check out this web page written by export radio fans. The 3rd paragraph is especially outrageous. The intent seem to be to open up 10 meters to CBers. No where is there talk of using these rigs legitimately.

http://www.mods.dk/mods.php3?model=hr2510&radio=uniden

"Author: Josh Steele

As you know, the HR2510 is a mobile 10-meter transceiver radio recently introduced into the market by the Uniden Corporation. Rumor has if that if is easily convertible to on 11-meter radio, but the manufacturer would never admit so that. Let me fell you, however, that the rumor is definitely true.

This radio is hot!. It is so hot that distributors can't keep the radio in stock. And, as Jack reports to me, Uniden can't fill their orders to heir distributors. They cannot produce enough the radios in the Orient. A large shipment was received in the states recently, but it only mounted to a fraction of the number that has seen ordered from the company.

The HR2510 is for the CBer who has verything. If can expand your horizon into a hole new area. As Uniden's own literature tates, it "opens up 10 Meters to more people that ever before." If you're a lover of export radios, you'll love this unit. It is an idea whose has

echo definately sucks on 11m sideband as well, especially thse jokers who get their kicks by echoing their roger beeps. I never saw the need for the modulation toys, I have only ever seen two good reasons for a power mic, one was a friend of mine who had a really soft voice due to his suffering throat cancer, and he had his setup on a O-scope and had it set at 100% (or as close to it as possible) by a local radio sho that is owned by a local HAM, the other was a friend who had a radio with weak modulation, he had it in every shop in the tri state area and nobody could trace the problem, so he had a power mic that he barely cracked open. Other than this, power mics and modulation kits (connex boards) are a waste and useless for good sounding radio.

I received an e-mail in response to a reply I had made to a post. Groping for words, I did not use the phrase 'actuarilly reduce'. My spelling may be in error, but I think you have the idea. I responded 'using actuary tables (at least I think). I received an e-mail stating the adjective should be 'actuarial'. I thank the gentleman for this response. Gang, I would hope that we could use this group as an exchange of ideas - and an opportunity to learn! We needn't flame each other; rather, we can use the newsgroup for purposes as I stated - an opportunity to exchange ideas and to learn. To Andrew, thanks for the correction. It has been noted. Now, gang, how about some real discussions about amateur radio (and, unless you have something serious to point out, leave the CW vs no CW and the gay issues alone? It's just too hot with no real answers (I believe, but if you have something constructive to add, I'm certainly willing to listen!)

Thanks especially to Andrew and 73 to all from Rochester, NY
Jim (AA2QA)
ps - next time I'll use the excuse that my bifocals aren't all that good!
:)
pps - Andy, I'll getcha sometime, but for now, I do thank you!

Hans, I did NOT affirm the above statement, I said it (the law) was
no myth and that is perfectly true. The law is no myth. Georgia residents
affirmed my statement. Now please apologize and say three "Hell Marys".

I've answered the question tens of times, Larry. You just don't like
the answer which is: Electronics is electronics. There is nothing
special about amateur radio electronics. That an engineer finds the
amateur radio test effortless is irrelevant. No effort is required
by the FCC.

Another thought that hasn't been covered, but my main reason why I probably will not get on HF for quite a long time is I am a RENTER. There are a ton (don't have exact figures) of hams that basically fall into the RENTER category, this would also include lessees (i.e. condo's, townhouses etc.) and there seems to be not any group whatsoever lobbying for the support of people who are hams, and wish to deal with any form of antennas.

With my landlord, they have a very vague policy written in the rules, "No Bases." Apparently they seem to think every transmitting device MUST be a CB, and I even ran into serious problems trying to make them believe my dual band HT was a scanner.... (it is a HT, but in order to keep from eviction I had to convince them it was a scanner.....)

Hmmmmm..... where is the ARRL on this one???? I know this is not the answer to the question, but may be part of it. I know there are a bunch of "stealth" antennas and disguise ideas for the equipment itself, but why should we have to do this? My personal free time is at an EXTREME premium when I am not at work (work 65-80 hours per week) , so I do not have a ton of time to experiment with stuff. I need tried and true equipment and accessories, that allow me to communicate as soon as possible. Maybe that the majority of hams are in retirement age category would explain why they have "all the time in the world."

Just some thoughts....

Ryan KC8PMX

You are, of course, speaking for yourself, Dick. I expect more than doodly from people. There is probably deep meaning to be found in the fact that we each seem to be getting exactly what we expect out of Amateur Radio...

Would you have similar, but opposite, feelings if they significantly increased the code speed requirement for new hams? Perhaps that one had to attain 40 wpm to get all Amateur priveleges?

> I won't begrudge the new hams anything though, they are just taking the
>test in force at the time of their exam, just as I am taking the tests
>available in my own time.

And I respect you for that. The ONLY tests that new hams can take are the ones stipulated by the rules -- they are taking the test that is required, just as I did in 1963 and 1964. There are some, however, that fault those who have done no more wrong than to do what the law requires to get a license.

This bailing out you refer to, could you possibly ask them to please
bail out of the 40 meter ham band?

Thanks,

>Ham radio is basically withering on the vine even as the license
>numbers in the FCC database reach record proportions.

In what way? We have harder tests than we did when I was licensed. Those tests cover more technical ground. Hams are using modes we never dreamed were possible. We have more HF spectrum than we had when I was first a General. Looking over the past 15 years, we have lost a bit of VHF spectrum, gained a bit of UHF spectrum and lost a bit of microwave spectrum.

Why the doom and gloom?

The curve is not that far behind. However one might call the amateur
radio curve broader than anverage.

Excuse me. From your diatribe, it was evident that you didn't care for
hams regaling anyone with their tales. If you don't care for ham radio,
why do you haunt a ham radio newsgroup? If you don't desire a license,
why the fixation with amateur radio? If you aren't a wannabee, why
lengthy posts on amateur radio?

> Heil seems to have only one motive: Be angry at everyone who
> doesn't hold dear those values and viewpoints Heil holds...and
> will continue to attempt put-downs on everyone not agreeing with
> hid sacred, divine views. No problem. Such individuals are
> bountiful in and out of amateur radio, busy waving their "credentials"

> "superiority." :-)

My neighbor and I don't share the same religious or political views. We get along famously. Then again, he isn't a pontificating wind bag. I'm not angry very often, Len. I don't much care for you. If you don't want to get your feelings hurt just can your "expert in amateur radio" routine.

> The subject thread (indeed, this very newsgroup) is the retention or elimination of the morse code test for an amateur radio license. Instead, it becomes a war of personalities, of the flag rank who have "made it" up in arms against those who did not "enlist" in the "service." Heil insists on all those who storm any barricades of thought first be on Heil's side (do as Heil did) before being "allowed" to argue with his exhalted presence. Pfui.

Len, what stops you from obtaining a code free ticket? What physical or mental handicap prohibits your learning the code at 5 wpm and passing the exam for an HF ticket? If you want in on the enjoyment of amateur radio, why should you not be required to meet the requirements in place for obtaining a license? You are a mass of wind and bluster.

> Heil is too wrapped up in his own personal credentialed viewpoint to dispassionately or logically argue any case for or against regulations. Regulations of US government, indeed all US laws, can be argued for or against by all citizens of the US. There is no sacred "bill of rights" in the US Constitution that requires "proof of motive," "adherence to a fraternal order's tradition," or any other ethos or mythos to discuss, debate, or argue regulations concerning US amateur radio. None.

Len, I have never seen you idspassionately argue anything here. You've made your case to the Feds, who are you preaching to here? My rights extend to not having to accept your idea of ham radio nirvana, not being forced to read your crap without being able to present a dissenting view and to encourange others to see you for what you are.

> Heil seems to argue "in order to argue against 'us' you first have to 'be' like 'us.'" as if the 'us' in this case were some nobility created by divine providence. Subjective and illogical non-qualification. Others of Heil's ilk, sept, and clan seem to use equally illogical subjective "arguements" demanding such credentialism and "qualification" but in cruder, more immature ways.

Anderson has no amateur license, no amateur radio experience and, as far as I can tell, doesn't enjoy much credence here. I wouldn't take advice about buying a guitar from a guy who doesn't play guitar even if he presented me with loads of information he had gleaned from the web.

> "Tales of the last century" are historical facts and artifacts and "old war stories" are merely personal anecdotes. But, the "spirit" of olde tyme hamme radio seems to be an extremely personal experience, all such "propagation" going on inside

> individual heads, virtual worlds imagined while poised behind
> solo-operated radios. Having achieved personal goals at

> falls into the demand "to be worthy of discussion with 'us'
> you must first be one of 'us!'" The codicil of this demand of
> will is then attached, "Do it or shut up!"   :-)

You are the one doing the Walter Mitty bit, Len. There you sit in front
of your computer imaging that you fire up that new KW rig, direct your
stacked yagis toward Agalega and break the pile with your first call.
The rest of us are doing those things in amateur radio which please us.
Do you expect me to buy your notion of how amateur radio should be
"fixed" when you've never had one minute's experience as a ham.
That is preposterous.

> Heil can do several things in response to this message:

>   elsewhere.

Anderson left out several additional options. Of those, the one I like
it: Lambast Anderson here whenever one of his posts annoys me enough.
I do plan to continue with amateur radio as I have for the past 38
years. What is holding you up?

Let me clear up a misconception you seem to have, Len. You don't work
for the FCC. You are not in charge of amateur radio or any other type
of licensing. Your role here is as the geezer with the axe to grind. :)

The system speaks for itself. Loud and Clear. It says "No code. And damn little of anything else".

Basic automobiles would include an engine, transmission, wheels, transmission, gears, steering, brakes and a few other fundamentsls....

Basic radio communication would include a RF carrier generator, means of encoding and decoding information, the simplest and most basic (and, incidently one of the easiest to implement and use) would be on-off keyed radiotelegraphy...

Sorry you choose to look the other way and concurrently ignore all the codebashers vitrolic hatred of all of us who long ago just did whatever it took, and who now take the blame for the codehaters' own personal problems and shortcomings. Your message comes through loud and clear, RST599.

Whether or not you know it, or acknowledge it, the League WILL get credit for your attitude here. No one believes for a minute that you wouldn't be shut off quick as a flash if your public attitude here clashed in any serious way with the official League viewpoint.

As the writer of the line right under Dick's name, I for one am getting damned tired of bozos reacting to Morse like Dracula to the Cross. When Mike is personally attacked for passing a code test, all the rules of civility go right out the window (being of Bohemian ancestry, defenstration has always struck me as interesting for some reason). We get the same old 'hazing ritual' nonsense and a denigration of what is a minor achievement but an achievement none the less.

I have long since adjusted to the reality that code testing is, probably
justifiably, on its way out. But I have no intention whatsoever of
apologizing to the likes of Jim for having passed one.

That reminds me of the time a bunch of Texas Aggies stole the Texas U.
longhorn mascot, ground him up for hamburger, and served him in the
mess hall at Texas A&M.

That's odd. You'd think that since there's no fee involved, the FCC
would just as soon kill two birds with one administrative stone, thus
ensuring that they don't have to do anything with your steenking ham
ticket for (hopefully) another ten years. Oh well.

Mike:

I totally agree, and wholeheartedly endorse this idea -- except that I would
extend it to ALL of the PRIMARY modes of Amateur Radio communication,
based on common usage. This would mean that the prospective amateur
have "in depth" knowledge in FM, SSB, CW, RTTY, and PSK31. These
are by far the most commonly used modes at this time. Now -- "in depth"
knowledge is going to really impose a load on the prospective amateur.
It will mean being able to go back to the good 'ole days, and draw block
diagrams and schematics of practical circuits for all of these modes,
answer technical questions far in advance of the current requirements, and,
in the case of CW, it means that demonstrating sending and receiving
capability at a lousy 20 WPM simply won't cut it -- since the military
and commercial standards were at least 25 WPM for beginning operators.
So -- be careful what you ask for -- you may get it!

>This could be cw
>with a morse code test, ssb with tested knowledge in that. Packet, EME,
>etc could be tested for. Pick a subject and do your test in that. The

>learning the particualr mode as learning the cw part.

I certainly hope so, since you've now increased minimum code testing
speed by a factor of five times!

>   Those for who Morse code is such a waste would be able to demonstrate
>their proficiency in another area, the service would not be dumbed down,
>so everyone should be happy, right? 8^)

Yep. And those who learned Morse Code at 25 WPM and above would
find that it isn't "such a waste." Of course, I also think that a minimum of
2500 logged hours of monitoring 75-meter SSB QSO's should also be
a requirement for licensing in that mode, just to give the prospective ham
a good idea of what "such a waste" really means!

Jim:

Are you saying that mature, educated, and professional electronics engineers are no longer as attracted to amateur for the same reasons as high-school kids in baggy pants and multiple tatoos and piercings? That hardly seems likely, but if you say so, I'll take your word for it! That being the case, just who *is* attracted to ham radio, and why?

Cecil:

Hmmm -- I still don't think you've responded to the question in the context of the topic of this newsgroup, i.e. code testing requirements. I would expect the electronics theory part of the amateur radio written tests to be completely effortless for professional electronics engineers and technicians. That is not really an issue with me. What I want to know is why these same professional engineers and technicians, at least the ones you know, think and/or feel that they deserve a special exemption from the code testing requirements, just BECAUSE they ARE professional electronics engineers? Of all of the praticipants in this newsgroup, you and Len Anderson have whined about this the loudest. So please answer the question.

>and there seems to be not any group whatsoever lobbying for the support of
>people who are hams, and wish to deal with any form of antennas.

You make a very good point. There are several reasons for all the restrictions,
all of them based on fear:

- fear of RFI
- fear of "ugly" antennas
- fear of damage to the property
- fear of complaints of all sorts from other tenants

Landlords want as little hassle as possible - and because it's their property,
they have a lot of legal protection. Many landlords put all sorts of
prohibitions in their leases - no pets, no loud stereos, no working on your
car, no outside antennas of any kind, etc., etc.
>
>With my landlord, they have a very vague policy written in the rules, "No
>Bases." Apparently they seem to think every transmitting device MUST be a
>CB, and I even ran into serious problems trying to make them believe my dual
>band HT was a scanner.... (it is a HT, but in order to keep from eviction I
>had to convince them it was a scanner.....)

Ignorance and fear, of course. You can bet they had bad experiences in the
past. Easiest way to avoid such problems is to simply ban them.
>
>Hmmmmm..... where is the ARRL on this one????

They have worked on this issue for many years. ARRL has pushed for PRB-1 and
other laws to fight unreasonable antenna restrictions. But there is little
legal precedent that I know of to force landlords to permit antennas.

> I know this is not the answer
>to the question, but may be part of it. I know there are a bunch of
>"stealth" antennas and disguise ideas for the equipment itself, but why

>should we have to do this?

Because you don't own the property if you rent.

Ed:

That may be so in your case, but today's tests are NOT harder then when I was first licensed in the early '80's. Obviously, the tests had been made a lot harder between your initial licensure and my own. Just as obviously, they have been subsequently "dumbed down."

>Hams are using modes we never dreamed were
>possible. We have more HF spectrum than we had when I was first a General.
>Looking over the past 15 years, we have lost a bit of VHF spectrum, gained a
>bit of UHF spectrum and lost a bit of microwave spectrum.
>
>Why the doom and gloom?

Because ham radio is going to hell in a handbasket, that's why! We have lowered standards, new hams who don't know the most basic things about the service, who need "Elmering" to get an out-of-the-box VHF/UHF HT to work, and, for the most part, are at or close to retirement age -- and that's the NEW hams we're getting today! We're totally unable to attract teen agers, but Bert and Ethel are chomping at the bit to keep in touch with their kids in Buffalo via HF phone from their motor home in Ft. Lauderdale.

Ham radio operators these days have zilch in the way of technical interest, and even less interest in truly mastering any sort of communications skills which involve physical and mental activity beyond button pushing and talking. To make matters worse, we are seeing an increasing amount of whining in newsgroups like this one about a silly, insignificant, and wholly inconsequential 5 WPM code test. The entire thought of expending any physical, mental, or emotional effort to gain valuable amateur radio privileges has become completely taboo. But, you should know all about that, because you work for the organization that did more than anyone else to let this happen, when it was completely within your power to retain the former meaning and prestige of an amateur radio license. And the worst part (for you and your employer) is that the expected "payoff" probably won't come!

Here's some free advice. Have the ARRL BoD get down on bended knee to the FCC, the Bush Administration, and anyone else they can find and BEG for a return to post-Restructuring license standards. Include a proviso totally separating U. S. code testing requirements from the ITU treaty requirement, thus eliminating the "sunset" issue. If you do that -- do you know what's going to happen? You probably won't lose ten times more "old" hams and ARRL members like myself as you get new members due to Restructuring. Ten years ago I wouldn't have dreamed of letting my ARRL membership lapse. Can you give me any reason why I should renew a couple of years from now, considering the current sorry state of the service in general?

Howdy.

Anyone know the rules (or where I can find the rules) for U.S. amateurs traveling in Mexico. Specifically, the 6m, 2m, and 70cm bands.

Thanks in advance,

Jonathan

They don't think they deserve a special exemption, Larry. To a lot
of them, an HF ham license is simply not worth the effort it takes
to learn Morse code and thus amateur radio is degraded by their
absence. It's amateur radio's loss, not theirs.

Careful, Cecil; for the next 10 years, Larry will claim that you promised that
removing Morse code requirements will result in only high-tech people entering
ham radio and he will point to the average ham as an example of how you broke
your promise.

The "ARRL" study guide was actually a reprint of the study guide put out by the FCC. No secret to this - it says so in the LM.

We did not have the exact Q&A to study, and did not know that the test would be so similar to the guide.

>
>I think this was ridiculous in the opposite direction.

I'm not sure what you mean. My point was that the long drawn out retest process caused most of us to prepare for the test, particularly the written, in every way possible. When you say the new test is "harder", be sure to include all aspects of the test.

The long drawn out process also caused some prospects to give up trying. In my case, it gave me time to build a transmitter and get a station set up so I was ready to go when the license finally arrived.

>Personally, I would
>love to see a 30-day waiting period rule.

How could it be enforced without more work for the FCC?

The best guess would be to dig up an old Bash book.

Take a look at the Extra exam study guide in 1963.......

Get out your copy of the R&O. See how many times the FCC mentions and agrees
with Kenwood's comments, then see how many times they mention the comments of
any other individual or group, including NCI or ARRL.

>Indeed, the
>vast bulk of referenced comments wer from amateurs,

Avoids the question, Bill. I'm not saying that anyone should be prevented from
commenting. I'm not criticizing Kenwood. It's the FCC's excessive attention to
what Kenwood says that is the concern.

There ya go. And the FCC has said that the only reason they kept the code test
was to satisfy the treaty. So if the treaty requirement ends, the FCC will have
no reason to keep any code test.

Agreed! But that's only true because we are relatively few and relatively
invisible. But we're out there. And homebuilt stations (that includes kits as
well as scratch-built ones) are becoming more common.

Sure it is, and if that is the emphasis is has for you, you can cite that first. My first emphasis is that it is a fun mode for me to operate and that I have been enriched by learning it.

To each his own.

Lets see if I got that right- the written test is trivial and of no consequence to them, and they find the code "not worth ANY effort" in spite of the fact that it is the most basic of radiocommunications modes.
They want a total free pass on the whole enchilada.
So what is it about ham radio that attracts ANY of them?

I believe the Tech tests are harder than the one I took in 1963 after studying
a 4-page study guide, Dick. I believe that the Extra tests are harder than the
one I took in 1964 to get the same priveleges by studying a 16-page study
guide. Do you believe those tests were farces, too?

> That doesn't mean they should be applauded in case where
>they sat on their hands for half a lifetime waiting for it.

At what point will you know that newcomers to ham radio are entering ham radio
because they are generally interested instead of entering ham radio after
sitting on their hands? You claim to know the motivations of people entering
ham radio and I wonder if you could explain how you accomplish that?

It appears to me that you are speaking for the system, Dick. If the system speaks for itself, why do you feel the need to keep telling everyone what they should think it means? Because only you have the wisdom to see it?

Nor should you. I don't apologize for mine. But wen the reality comes to pass, those who enter ham radio without the code test should not be asked to apologize, either. We have all entered ham radio by meeting the requirements in place at the time we are licensed. Once we do, those requirements pale in comparison to the things we do within ham radio. If there is judging to be done, the latter is a much better guage of the worth of hams.

And you more than likely would, just like you faced the requirement existent
at the time, made a plan and executed it. In contrast to some who will
spend endless hours deconstructing the achievement and the achievers.

When I was apartment hunting I selected a place on the top floor of the garden apartment building (wood frame construction). And also had an access hatch in the ceiling of a closet to allow me to toss a crude HF antenna up in the "attic" space. I never said a word to the landlord. They can't see it from outside, and let them figure out what SSB sounds like without a proper demodulator.

Just ask "what do you think the police use when they talk back to base?"
Ans: an HT.

Ryan KC8PMX wrote:

>
> Another thought that hasn't been covered, but my main reason why I probably will not get on HF for quite a long time is I am a RENTER. There are a ton (don't have exact figures) of hams that basically fall into the RENTER category, this would also include lessees (i.e. condo's, townhouses etc.) and there seems to be not any group whatsoever lobbying for the support of people who are hams, and wish to deal with any form of antennas.
>
> With my landlord, they have a very vague policy written in the rules, "No Bases." Apparently they seem to think every transmitting device MUST be a CB, and I even ran into serious problems trying to make them believe my dual band HT was a scanner.... (it is a HT, but in order to keep from eviction I had to convince them it was a scanner.....)

FYI on lower speed limits...

The NMA recently received a special report from the Montana Department of Transportation on highway accidents and fatalities. Chad Dornsife, NMA Nevada Activist, has created a web page that compares Montana's last 12 months WITHOUT a speed limit to their first full year of experience WITH a speed limit.

The new information shows that fatalities have more than doubled on rural interstates and has also increased on rural primary highways. This information contradicts the state officials who claimed speed limits, higher fines, and more enforcement would lower traffic deaths.

You can find the full story at
http://www.hwysafety.com/hwy_montana_2001.htm

I agree those are all good things (not all of which are currently covered to a fully useful extent.) However none of these things are inarguably necessary requirements For instance: I challenge you name a single example in which a licensed operator must solve an ohms law problem in order to successfully operate a typical VHF station and thus prevent him from violating an FCC regulation.

One must at least clearly define the distinction between what are useful or practical requirements, and what are necessary requirements before one can claim the subject is inarguable. The motivations for each test topic may each be unique, are not necessarily justified by necessity alone. The justifications for the requirements of an amateur radio license are clearly arguable and hence we have r.r.a.p. ;-)

Test answers don't have to be "standard". You look at the question, and write your answer. Just as the cw test isn't something that is in a pool that you are given the answers to, this test wouldn't have to be be either. Packet is concept, history and software, then tell us about it, ssb is circuitry and concept and history, eme could probably be written about for hours. You could have several questions that would require a written, essay type answer.

People write essays all the time about things that have several ways to perform a function. I have books which expound at great length on these subjects.

The only people who would be punished by this system would be the VE's who would have to wade through the answers. the test would take a little longer. The VE's I know would probably welcome it tho'.

>> WHAT HAS THE ARRL DONE FOR YOU LATELY?

Gee, what has the ARRL done for my lately?

1. They have given me a loud voice in Washington

2. A voice in the ITU

3. They have provided VEs for my son, my wife and myself so that we didn't have wait for months or travel long distances to get our license.

4. They sponsor events, contest and award programs.

5. The co-sponsor JOTA with the Boy and Girl Scouts to get our young people interested in amateur radio.

6. The provide me via email updates about real time amateur news.

I could go on and on. Do I agree with ARRL all the time. Of course not and I will bet you can find a single person that you agree with all the time. Do I think I am getting my moneys? You bet I do!

To paraprase Pres. Kennedy instead of asking what the ARRL has done for you, ask what you can do for the ARRL? I know it sounds corny, but gee whiz it is really true. If you don't like the way they are doing something, then try to work with them to change it. Make your case to your section manager using logic, not this low life name calling. Just think what could be done if every amateur donated an hour a month to support the amateur radio in a focused effort what could be done. Most of us won't even take the time to write our congress person, never mind do some real work.

So you hate the ARRL, then don't join, don't use the buro, don't get ARRL awards, watch TV instead of being at Field Day or other ARRL sponsored events and most of all get a life!

Well, the "typical station" you refer to is the problem. When we get a license above the technician level, we are granted privileges which allow us to do many things, including building our own equipment. For this, some experience with Ohms law (among many other things) is pretty darn useful. If all a person is going to do is plunk down some cash for their YaKenLinco HF transceiver, have someone install an antenna for them, and tune the thing, maybe they don't need quite so much knowledge. Even then, they might have so interference problems for which a little bit of book smarts might be helpful.

After I'm set up with my base HF rig, I plan on building a lot of stuff. That is my favorite part of the hobby.

And since the FCC and the ARS doesn't quite know exactly *what* I might decide to get into, it is prudent to test for a wider, not narrower knowledge base.

In my snailmail box today is an announcement of Hamboree 2001 in beautiful
So Sioux City NE.

And who should appear as a Special Guest but our own Ed Hare. Welcome to
God's Country, Ed! Within a year it's Oh God why did I move here?

While I probably won't make it up I-29 for the hamfest, good to see you out
where the tall corn grows. Will they let you into the QLF contest???

Of that there is no doubt.

Absolutely.

>         After I'm set up with my base HF rig, I plan on building a lot of
> stuff. That is my favorite part of the hobby.

Great!  I like to build stuff too.  Although I use Ohms law regularly in
my work, I can't think of a single ocassion I've had to rely upon it for
my hobby.

>         And since the FCC and the ARS doesn't quite know exactly *what* I might
> decide to get into, it is prudent to test for a wider, not narrower
> knowledge base.

Mike.  I hope you know that I would be the last person to advocate
eliminating ohms law from the requirements.  Please understand that my
comments are in response to someone who is advocating eliminating a
requirement on the basis of lack of necessity.  My only point is to
illustrate that one can similarly argue a lack of necessity for any of
```

the other requirements. As you will see, people will likewise argue that our current requirements ARE necessary. I believe the truth is that our requirements are simply guidelines or recommendations for skill and knowlege that is useful to us as radio amateurs.

73, Jim AC6XG

COMMISSION PROPOSES AMENDMENTS TO PART 15 OF RULES TO FACILITATE DEPLOYMENT OF NEW HIGH SPEED WIRELESS DEVICES.   The FCC proposed revising its rules for spread spectrum systems to reduce the amount of spectrum that must be used for frequency hopping spread spectrum systems operating in the 2.4 GHz band (2400-2483.5 MHz). News Release. Adopted: 05/10/2001. News Media Contact: Maureen Peratino at 202-418-0506 CMMR. Contact Neal McNeil at 202-418-2408

I guess he is at a very impressionable age right now. A desperate ship in search of a rudder as it were. He's come here humbly asking for guidance and advice, only to be swatted away. His delicate sensitivities crushed beyond hope of recovery.

I think I'll have to go and have a good cry about it now, Ed.

>violating an FCC regulation.

OK, here we go:

Many "typical VHF stations" consist of a transceiver connected to some sort of power supply - car electrical system, external AC power supply, etc. Many of these transceivers draw several amperes on transmit. Some of them do not behave well if the supply voltage is too low - the synthesizer unlocks and all sorts of spurs come out. Of course many rigs have undervoltage protection (they just won't work without enough juice) but some do not. FCC acceptance doesn't require such protection of ham rigs.

If the ham hooking up the station doesn't use an adequately sized power supply or power wiring, and has one of those rigs, he/she can emit spurious signals when transmitting, violate FCC rules and cause all kinds of havoc. Yet the rig will still appear to "work OK" to the unknowing amateur.

Figuring out the voltage drop when using a certain length of a certain type of power wiring is a real-world Ohm's Law problem, I'd say.

Shoulda bet a lobster dinner on that one.

Some years ago there was a soap opera spoof on the tube called Fresno that
was shown once and never rerun. Those who watched soaps were offended and
no one else got the joke.

There aren't that many who would get the WN2 and those of us who do would
wonder why you bothered.

Mark Twain in his newspapering days wrote a send-up of the local officialdom
in The Incredible Petrified Man in which if you read carefully the stone man
was sitting crosslegged with this left thumb to the nose, open handed, and
the right hand to the left. He was getting requests for information from
learned professors until he died and regretted ever doing it.

We got too used to being younger than 2/3 of the population, now we are
older than 2/3 of it.
Oh Well.

Why? The FCC is charged with paying attention to EVERY
comment filed. The fact that Kenwood had sufficiently
valued comments that were referenced in no way impunes
the FCC process. Would you say the ame thing about
comments referenced from NON-hams?

What I am "hearing" from you is (IMHO) the oft repeated

comment that the FCC shouldn't listen to anyone BUT hams in
making decisions regarding ham issues. Sorry, it just
doesn't work that way.

Bad comparison as we know that the FCC went through a LONG
period of almost NO enforcement. The point I am making
is that the garbage mouth activity within the ham bands,
the unruly behavior by some, etc. has been around BEFORE
the nocode tech began. There is no apparent cause/effect
that can be shown that suggests hams that haven't passed a
code test are any more or less likly to be behavioral problems.

Before the R&O I wouldn't have assumed that. With the FCC
comments in the R&O, I agree that once the treaty requirement
goes, the USA requirement will also. There will, of course, be
an RM and NPRM, but that will be formality.

How did the landlord ever get to see your HT in the first place?
I have lived in apartments before and there'd be no way the
landlord would have knowledge of my belongings in that
apartment unless the landlord entered with my permission...
and ONLY when I was present.

Additional question: On what basis was the landlord going
to evict you even if you said the HT was a transmitter?   The
lease prohibition against base stations would be (IMHO) enforcable
only if it could be shown that you USED the HT in the apartment.

The rules are those that Mexico requires of their own hams.
Assuming you have a tech+ license or higher, you have
full operating ability equal to the full CEPT reciprocal license
agreements.

At http://www.ieee802.org/15/ you will find pointers to some groups working on both low speed (1 Mbs) and high speed (20 Mbs) Wireless Personal Area Networking. Yep, 2.4 GHz. Now, perhaps we will find drivers using wireless cameras as well as yakking on the cell phones while they drive. Heck, I'd best fish my HA-1 TO keyer back out of the attic. (oh sheeet! Wasn't I the idiot that asked no more discussions about CW?)

Now you speak from the other side of your mouth. You have stated you
don't believe that hams need to have technical knowledge. So all that
technical knowledge is useless, according to you.

Mike, the Technician is also "granted privileges" to build equipment, without any more restrictions than the other license classes. Ohms law is included in the Technician license exam exactly for those who want to build their own equipment.

> For this, some experience with Ohms law
> (among many other [snip]

With my first paragraph in mind, the rest of your message (about those with higher license classes having a greater need for Ohm's law to build their own equipment) is not valid.

In addition, you should note that those who promote the "appliance operator" myth today never offer proof that ham operators in the same license class twenty or thirty years ago built their own equipment at

a rate higher than today's operators. Likewise, it has never even
been demonstrated that higher license class operators today build
their own equipment at a rate higher than Technician class operators
today. In other words, this "appliance operator" myth is absolute
nonsense - a claim made with no basis in fact.

But no single group or individual gets the sort of response that Kenwood did.
Heck, Bill, you and Carl took the time to actually go to the FCC, as well as
filing both individual and group comments, yet Kenwood gets the ink.
>
>>>Indeed, the
>>>vast bulk of referenced comments wer from amateurs,
>>>the ARRL, NCI, etc.
>>

Sorry, Bill, but you've just disproved your own claim. If the FCC hasn't been
doing enforcement for a long time, there's no way to tell what the effects of
the code test/nocodetest are.

>an RM and NPRM, but that will be formality.
>
Maybe not even that. Was there an RM and NPRM for the VE system or medical

waivers? FCC could cite their R&O comments of 1990 and 1999 and say "we have twice said that the code test does not indicate anything other than code ability. We have also said that the only reason it has been retained is the treaty requirement. With the treaty requirement eliminated, there is no regulatory reason to keep the code test any longer". No NPRM, RM, R&O or anything, since they have already laid the groundwork.

Not saying I want that to happen, but I won't be surprised if it does.

Very pleasant, Cecil. Why would "So I be axing you, bruh -- word up!" be something that a "redneck" would say? For that matter, since you love to use it so much, what the heck is a "redneck?" The dictionary definition of "redneck" as a word to bring discredit on

"poorly educated whites from the south" does not apply since whites in
the south are as well educated as people in any other part of the
country. Why then would you single out white southerners with your
"dumb-shit" comment?

Cecil:

How many times have you seen me say that I DO NOT believe that the Morse Code can "stand on its own merits," and that a testing requirement is necessary to ensure that an adequate amount of hams are exposed to Morse/CW operation at a reasonable proficiency level? I dare say, at least a couple of dozen times in the last couple of years. I say Morse/CW is important enough to justify a stand-alone exam -- the problem is, the lazy whiners will never agree, and neither will their self-appointed apologists, such as yourself.

> they need amateur radio.

I agree, Cecil. Years ago, amateur radio was considered part of the learning process for those seeking a career in radio and electronics (a place to test ideas and experiment). Today, I believe mainly because of the code requirement, that is no longer the case. Since code is no longer required for a career in radio, and those interested in other electronics careers see little need for code, the desire to spend time to learn code is simply no longer there. That fact alone makes Amateur Radio far less attractive to those seeking careers in the very fields that might eventually benefit Amateur Radio.

And I think this has already had a serious impact on Amateur Radio. Lets face it, Amateur Radio today is in an evolution mode instead of a revolution mode. The big radio manufacturers have no desire to take major risks - no desire to push Amateur Radio into new directions. Instead, we see bells and whistles slowly added to the same old technology. It takes those with vision, AND the skills necessary to make those visions work, to truly take Amateur Radio in new directions. We have people with vision, but we are slowly losing those with the skills necessary to make those visions a reality.

The codeless Technician license was a step in the right direction. This is especially true since radio technology outside of Amateur Radio has slowly shifted away from HF to VHF and above. Sadly, it may take a decade or more before those entering radio and electronic career fields rediscover Amateur Radio (they didn't lose interest overnight and they won't regain it overnight either). Once they do regain an interest in Amateur Radio (and I think they will - I'm seeing signs of it already), HF will continue to suffer the same fate as does now if the code testing requirement still exists.

Amateur Radio always has had, and always will have, it's share of "appliance operators." However, in the past, Amateur Radio also had it's share of those with the skills to go far beyond that - to take Amateur Radio beyond that. Will Amateur Radio of the future also have them? How much we accept the realities of today will decide that. One of those realities is a decreasing need for a code testing requirement.

Larry, when I got into ham radio a few years ago, I asked a lot of questions. And, in spite of seeing lots of messages from you about how "ham radio is going to hell in a handbasket" due to the then recently reduced morse code requirement (yes, you were ranting about the same thing way back then), I don't remember you ever answering a single question I asked. I wanted to learn (I still do today), and I asked lots of questions, but you offered nothing to help with that learning process.

And I still see you doing the same thing today - lots of talk about how "ham radio is going to hell in a handbasket," but very little when it comes to answering questions from those who post to these newsgroups - very little to help guide those new to ham radio. Sadly, that appears to be the trend among those who share your attitude towards the newer hams - the messages with disparaging remarks greatly outnumber the messages with useful information.

Luckily, I didn't have to depend on you, or your peers, to learn about ham radio. And, in spite of my "ignorance" (about code or anything else you've convinced yourself that you know while others like myself don't), I have been able to put together a decent radio setup and even enjoy this hobby.

Then I'm some great exception to that rule? I've had an interest in electronics that dates back years before you became a ham radio operator in the early 80's. And that interest in electronics continues to this day (I'm in the process of taking another electronics course right now). And, by the way, while my initial introduction to ham radio dates back to the 60's (my father), I did no become involved myself until the code requirement was dropped (no interest in code - I didn't even need code for my military communications job in the early 70's).

> To make matters worse, we are seeing an

> completely taboo.

If the code test is as "silly, insignificant, and wholly inconsequential" as you openly admit it is above, why would anyone want to expend effort to do it? For that matter, why are you making such an effort to defend it? Do you always get so bothered over "insignificant" things?

> But, you should know all about that, because
> you work for the organization that did more
> than anyone else to let this happen, when it

> the former meaning and prestige of an amateur
> radio license. [snip]

For myself, and many others, the license does have meaning and prestige. If it no longer does for you, then perhaps your attitude is the problem, not the license.

IF CW is all so special why are you going around with that $2000 rig that
for the most mart its components are used specifically for PHONE!

Go get yourself one of those 1watt cw transmitters you fool!

Sorry but I completely disagree. If you dig back into the history of
FCC testing you will find that up through the late 1930s the FCC did
in fact have essay-type exam questions. These types of questions gave
rise to all kinds of disputes because the examiner had to use his
personal judgement in the marking process. And those were professional
examiners, not VEs. In today's enviornmrnent those old disputes would
bury the FCC in litigation.
>
The bottom line was that the FCC decided sixty-some years ago to take
personal judgement out of the test scoring process entirely and format
the tests so that the answers were either right or wrong, period.

There are reasons beyond just home-brewing for topics like Ohm's Law
being valid test questions. A knowledge of electronics basics is a
step in the direction of promoting proper maintenance of the station,
a subject dear the FCCs heart.

>

The "definition" of an "appliance operator" is an individual who
doesn't know or care about knowing much if anything about what goes on
behind the panel. Got a BUNCH of them out here these days.

> up!" be something that a "redneck" would say?

The only word being discussed was "axed", Dwight. My redneck family has been saying "axed" for as long as I can remember. Many of the words the blacks use originated with Southern rednecks. Here's the particular statement to which I was responding:

"BTW, I use the form "axed" as a tribute to a particular group of Americans who speak in that manner, and whom, as a group, are protected by federal law from most of the responsibilities of citizenship, but granted superior rights and privileges."

This objection is akin to some hams objection of the use of the word "handle" instead of "name" not knowing that the CBers copied that habit from amateur radio operators.

The group use aspect of amateur repeater operation is much more conducive to camper group communications, Dick. I don't see that the FCC requires that all hams adopt your personal reasons for entering ham radio. Unlike you, a lot of hams do not belong to the ARS for reasons of self-esteem. Asking if they are proud to be hams is a non sequitur for a lot of them. For a lot of hams, amateur radio performs a real-world useful function and that real-world function may be the most important thing about ham radio to them. What is wrong with live and let live?

> >They will
> >not even consider upgrading until the Morse code requirement
> >is history.

> Good. Who needs 'em?

Amateur radio needs 'em, Dick. You are always complaining that hams are not technical enough. What better way to ensure hams are technical than encouraging engineers and scientists to join the ARS?

How wrong you are, Dick. I believe that hams should be extremely technical, more technical than you are. The argument was not over how much hams need to know or should know after they have been hams for 20 years. The argument was over how much hams need to know to pass an *entrance* exam.

How much does a six-year old need to know to gain *entrance* into school VS how much does a 12th grader need to know to *graduate* from school?

Not everyone is like you, Dick. Not everyone stops learning when he/she gets his/her ham ticket. Not everyone feels like they have "arrived" and are content to rest on their "rosey red laurels".

Lennie telling us that he has "friends who are licensed hams" reminds me of the bigot who claims to have "many black friends."

>If he was truly interested, he'd have obtained a license by now.

Who'd want him?

Larry, the simple truth is that if, as you say, Morse Code cannot stand on its own merits, then it doesn't deserve to survive. Why are you so enamored with this particular governmental affirmative action program when you are against most of the others? Why are you against a free market of modes in a hobby in a free country? Have you joined the Socialist Party?

>>simply to have an old test element eliminated. Oddly, the
>>FCC wants to eliminate it as well.

>That's another total crock. Cite your source Lenny.

Sure IS a crock. Follow the LennieLies and you find NUMEROUS threads wherein Lennie ASSERTS the FCC has NO INTENTION or DESIRE to act on the code issue whenever I cite FCC statements that they fully DO intend to do it.

When I state that the FCC has said that it is thier intention to delete code testing when the opportunity arises, HE argues that no such intent is there.

Now he says that the FCC DOES want the test eliminated.

Go figure.

And just when Sire was the last "revolution" in ham radio?? Ham radio
has been slowly evolving ever since Marconi did his stunt over a
hundred years ago. None of it has had anything to do with the
policies, practices or license tests given by the series of spectrum
regulators who have issued U.S. ham licenses over the years. And sure
as hell there has never been any established relationship between the
rate of evolution of ham radio and code tests as the advent of the
nocde license eleven years ago has clearly demonstrated again.

The evidence is certainly not quantitative, but more anecdoatal.
Do you dispute that HF hams even before no-code test, or slow
code as now, had sufficient "bad apples" amongs them that
it was already being viewed as a problem within ham ranks?

>anything, since they have already laid the groundwork.

I don't know if an RM is necessary (the RMs are, as I recall)
input from outside the FCC requesting change. The FCC could,
based solely on the treaty change, go immediately to an
NPRM.

>Not saying I want that to happen, but I won't be surprised if it does.

I believe some degree of public input/process would still
be warranted. Perhaps Phil K, our resident, former FCC barrister,
could shed more light on the process.

Cheers,
Bill K2UNK

>examiners, not VEs.

The FCC radio operator testing up to and past 1956 had essay
questions, at least for the commercial licenses. Testing for all
radio operator licenses was performed at FCC field offices by

FCC personnel for both amateur and commercial radio operator licenses. In the sense that FCC personnel got paid for their work, they were professional. In the sense that FCC field office personnel were assigned to give examinations, they were examiners.

>The bottom line was that the FCC decided sixty-some years ago to take
>personal judgement out of the test scoring process entirely and format
>the tests so that the answers were either right or wrong, period.

Kelly's memory seems inadequate on the FCC's decisions. Essay type questions did appear on radio operator tests in the mid-1950s which makes that about 45 years ago, not 60.

>Mathcad in a wink then sweep the prototype. Whatta no-brainer.
>Which, as you know, is not my technical field at all but I can do it
>anyway.

Suppression of harmonic content is very much a requirement of 97.307 (harmonics are part of spurious output). All amateur licensees are responsible for their own transmitters meeting FCC technical requirements. There is no justification to "let the manufacturer do it."

MathCad is an expensive all-purpose mathematically-oriented problem-solving computer program. So far the program publishers have not claimed any ability of analyzing any radio transmitter's signal quality.

Claiming that a computer program can analyze spurious amateur transmitter outputs is a "no clue" statement along with a dual-plate diode vacuum tube being capable of amplification or as being a surface mount device.

So far Kelly has not shown the slightest possibility of "doing it [technical competence in radio]" in this message. I am confident he can do high rate morse code communications on HF and that is apparently all that counts in amateur radio.

More "insider" information! Amazing what one can learn by not
seeking out the agencies directly involved with radio regulations.

>>I have no "battle against ham radio."
>>
>Whatta hypocritical crock!! Every one of your posts oozes anti-ham
>radio venom Lenny.

No problem. The only clinical problems involving venom is a
current shortage of rattlesnake anti-venom.

Kelly has identified his own viewpoints as synonymous with US
amateur radio. Verbatim. As such, he is correct only in his
mind that my battle against the morse code test retention is a
"battle against ham radio."

>Are you aware of what you write or do you have some
>clinical issues ib play?

:-)

>>My desire is
>>simply to have an old test element eliminated. Oddly, the
>>FCC wants to eliminate it as well.
>>
>That's another total crock. Cite your source Lenny.

FCC Report and Orders 90-53 and 99-412.

>The FCC could care
>less about code tests now that they have gotten away from having to
>deal with processing disability waivers. Whatever hassles over the
>code tests still exist as far administration is concerned was
>downloaded on the VEs eons ago.

More "insider" information!   :-)

>>Elimination of the code test should not affect Kelly's license
>>privileges. If Kelly keeps to a timely schedule of renewals,
>>he will never have to take another radio test in his life. No
>>worries at all about having to learn something new. :-)
>>

>Not the way ham radio works Lenny, another demonstration of your total
>cluelessness. It's impossible to be an active ham and not continue
>learning no matter the class of license or how long the ham has been
>licensed.

Learning what?   :-)

Kelly must try to seek a consensus of opinion on this "how it works" explanation. Some other Extras in here have wildly differing viewpoints.

>I'll tellya what the deal just might be on S25.5 Lenny: The FCC
>certainly has no stake in 25.5 one way or the other.

We are drowning in a sea of "insider" information. :-)

Is there any congressional law requiring the FCC to have any "stake" about amateur radio?

>The ARRL/IARU knows full well that no matter which way 25.5 goes
>they'll get pilloried by half their membership. Which is why the ARRL
>board has already declined to take a stand. So they all cut a deal:
>Don't put 25.5 on the agenda, no work for the FCC and all of 'em can
>point the finger at the ongoing treaty provision, "our hands are
>tied", ye olde punt & deflect maneuver.

Yet another bit of "insider" information. We are all the recipients of a veritable glut of "insider" material...all of which is about as good as the "technical information" of making dual-vacuum diode second IF amplifiers.

>
>In your seventh decade, how good are you at handling SMDs, Len?

Sixth decade. Not too shabby at installing the TSOPs, no muscle
tremors to impair motor skills, myopia helps see teeny things. :-)

SMDs are best handled with tweezers, solder-paste applied with
a toothpick. I've never liked the micro-flame kind of "iron" and
prefer a small high-temperature tiny tip conventional iron (less
than 10 W dissipation). A controlled-temperature-rise and -fall
oven would be a nice addition to the workshop. Maybe next year.
:-)

Heil needs to work on his perception of personal inadequacy.

>You've left no room for those
>who really learned electronics, became excellent operators (regardless
>of mode) or who turned amateur radio into a stepping stone to a career.

Does anyone passing any US amateur radio written test element
have credentials of "really learning electronics?" Really?

Heil, as usual, took my paragraph out of context. It was a
comment to Brian Kelly in regards to Kelly's previous message.
My context was not about "turning amateur radio into a stepping
stone to a career." Heil is just manufacturing another diatribe
subject thread in an attempt to suppress someone who does
not agree with his views.

Amateur radio is a hobby, an activity about radio, done without
pecuniary compensation, that involves federal regulation due to
the nature of electromagnetic waves and federal laws concerning
such electromagnetic waves.

>The question which begs asking after reading each of your posts is:
>Why are you interested in amateur radio at all? What is your fixation?

My fixation is the elimination of the morse code test for an
amateur radio license examination. That is what I have said
in public before and, seemingly, must continue to do so for
the benefit of those who do not read well. The regulation
requiring a morse code test for some US amateur radio
licenses is not inviolate, just a man-made regulation which
can be man-unmade.

What is Heil's fixation? Heil seems fixated on putting down
everyone who does not agree with his views. Constantly.

>
>> >The techncal tests promote education which is a worthwhile objective

Heil should seek a consensus with other Extras in here. Some
Extras contend that today's written examinations are nothing
but meaningless memorization feats and have no redeeming
quality insofar as amateur radio.

I enjoy factual tales of any kind. I don't enjoy fairy tales to support
fantasies.

>If you don't care for ham radio,
>why do you haunt a ham radio newsgroup?

Heil has a memory problem. I am here to advocate elimination of
the morse code test for an amateur radio license.

>If you don't desire a license, why the fixation with amateur radio?

Why is Heil fixated on his demand to prove to Heil one's
motivation?

>If you aren't a wannabee, why lengthy posts on amateur radio?

I advocate the elimination of the morse code test for an amateur
radio license. This newsgroup is the one chartered for such
discussion.

>My neighbor and I don't share the same religious or political views. We
>get along famously. Then again, he isn't a pontificating wind bag. I'm
>not angry very often, Len. I don't much care for you. If you don't
>want to get your feelings hurt just can your "expert in amateur radio"
>routine.

Apparently Heil is in the presumption that morse code skills
represent the "expertise" in US amateur radio. I have no
"expertise" in morse code and do not consider it necessary
for the federal government's needs in licensing radio amateurs.
The federal government agency that regulates amateur radio
licensing has the same viewpoint. Heil is against that viewpoint.

The same federal agency that regulates US amateur radio
licensing says openly that it accepts input on any radio
service from any citizen, regardless of that citizen's
"license qualification." Heil does not favor this democratic
process.

>Len, what stops you from obtaining a code free ticket?

Nothing. Why does Heil insist on having a "ticket" first
before commenting on US federal regulations?

>What physical or
>mental handicap prohibits your learning the code at 5 wpm and passing
>the exam for an HF ticket? If you want in on the enjoyment of amateur
>radio, why should you not be required to meet the requirements in place

>for obtaining a license? You are a mass of wind and bluster.

Heil thinks he may have a "squelch" in the insistence on obtaining a license credential to discuss a radio matter. Heil's fallacy lies in not understanding that obtaining a license would not change a viewpoint that the code test is unneccessary for reason's already repeated numerous times...repeated by those already licensed (and "qualified to discuss" according to Heil's false logic).

>Len, I have never seen you idspassionately argue anything here. You've
>made your case to the Feds, who are you preaching to here?

The same audience that Hiel preaches to, glorifying the standards and practices of 1933 and/or 1963.

A problem exists in Heil's mistaking his personal viewpoints as representative of the majority of US radio amateurs (who are presumably the only ones "qualified" to discuss federal regulations concerning US amateur radio).

>My rights
>extend to not having to accept your idea of ham radio nirvana, not being
>forced to read your crap without being able to present a dissenting view
>and to encourange others to see you for what you are.

Heil has a perfect right to diss anyone not believing as he does, use whatever language he feels "necessary" to accomplish shutting up dissenters. Such is neither discussion, debate, or even argument but rather a patronizing arrogant order-giving "leader of the standards" thinking he is addressing some young troop. Heil wants his hobby world tidy according to his personal tastes, everything in its place, and "lesser" inhabitants doing what they are told.

>Anderson has no amateur license, no amateur radio experience and, as far
>as I can tell, doesn't enjoy much credence here.

No "credence" to Heil's personal tastes nor does he do what Heil orders him to do. :-)

>I wouldn't take advice
>about buying a guitar from a guy who doesn't play guitar even if he
>presented me with loads of information he had gleaned from the web.

Music is not allowed to be transmitted by radio amateurs unless it is incidental to space shuttle communications. :-)

Under Heil's insistent illogic, each and every astronaut should refuse to accept any information and opinions about shuttles or other spacecraft from spacecraft engineers and technicians unless those had also been in space as astronauts.

>You are the one doing the Walter Mitty bit, Len. There you sit in front
>of your computer imaging that you fire up that new KW rig, direct your
>stacked yagis toward Agalega and break the pile with your first call.

Imaginary world of Heil at loose again. I have no desire at all to work DX with any radio equipment in amateur bands.

>The rest of us are doing those things in amateur radio which please us.

Eliminating the code test for a US amateur radio license should not affect any US radio amateur already licensed.

>Do you expect me to buy your notion of how amateur radio should be
>"fixed" when you've never had one minute's experience as a ham.
>That is preposterous.

I have not argued any case against existing US amateur radio practices, only on removal of the morse code test from the US amateur radio license examination...and tried to refute a large number of others' comments about my person for advocating such "preposterous" notions as eliminating a morse code test.

License tests are a function of the FCC's lawful role in regulating US civil radio. While such tests are the (seeming) Holy Grail or Nobel Prize equivalent to the already-licensed, regulations made and changed by a federal agency are still open to comment by citizens.

What is truly preposterous (and rather fascistic) is the notion that only certain "qualified" (by license) individuals have any especial power over and above other citizens regarding federal regulations.

Someone actually turned this around on QRZ and caused quite a stir, claiming t-shirts and caps that read "WITHOUT CW, IT'S JUST CB" were on sale. The original troll got very upset that his own words were turned around and used against him. Interesting approach. Take care and 73 to all. Happy Mother's Day to all ops and XYL's to which it applies.

Mark

>I enjoy factual tales of any kind. I don't enjoy fairy tales to support
>fantasies.

You should. You have created enough of them. However I am convinced you do enjoy some fairy tail to fulfill your fantasies from time to time.

>Heil has a memory problem. I am here to advocate elimination of
>the morse code test for an amateur radio license.

No...You are here to inflict yourself upon those whom you deem to be inferior to you, however Federal regulations allow any citizen that can complete the tests to operate radio stations that YOU think only a EE should be allowed to do.

Grade school kids with a knack for rote memorization can do what you went to 14 years of night school for. Has to be a serious kick in the family ego.

>Why is Heil fixated on his demand to prove to Heil one's
>motivation?

Why does Anderson demonstrate an unwillingness to answer direct questions directly?

>I advocate the elimination of the morse code test for an amateur
>radio license. This newsgroup is the one chartered for such
>discussion.

And it's a topic that has been beaten way beyond morbidity. Not one single act or consensus has been created by this "discussion". Regardless of it's "charter", this is nothing more than a flamefest...sometimes a civilized flamefest, but one nonetheless.

>Apparently Heil is in the presumption that morse code skills
>represent the "expertise" in US amateur radio.

You are the only one making ANY assertion vis-a-vis morse code representing any kind of "expertise" in Amateur Radio. Yet you insist the rest of us are trying to hold to some antiquated standards. The "rest of us" have moved on and are already addressing REAL policy matters IRT Amateur Radio.

However not in THIS forum.

>I have no
>"expertise" in morse code and do not consider it necessary
>for the federal government's needs in licensing radio amateurs.

Your opinion and $3.00 will get you an overpriced cup of coffee in Seattle.

>The federal government agency that regulates amateur radio
>licensing has the same viewpoint. Heil is against that viewpoint.

Against it or not, YOU are the only one making an issue of it. And the federal agency to which you refer has stated that once it's hands are no longer tied by international treaty, morse code testing shall go away.

However YOU keep propping up the body to see how much longer someone will keep flogging it.

>The same federal agency that regulates US amateur radio
>licensing says openly that it accepts input on any radio
>service from any citizen, regardless of that citizen's
>"license qualification." Heil does not favor this democratic
>process.

I think Heil and I share the same opinion...You are at liberty to discuss your opinions with the federal government. However your presence and your tactics herein are nothing shy of cyberterrorism.

Your "opinions" and the manner in which you "present" them are meant to do nothing more than incite anger and arguement. In that regard, you have suceeded.

>Nothing. Why does Heil insist on having a "ticket" first
>before commenting on US federal regulations?

Like me, I think he does not believe that. However, IF you were INVOLVED in Amateur Radio, your opinions would become INFORMED and you might gain some insight as to what you have been otherwise rambling aimlessly about.

>Heil's fallacy lies
>in not understanding that obtaining a license would not change a
>viewpoint that the code test is unneccessary for reason's already
>repeated numerous times...repeated by those already licensed
>(and "qualified to discuss" according to Heil's false logic).

Again...the license does not "qualify" you to discuss the subject matter. Being INVOLVED and INFORMED would.

You are neither...which leads any person who has even the most marginal understanding of the engineering processes to doubt any of your other assertions about your dubious credentials. You violate some of the most basic of engineering principles in your "debates".

>The same audience that Hiel preaches to, glorifying the
>standards and practices of 1933 and/or 1963.

An assertion that you and you alone make.

>A problem exists in Heil's mistaking his personal viewpoints
>as representative of the majority of US radio amateurs (who
>are presumably the only ones "qualified" to discuss federal
>regulations concerning US amateur radio).

His opinions are no more problematic than your assertions as representative of all engineers who allegedly shun Amateur Radio due to the presence of the code test for HF access.

>Heil has a perfect right to diss anyone not believing as he does,
>use whatever language he feels "necessary" to accomplish
>shutting up dissenters. Such is neither discussion, debate, or
>even argument but rather a patronizing arrogant order-giving
>"leader of the standards" thinking he is addressing some young
>troop.

Anderson adores his reflection in the mirror longingly as he commits the above words to NG archives.

>Heil wants his hobby world tidy according to his personal
>tastes, everything in its place, and "lesser" inhabitants doing
>what they are told.

Anderson wants to see Amateur Radio to be the sole domain of the research engineer...delving only into the workings of the box...never having to "reach out and touch someone". Being devoid of any credible social skills renders him incapable of understading that Amateur Radio is NOT just about how the trons move through the box.

>No "credence" to Heil's personal tastes nor does he do what Heil
>orders him to do

Nope...YOU repeatedly demonstrate a complete lack of WORKING knowledge of Amatuer practice or technique. You insist that Amateur Radio is something other than what it really is. That, Lennie, is ignorance AND arrogance.

>Imaginary world of Heil at loose again. I have no desire at all to
>work DX with any radio equipment in amateur bands.

Yet you feel completely at ease chastising those who prefer to follow that pursuit...all-the-while "reminding" us that Amateur Radio is an "avocation". Obviously you are unable to understand the meaning of many of the words YOU choose to use in your often changing assaults on Amateur Radio in general.

>>The rest of us are doing those things in amateur radio which please >>us.

>Eliminating the code test for a US amateur radio license should
>not affect any US radio amateur already licensed.

What does your comment have to do with Daves?

>I have not argued any case against existing US amateur radio
>practices, only on removal of the morse code test from the US
>amateur radio license examination...(SNIP)

Such a unifocal effort leaves you blind as to the nature of the program, but you have resisted any and all suggestions that getting a license and getting involved.

To do so might expose Lennie to REAL Amatuer Radio, not the phantom spectre that he has created in his mind. Such "rapid immersion" might subject him to some sort of emotional shock from which he might never recover.

>License tests are a function of the FCC's lawful role in regulating
>US civil radio.

Yet you insist that the FCC does not have to adhere to the treaties that the United States is signatory to. You insist on lawfulness and adhering to regulatory process when it suits you, yet you simulataneously suggest that the FCC shouold just ignore those same treaties on those matters YOU find objectionable.

>While such tests are the (seeming) Holy Grail or
>Nobel Prize equivalent to the already-licensed, regulations made
>and changed by a federal agency are still open to comment by
>citizens.

And so far the citizens, much to Anderson's chagrin, have indicated that they expect the FCC to adhere to duly ratified treaties.

>What is truly preposterous (and rather fascistic) is the notion
>that only certain "qualified" (by license) individuals have any
>especial power over and above other citizens regarding federal
>regulations.

What is TRULY "preposterous" is that you continue to make this assertion when the point is about your ranting and flaming in this forum with an obviously uninformed "opinion", not your "right" to discuss matters with the federal government.

Ummmm, Len, if you are over sixty, you are in your seventh decade.
The opposite eye sight problem makes it possible for me to repair things
which are, "way over there". In close, I have to use my glasses and a
magnifier for SMDs.

> SMDs are best handled with tweezers, solder-paste applied with

Heil needs to call a spade a spade from time to time.

> >You've left no room for those
> >who really learned electronics, became excellent operators (regardless
> >of mode) or who turned amateur radio into a stepping stone to a career.
>
> Does anyone passing any US amateur radio written test element
> have credentials of "really learning electronics?" Really?

It doesn't matter whether anyone passes or not. It matters whether someone studies the material.

> Heil, as usual, took my paragraph out of context. It was a
> comment to Brian Kelly in regards to Kelly's previous message.
> My context was not about "turning amateur radio into a stepping
> stone to a career." Heil is just manufacturing another diatribe
> subject thread in an attempt to suppress someone who does
> not agree with his views.

What context was omitted, Len? I quoted the paragraph as it was written. I did not address only those who have used amateur radio as a stepping stone to a career. I mentioned those who learned electronics and those who become excellent operators. If all you got was a message about turning amateur radio into a career, you've got static between the cans.

> Amateur radio is a hobby, an activity about radio, done without

I know what amateur radio is. I AM a radio amateur. What is your hobby? It certainly isn't amateur radio.

> >The question which begs asking after reading each of your posts is:

That's not your fixation, Len. Why would anyone who isn't a radio amateur or who is about to become a radio amateur give a rat's ass about morse code testing in the amateur service? What you've said in public does not provide any motivation whatever. My state's regulations on beekeeping can be changed too. I can even petition for that change as a citizen. If I don't keep bees or live next door to a beekeeper, why would I care?

> What is Heil's fixation? Heil seems fixated on putting down

How does expressing my disagreement with your views and questioning your
motive differ from what you do here? Constantly.

Why, pray tell, should I do that? Do you speak for someone other than
yourself? Is it your belief that I speak for someone else?
It is *possible* for someone to rote memorize material without learning
anything. I do not think that anyone who studies the material comes
away without electronics knowledge.

I don't equate asking you a simple question with making a demand. Are
you embarrassed to be asked the question? Are you not proud of your
motive?

> >If you aren't a wannabee, why lengthy posts on amateur radio?
>
> I advocate the elimination of the morse code test for an amateur
> radio license. This newsgroup is the one chartered for such
> discussion.

I know what you do. I asked you why you do it if you have no intention
of obtaining an amateur license? Your posts do not limit themselves to
issues of morse testing so there must be something to your fixation.

> >My neighbor and I don't share the same religious or political views. We

What leads you to that presumption? I certainly have never made that
claim. The Federal Communications Commission has set the code testing
speed for HF access at 5 wpm. I don't argue with that. You do.
I'm arguing not with the FCC but with you.

 > The same federal agency that regulates US amateur radio
> licensing says openly that it accepts input on any radio
> service from any citizen, regardless of that citizen's
> "license qualification." Heil does not favor this democratic
> process.

You've made your comment to the government. What law or regulation
requires me to take your guff here at face value. What law or
regulation prohibits me from telling you that you have no credentials as
an radio amateur? I don't think I'd ask a guy who reads car magazines
about repairing a car. I wouldn't try to learn sailing from a book and
I wouldn't accept Len Anderson as my source on how amateur radio should
be regulated.

> >Len, what stops you from obtaining a code free ticket?
>
> Nothing. Why does Heil insist on having a "ticket" first

> (and "qualified to discuss" according to Heil's false logic).

How would a non-radio amateur know what is best for the amateur service?
In what way have you developed an insight into ways that amateur radio
can be made better? Is it through your work in electronics? Is it
through your experience running RTTY circuits for the army decades ago?

> >Len, I have never seen you idspassionately argue anything here. You've

> A problem exists in Heil's mistaking his personal viewpoints
> as representative of the majority of US radio amateurs (who
> are presumably the only ones "qualified" to discuss federal
> regulations concerning US amateur radio).

I've already stated that my views are my own. At least I speak from a
base of 38 years experience in amateur radio. A guy who received his
license last week has a week's more experience in amateur radio than
Leonard H. Anderson.

> >My rights

Len, you aren't an inhabitant of amateur radio at all. I'm trying to
picture you with you baggy shorts and ballcap on backward rapping about

being dissed. It is a surreal image. I hope you'll re-read your paragraph above prior to making each post here. You adopt the stance of the patronizing old communications pro, here to tell the radio hams how things should be. Well, old timer, you've done jack doodly in amateur radio.

> >Anderson has no amateur license, no amateur radio experience and, as far
> >as I can tell, doesn't enjoy much credence here.
>
> No "credence" to Heil's personal tastes nor does he do what Heil
> orders him to do. :-)

What have I ordered you to do? I've asked you a couple of questions. I've questioned your motivation. I've pointed out that you have no experience as a radio amateur thus little to base your views upon.

> >I wouldn't take advice
> >about buying a guitar from a guy who doesn't play guitar even if he

> space as astronauts.

You didn't design amateur radio. You've never participated in amateur radio. You don't regulate amateur radio. You don't manufacture things for radio amateurs.

> >You are the one doing the Walter Mitty bit, Len. There you sit in front

>
> Imaginary world of Heil at loose again. I have no desire at all to
> work DX with any radio equipment in amateur bands.

On what bands do you do your DXing, Len? It doesn't have to be DXing, Len. You could be regaling newcomers with your Army RTTY circuit glories.

> >The rest of us are doing those things in amateur radio which please us.
>
> Eliminating the code test for a US amateur radio license should
> not affect any US radio amateur already licensed.

No, but it certainly has an effect on those of us who are participants in amateur radio.

> >Do you expect me to buy your notion of how amateur radio should be

> >"fixed" when you've never had one minute's experience as a ham.
> >That is preposterous.

> number of others' comments about my person for advocating
> such "preposterous" notions as eliminating a morse code test.

Well, we wouldn't want your "person" to be more damaged than the damage
it sustains through your own postings. Your past attacks on radio
amateurs and slams of the ARRL seem to belie your statement about only
wanting the code test eliminated. Anyway, why should code testing
bother a nice old fellow who isn't even interested in becoming a radio
amateur?

> License tests are a function of the FCC's lawful role in regulating

The FCC are, by job function, the regulatory professionals in this area.
The Commission is under no obligation to take your comments any more
seriously than I take them.

Ditto per my response above.

> However, to see Heil arrogantly state the "true nature of things"

> Heil is "in charge here."   :-)

"Heil" has been a ham since 1963. "Heil" has...ummm...38 years more experience in amateur radio than "Anderson". Now let's say we select a couple of fellows off the street who have never heard of amateur radio but are eager to learn a bit about it. They are given the choice between learning about ham radio from a) Len Anderson, a man who has never been a radio amateur (but who has several friends who are hams) or B) Dave Heil, a man who has been an active radio amateur for 38 years. Okay, you don't like option B). Let's add option C) Joe Newkid, a man who obtained his amateur radio license a year ago. Imagine the odds of the fellows selecting option A) even if we added, "But Len Anderson is a man who only wants the morse code testing requirements dropped".

Hey, "Disgusted Taxpayer."

I probably paid more taxes last year than you have
in your entire life, "Disgusted Taxpayer."

My vote is leave it alone. There ought to be a pirate
presence, even if it's kooky and nutball like this militia
stuff. Because that paves the way for all kinds of variety
in programming. Why regulate an essentially unlimited
resource like low-power HF broadcasts in the US?

That's absolutely outrageous bullshit, you're starting to come off
like Lenny. The ONLY reason I got into ham radio was to be able to
chase dx. I came into the hobby as a pubescent dxer, somebody will
find me slumped over dead on my paddles after logging one more. "Self
esteem" my ass, it's how I happen to get my own primary jollies out of
ham radio and nothing more.
>
> Asking if they are proud to

Quite frankly I don't care if they use freebie nocode ham radio in
place of commercial comms services or not, but don't waste your time
tryng to convince me and 'most everybody else in this NG that they
bring more to ham radio simply by virtue of their degrees than do a
bunch of unlettered auto mechanics who also pack ham HTs on camping
trips. Talk about non-sequiturs . . .

```
Precisely what "technical contributions" to ham radio do these people
make by using ham HTs to yak at each other on camping trips vs.
yakking with cellphones or with MURS HTs or whatever? Kindly explain
if you will just how these people who happen to have engineering or
physics degrees and HTs "upgrades" ham radio by some mysterious
means??

Yes, it is; it a person who has met the requirements of Part 97 and has been issued an Amateur Radio license by the FCC.

>It's the opposite of a PHONY HAM.

A phony ham is a person who has not met those requirements, but is using a fake call sign on the ham bands.

>Circumsized at 20 wpm by God hisself.

So let me get this straight. If you heard someone with a 2x3
callsign sending CQ on say, 14010 at 40 wpm you would dismiss
him as not a true extra? Would having passed a 20wpm code
test before a steely-eyed FCC tester change your opinion of

him? If so, I suggest then that we urge the ARRL to bring
some of these fellows out of retirement and, sparing the
taxpayer the cost , have them test new extra class licensees,
at the licensees convenience, for a fee to be used to pay the
testers for their time and expenses. The results of said code
tests will be posted on the ARRL website and included on
QRZ.com or whatever. In addition, those who succeed may add
'/TE' to their callsigns to signify 'True Extra' or 'TEsted'.

Believe me, I understand the reason for all this, as I've been
on the other side of the coin in other arenas. I worked for a
number of years as a land surveyor, working up from chainman
to rodman to party chief, then draftsman to computer to office
surveyor. I took pride in my skill. The winds of change came
to the field just as it did in others. EDM (electronic
distance measuring), digital theodolites, data collectors, and
sattelites began to replace the human skill we had relied on
for so long. I took every opportunity to show up the new guys
by doing highly accurate, quick surveys using a seventy year
old transit and 200 foot steel tape. *sigh* The [sk|thr]ill
is gone...

I've always thought it to be an overly simplistic and ineffective way
of supporting code testing requirements, but, of late, it's kind of
growing on me!  I guess ham radio is being "dumbed down" in many
different ways!

Your Troll-O-Meter has a loose needle.  CW NOT CB is the posting
I use to calibrate my new tRoll-O-Meter to the S9 level.

BTW -- as a person who did more than anyone else to popularize
the term "Real Ham," I'll tell you right now that the definition of a Real
Ham doesn't necessarily have anything to do with that ham's Morse
code proficiency status.  It has to do with whether or not he whines
about the testing requirement.

In article <3AFCCDB0.9819B247@sccoast.net>, Dwight Stewart
<stewartx@sccoast.net> writes:

> I agree, Cecil. Years ago, amateur radio was considered part of the
>learning process for those seeking a career in radio and electronics
>(a place to test ideas and experiment).

Dwight:

Your right -- years ago, it was. It isn't anymore, but for reasons that
have absolutely nothing to do with code testing. Ham radio is no longer
a training ground for professional electronics engineers and communicators
because there is little left for us hams in the way of true experimentation,
design of practical, usable equipment, and the homebrewing of same
UNLESS we, as hams, also have the kind of professional electronics
knowledge and experience that goes way beyond what is called for in
a "hobby" service such as ours.

 Today, I believe mainly
>because of the code requirement, that is no longer the case. Since
>code is no longer required for a career in radio, and those interested
>in other electronics careers see little need for code, the desire to
>spend time to learn code is simply no longer there. That fact alone
>makes Amateur Radio far less attractive to those seeking careers in
>the very fields that might eventually benefit Amateur Radio.

This is one of the most specious, self-serving arguments against
code testing I've read in this newsgroup to date. Code testing doesn't
now (particularly at 5 WPM max.) and never DID have anything to
do whatsoever with it's attractiveness to truly interested individuals.
All it did was discourage a few lazy whiners who are so fearful of
possible failure that they never got over the requirement to learn
and be tested for this practical skill. The effect of code testing on
any individual's choice to become a ham has more to do with
psychological and personality factors than any more practical
consideration.

> And I think this has already had a serious impact on Amateur Radio.

A firm grasp of the perfectly obvious -- I like that!

>Lets face it, Amateur Radio today is in an evolution mode instead of a
>revolution mode.

Yeah. What it has evolved into is a mainly consumer-oriented activity consisting of appliance operators who are more concerned with "keeping up with the Jones'" than learning any useful, practical communications skills like Morse/CW.

>The big radio manufacturers have no desire to take
>major risks - no desire to push Amateur Radio into new directions.
>Instead, we see bells and whistles slowly added to the same old
>technology. It takes those with vision, AND the skills necessary to
>make those visions work, to truly take Amateur Radio in new
>directions. We have people with vision, but we are slowly losing
>those with the skills necessary to make those visions a reality.

What is keeping people with those skills and vision out? Code testing has never been a problem for all of the truly talented and technically proficient hams I've met since becoming a ham. If it's a problem for a certain few, well, there is no Constitutionally-guaranteed right to be a licensed ham, and there shouldn't be!

> The codeless Technician license was a step in the right direction.
>This is especially true since radio technology outside of Amateur
>Radio has slowly shifted away from HF to VHF and above. Sadly, it may
>take a decade or more before those entering radio and electronic
>career fields rediscover Amateur Radio (they didn't lose interest
>overnight and they won't regain it overnight either). Once they do
>regain an interest in Amateur Radio (and I think they will - I'm
>seeing signs of it already), HF will continue to suffer the same fate
>as does now if the code testing requirement still exists.

Dwight, I really wish I could visit your area of the country for an extended period of time to see the same things you're seeing. Since the advent of the Code-Free Technician class license, I've been a ham in Colorado Springs, Colorado, and Dover, Delaware. What I've mainly seen as new hams entering the service are ex-CB'ers looking for a more powerful and less chaotic alternative means of doing some good 'ole-fashioned PTT-button mashing. I can count the truly technically involved No-coders I've met on the fingers of one hand, and they have mainly been people who work as professionals in the LMR industry -- the Motorola Moguls, I call them. All the rest have looked and sounded like CB'ers, but much worse, since they imported their poor communications skills and annoying on-the-air habits to the 2-meter band as soon as they were able to without taking a nominal 5 WPM code test.

> Amateur Radio always has had, and always will have, it's share of

>"appliance operators."

Well, that's just about all we're left with today. Are you saying that eliminating the 5 WPM code testing requirement from HF licensure will put an end to "appliance operator" syndrome?

>However, in the past, Amateur Radio also had
>it's share of those with the skills to go far beyond that - to take
>Amateur Radio beyond that. Will Amateur Radio of the future also have
>them?

Of course it will. However, we've never had them in the numbers that were necessary to invoke the kind of radical, revolutionary change that the No-coders seem to always be dreaming of if only they could be relieved of the requirement to learn a practical communications skill at a level so low as to be almost useless in actual practice.

>How much we accept the realities of today will decide that.
>One of those realities is a decreasing need for a code testing requirement.

Well, I, for one, have been saying since April of last year that there is no longer ANY need for a code testing requirement, if that requirement is limited to an unavailing 5 WPM level. And the sooner we kill it off for good, the sooner we will be relieved of the whining from people like you who view this requirement with terminal pusillanimity. And now that it seems that the intellectual cowards like yourself will eventually get your way, it will be interesting to see what you will gripe about next! I expect that it will be over the fact that there is nobody to "talk" to other than middle-aged-and-beyond white men who only want to discuss the weather, their families, and their jobs, but don't have any idea what exists within the box their microphone cord is plugged into!

>questions. And, in spite of seeing lots of messages from you about
>how "ham radio is going to hell in a handbasket" due to the then
>recently reduced morse code requirement (yes, you were ranting about
>the same thing way back then), I don't remember you ever answering a
>single question I asked. I wanted to learn (I still do today), and I
>asked lots of questions, but you offered nothing to help with that
>learning process.

Dwight:

"Elmering" is not what I do in this newsgroup. Here, I bash the
no-coders. I don't do the things here that I do on the air as a radio
amateur, or in person with fellow radio amateurs. If you haven't
figured that out after over a decade, I don't think I can be of much
further help to you.

> And I still see you doing the same thing today - lots of talk about
>how "ham radio is going to hell in a handbasket," but very little when
>it comes to answering questions from those who post to these
>newsgroups - very little to help guide those new to ham radio. Sadly,
>that appears to be the trend among those who share your attitude
>towards the newer hams - the messages with disparaging remarks greatly
>outnumber the messages with useful information.

Well, perhaps if those messages asking for "help" didn't ask questions
which are answered over and over again in virtually all of the ham
publications and websites, then I'd be a bit more forthcoming with
genuine assistance. However, I assume anyone who can post a
message to a Usenet Newsgroup should also have an adequate
handle on the technology of simple keyword searches on a web
browser. I learned everything I needed to know to get myself up
and running on PSK31 without asking anyone for assistance. Am
I a lot smarter than the rest of the ham population? Amateur radio
is supposed to be for and about technically inclined and technically

INVOLVED people. It's not for the technically ignorant consumers we're getting these days. I understand this difference. If you don't, then once again, there's not much I can do to help you.

> Luckily, I didn't have to depend on you, or your peers, to learn
>about ham radio.

That's the first thing you've said in this post with which I can completely agree.

>And, in spite of my "ignorance" (about code or
>anything else you've convinced yourself that you know while others
>like myself don't), I have been able to put together a decent radio
>setup and even enjoy this hobby.

I have absolutely no idea what you do or don't know about the Morse code, and I don't remember asking.

>> [snip] Ham radio operators these days have
>> zilch in the way of technical interest,
>> and even less interest in truly mastering
>> any sort of communications skills which
>> involve physical and mental activity beyond
>> button pushing and talking. [snip]
>
> Then I'm some great exception to that rule?

You may be.

>I've had an interest in
>electronics that dates back years before you became a ham radio
>operator in the early 80's.

Actually, my involvement as an electronics hobbyist predates my first ham license by almost 15 years, when I won my 8th grade Science Fair with a homebrewed transistor radio built out of one of Bill Orr's books.

>And that interest in electronics
>continues to this day (I'm in the process of taking another
>electronics course right now).

More power to you…just remember to keep one hand in your back pocket when working with high voltages!

>And, by the way, while my initial
>introduction to ham radio dates back to the 60's (my father), I did no
>become involved myself until the code requirement was dropped (no
>interest in code - I didn't even need code for my military
>communications job in the early 70's).

Great. You outlived the code testing requirement. Congratulations. You have a lot of company. I also have a lot of company among those who just dug in, accepted the code testing requirement, and ended up thoroughly enjoying ham radio as a proficient CW operator.

>> To make matters worse, we are seeing an increasing amount of whining in newsgroups like this one about a silly, insignificant, and wholly inconsequential 5 WPM code test. The entire thought of expending any physical, mental, or emotional effort to gain valuable amateur radio privileges has become completely taboo.

> If the code test is as "silly, insignificant, and wholly inconsequential" as you openly admit it is above, why would anyone want to expend effort to do it?

I don't know myself, considering the fact that 5 WPM is now the only level required. This is not fast enough to create any kind of useful proficiency which would encourage continued on-the-air usage, so I no longer see any point in keeping this useless requirement.

>For that matter, why are you making such an effort to defend it?

Please provide us with direct quotes of any posting I've made since April 15, 2000, in which I "defend" the 5 WPM code testing requirement. My own recollection is that I've been saying that there's no longer any point in keeping it, much less "defending" it.

>Do you always get so bothered over "insignificant" things?

No bother here, mate.

> For myself, and many others, the license does have meaning and prestige. If it no longer does for you, then perhaps your attitude is the problem, not the license.

Dwight, if the only requirement was to fill out a postcard-sized application blank and send it in, I'm sure you'd still somehow find "meaning and prestige" in your ham radio license. OTOH, I have a much different idea of what gives something like a ham ticket "meaning and prestige." And, as always, if you disagree, then there isn't much I can do to help you. As Cecil would say, I'm "required by circumstances" to "live and let live."

Larry Roll K3LT says...

> ....because there is little left for us hams in the way of
> true experimentation.....

Larry,

Welcome to the SJR&LHAHRDS ("S. J. Robeson & L. H. Anderson Ham Radio Depreciation Society").

Every time I turn my radio on, I consider it an experiment in something -- antenna design, propagation study, receiver selection. I have three homebrewed DSP filters in various stages of evaluation, and am halfway through plans for a digital vocoder for digitized voice experimentation.

When I see all the ideas published in QEX, I don't believe my situation is particularly unusual or related to any "professional" association. Perhaps you are associating with the wrong radio clubs out there in Delaware. Join a QRP club or radiosport club to get in touch with the technical side of our hobby. I bet the FRC or PVRC clubs would love to have you.

There you have it, folks -- the ARRL-endorsed definition of a "Real Ham." Someone who has met the minimum licensing requirements, no more.
In the view of the ARRL, a Real Ham isn't someone who demonstrates curiosity, initiative, a willingness to learn, or a desire to provide any sort of public service. A Real Ham (ARRL version) is merely anyone who can pass the dumbed-down tests by the skin of his teeth, buy a toy HT, and then go around whining about not being able to figure out how to use it.

Ed, you work for the ARRL. Everything you say here is going to be perceived as ARRL's philosophy, because in these times, no organization would permit one of it's employees to access such a public forum without being able to invoke meaningful influence over the content of what that employee said there. And, as was drilled into my brain over and over during my military career and beyond, "Perception is Reality." If you say that a ham has to know nothing, do nothing, and prove nothing in order to be considered a Real Ham, as opposed to a mere license holder, then that is Reality in the eyes of those of us who have been trained to process perception *as* reality.

The only logical conclusion one can draw from the perceptions gained here is that the ARRL no longer sees a radio amateur as anything beyond someone with a piece of paper in his possession. There is no expectation of any kind of ongoing commitment to learning, exploration, and service. All they (the ARRL) expect are larger numbers of people to send in their dues.

Is this really true, Ed? If this perception is wrong, then why did you give it?

A Real Ham is a person who makes something of himself *as* a radio amateur. A Real Ham can even be someone who doesn't possess a license -- it can be a person who is merely aware of, interested in, and enthusiastically pursuing knowledge of the world of radio communication and electronics. My definition does NOT require this person to be proficient in the Morse code or any other mode of operation -- merely to be willing to learn, explore, and demonstrate initiative and a certain amount of self-reliance with regard to the ongoing learning process. Real Hams aren't inept when it comes to technical matters. They are able to read and understand the readily available materials that describe and explain the world of electronics and radio communication. They are willing to listen before they talk. They are willing to give things a try, they aren't willing to give up and be discouraged just because they find people out there who hold and express strong views supportive of traditional amateur radio values.

Ed, I was a member of the ARRL before I became a ham, I will always be an ARRL member as long as I am a ham, and I will always encourage my fellow hams to become ARRL members. However, my fellow hams aren't necessarily people who merely possess a ham radio license. They've got to show me something to indicate to me a level of interest and enthusiasm that warrants their being included within the definition of "Real Ham." No, I am not a person who believes in "inclusivity." I believe that ham radio, by necessity, is a very exclusive activity which needs to be limited only to those who are right-headed about it, and who know and understand its purpose. I do not believe in ham radio for the masses. I support the expansion of unlicensed services like CB, GMRS, MURS and FRS in order to meet the needs of consumer-oriented personal communicators. Ham radio is something much different, and much more.

I would not be opposed to the ARRL expanding its influence over the unlicensed, consumer-oriented communications services. In fact, I think it would be a great idea for the ARRL to create a "division" or other separate operating unit devoted to providing the same sort of support to users of the unlicensed, consumer-oriented

radio services as they do for radio amateurs -- but within the
confines of the basis and purpose of those services. I think there's
enough spectrum out there for everyone, but I also believe that
ham radio is not for everyone, and not everyone needs to be a
ham.

Not if you assume I was replying to Dick who wears his Extra Ticket like a PhD degree.

> Kindly explain
> if you will just how these people who happen to have engineering or
> physics degrees and HTs "upgrades" ham radio by some mysterious
> means??

There's no mystery. They help less knowledgeable hams. For instance, one night around the campfire, an Extra said, "Here's something I never have understood. Why does ...?" Everyone around the campfire knew the most qualified person to answer the question was Dr. Williamson, a no-code Tech with a PhD in electronics - and he did answer the question, and we all learned something that night, something we all could then pass on to other hams.

Nope I haven't, Dick. You just have not been paying attention. I believe
that we should have minimum entrance requirements and maximum expectations
for those people who meet the minimum entrance requirements.

Do you expect an entering first grader to be as knowledgeable as a
high school graduate? I learned virtually everything I know AFTER

I got my ham license. It was a good way to go and I recommend it.

I wouldn't call Dr. Williamson (PhD in electronics) lazy, Larry. He would probably call you lazy. Many, many professional engineers and scientists simply do not think Morse code is worth the trouble and effort, and therefore think ham radio is not worth the trouble and effort. It's ham radio's loss, not theirs.

In my opinion, no one is "attracted" to ham radio. It's probably more that people "happen upon" ham radio; as a result of being exposed to ham radio by their parent, relative, friend, or school.

What actually drives one to become a radio amateur would likely be even harder to identify, but a good guess would be that ham radio provides a venue for some other interest--such as that of someone who perks up at the thought of providing community service, or someone who's been interested in photography/motion picture learning of ATV and getting involved, etc.

Then there's the dark side of the reason why people become ham radio operators. Those would be the unfortunate souls who have no other way to help themselves feel important, somehow. Fortunately, they are few and far between and generally just anti-social enough that we need not worry about the scar they could potentially put on the hobby...

Okay, I think that your question was not serious and that you know it. You would really be an idiot if you had to ask if applicants had to supply their name and address on their application. You are not an idiot, and I suspect that your use of the word "axed" is an indication that your question is no more than a petty troll.

I am sure that you have a lot to offer Amateur Radio and it is unfortunate that you choose to offer this sort of thing instead.

You "axed" me to answer, and I gave you an honest one.

And it is noteworthy that League HQ just totally ignores all that
vituperation heaped upon anyone who 'just did it' in favor of currying
favor with the limp noodle set. Not even a gentle chiding word.
Evidently they believe the future is with them, not us.

(being of Bohemian ancestry, defenstration
> has always struck me as interesting for some reason). We get the same old

Actually these folks don't realize how much they prove the case against
them, that they are just a bunch of aimless yakkers.

> I have long since adjusted to the reality that code testing is, probably
> justifiably, on its way out. But I have no intention whatsoever of

Yeah, like "Gee, guys I sure am sorry they insisted that I learn the
code and actually pass a test on it. Dang, is there anything at all that
I can do for you in penance that would begin to make up for it?" Right.

The official ARRL viewpoint, Dick, is that the League has not changed its position wrt US code testing.

I will say that if ARRL's viewpoint contained the hatred and the ill manners (head soaking and such) that you eschew here, I would not be a member or supporter.

Maybe you should be retested on your ability to read and understand the current rules.

The answer is in Part 97.

Larry needs to be retested to determine if he still has the ability to read and
understand the current rules, too. :-)

Hey, maybe he DID just fill out his name and address on the application.

What has ham radio come to when hams can't read Part 97 for themselves and
expect others to help them understand its simple instructions?

I did not build the rigs in ANY of the stations I put together in the 60s. I used Heathkits and Nationals and... None of the Novices I got to know personally locally did so, either -- not until much later in their ham careers, and even then, the commercial rigs were their main stations.

> Too bad new hams will never know that feeling...

I think they are more likely to know that feeling than we were. Back then, a Heathkit cost a fortune -- today, you can buy an HF QRP transceiver for under $50.00. Back then, you had the fun of drilling and punching a chassis and today you can do it more easily with PC boards.

I bet more hams today have built a transmitter or receiver than did so in the 60s.

Why is it amateur radio's loss? I can pretty well breeze through the tests, yet the cw requirement has been hard. But I figured that I'd put in the effort to learn it. If a person is only going to put out minimal effort for something, and anything above that is reason to forget the whole thing, then they didn't really want it that much IMO. Not that much of a loss in my book.

If they don't want to learn Morse, theres no way you can stop them from not learning it. 8^)

- mike -

W6RCecilA wrote:

> They don't think they deserve a special exemption, Larry. To a lot of them, an HF ham license is simply not worth the effort it takes to learn Morse code and thus amateur radio is degraded by their absence. It's amateur radio's loss, not theirs.

Agreed and I have said as much in a related posting. I just get a little
tired of little dogs biting my heels.

Dick

I think its because of how women are helplessly attracted to amateurs! ;^)

Whoever these engineers are, they probably aren't interested in the ARS period. And thats okay, no one is forcing anyone to be a ham.

In all honesty, I think I would be a little embarrassed or awkward about it. I think I'd make the attempt to work cw faster. But just like the other way around, any annoyance would be for about five minutes, then I'd get on with it.

And although you may think you can safely drive on a particular road at a particular speed, you may be over-judging your abilities.

I heard of a survey once that found that something like 90% of people though they were above average drivers. Now if they were correct, it means the distribution is very skewed; there must be some REALLY REALLY awful drivers somewhere. It's more likely that they are just too confident and can't properly judge their abilities.

The fastest speed limit in most states of Australia is 110km/hour, which is about 69 MPH. It's fast enough for a legal limit.

If so, it's Larry's very own self-fulfilling prophecy. If ham radio is going downhill it's because competent potential hams are being kept out by out-dated requirements.

Dick Carroll wrote:
> They want a total free pass on the whole enchilada.

Only you would think a PhD degree in electronics is a free pass.

> So what is it about ham radio that attracts ANY of them?

For the ones I knew, it was being able to talk to their camping
buddies over an area of 5000 square miles using a mountaintop
repeater. The Tech license was effortless for them. They will
not even consider upgrading until the Morse code requirement
is history.

The ones I know are already Techs because passing the tech license was effortless for them. They will not even consider upgrading until the Morse code requirement is history - not even to be able to talk to me on HF since I retired and moved back to Texas.

(found this in the scanner NG. Thought i'd post it here for hams USA)

Alinco Announces New North American Distributor
Dealer and Customer Service Shifted to Ohio Firm

TORRANCE, CA May 1, 2001

USA Alinco Branch has announced a major change in its distribution structure serving North America. Effective May 1, 2001 Alinco products will be exclusively available to dealers and customer service will be obtained through:

Atoc Amateur Distributing, LLC
23 S. High St., Covington, OH 45318, (937) 473-2840

The Atoc Amateur Distributing operation will be headed by members of the Cota family, who also manufacture and distribute the Iron Horse and ATOC lines of antenna and radio accessories. The Iron Horse line also includes OEM and aftermarket accessories for large vehicles such as RVs, busses and trucks. They are also remembered in the industry as the creator and distributor of the Valor radio accessory product line in the past.

Alinco's corporate function would now concentrate on designing and manufacturing products from its headquarters in Osaka and its ISO 9002 qualified factory in Toyama , Japan. Alinco is a very committed, viable player in the Amateur Radio marketplace as well as branching into related areas, such as the design and manufacture of high quality scanning receivers and power-supplies available to the general public and institutional users such as law enforcement and the military. Alinco believes that having a distributor based in America is good for the dealers and most importantly, good for the growing Alinco customer base.

The transition for dealers should be seamless, as contacts and information will be handed over to the new entity. Evelyn Garrison, WS7A, a long-time Alinco associate, will continue representing the Alinco line for the new organization. Importantly, all Alinco warranties will remain in force and continue to be honored through their term. In addition, customer support and out-of warranty service will be available through the new operation. The repair units currently in the Torrance office will be repaired and returned to its owners within the month of April, while the units in transit will be received and or repaired in California, or transferred to Ohio and the owners will be noticed .For customer-service related information, please kindly visit the PARTS & SERVICE menu on this website for up-dated information. We are sorry that due to this transition our service capabilities are very limited at this moment. Please kindly understand and be patient until the new office in Ohio becomes fully functional.

Alinco is going to exhibit at Dayton Hamvention 2001 as usual, sponsoring W1AW/8 special event station.

Finally, we at the USA Alinco Branch in Torrance, California appreciate your loyalty and patronage with our products, and we do hope that your continued support will be enjoyed in the future by the new organization.

Fine. Discuss away -- in another newsgroup! This one is specifically for the code vs. no-code debate, and that is the primary topic here. You cannot exclude this topic in any thread you may start -- if I bring the code testing requirements into the discussion, I'm "on-topic" here, and there's nothing you can do about it. Sure, we discuss other things, like "gay" issues, but the code is always on-topic here -- so please leave out your feeble attempts to exclude it.

Cecil:

How could amateur radio possibly be "degraded" by the absence of people who don't think that participation is "worth the effort" of learning one of the most uniquely practical, effective, efficient, and universal non-voice communications modes? I say, if they think that little about amateur HF privileges, then obviously they should not bother with them. But why do you feel the need to be their spokesman/defender/designated whiner? If your friends don't want HF privileges, that's their choice, their concern. It isn't about *you* in any way. I'm pretty sure that if they knew that you were whining here on their behalf, they might even be a bit annoyed. These gentlemen are obviously mature and emotionally intelligent enough to accept their status as non-HF privileged hams. Who gave you the right to speak for them?

Ed:

You stated that we should discuss the "inarguable" requirements for Amateur Radio licensing. I listed those requirements which I thought were, in fact, "inarguable." Unless you care to argue with the need to properly identify each applicant, then please answer the question I "axed" you.

BTW, I use the form "axed" as a tribute to a particular group of Americans who speak in that manner, and whom, as a group, are protected by federal law from most of the responsibilities of citizenship, but granted superior rights and privileges. I feel that if saying "axed" is good enough for them, then it probably should be good enough for me. Do you disagree? If so, what do you have against this particular group of Americans? After all, I've heard people from this group -- even those with college degrees in professional positions, use the word "axed" instead of "asked." OTOH, I've heard other people from the *same* general ethnic origins speak perfect "Queens" English (the Queen of England, not Queens County, NY). So I be axing you, bruh -- word up!

> "And certain men came down from Judea and taught the brethren, 'Unless you are circumsized according to the custom of Moses, you cannot be saved.'"
> -- Acts 15:1 NKJV

The fifteenth chapter of Acts tells the story of one of the first and most important disputes in the new faith. After Paul's first missionary journey, many uncircumcised converts were becoming Christians. The old guard, the Pharisees who had become Christians early on, insisted that the new converts had to become Jewish proselytes *first*, and then Christians. What does this have to do with ham radio? Listen up.

The FCC (God) has decreed that a Gentile (slow code ham) can become a Christian (extra) without first being circumcised (passing a high speed code test). Many of the Pharisees (20 wpm extras) are horrified! Jerking aside their loincloths they shout, "We have done this since Abraham (Marconi) and Moses (HPM)."

The new converts were not allowed in the courtyard of the Temple (extra CW segment) or to eat with the Pharisees (check into extra class phone nets). But along came Paul. In the second chapter of Galations we see the dispute had come to a head:

"But when Peter had come to Antioch, I withstood him
to his face, because he was to be blamed..."
Galations 2:1 NKJV

Paul had in effect told the Pharisees to 'get over it', that the New Covenant was in effect with or without their consent. Many of them left in protest. The whole book of Hebrews was addressed to them. So how many OT's are there that will give up on ham radio, or continue to groan about 'dumbing down' and slow code? Will this religious dispute ever end?

I am a fairly new general class ham. I easily passed the 5 wpm test and solid copied the whole text. I have been more or less faithful in doing w1aw code practice as well as qso's. My solid copy speed is at about 15 wpm after 3 months or so. I copy the 18 wpm code bulletins pretty well. I have done some 'name rst qth pwr' contest exchanges at 25+. Will any 5 wpm ham who regularly *uses* cw stay at 5? Of course not, they will progress, at their own rates, up to their own levels of ability -- or, they will abandon cw.

This NG is not limited to the code-vs-no-code debate, Larry. Its charter is Amateur Radio policy. The impetus for creating it was to offload the iterminable debate from rra.misc, but in creating it, its charter was not so limited.

Well, I've had my empathy for the OT'ers and cw compared to having empathy for probably the most evil person ever hatched on this planet. It's not exactly a demand for an apology, but it is a bit of what we're talking about here.

Surely, as even handed as you try to be Ed, you can see that Len isn't
really interested in entering amateur radio. He has friends who are
hams, has had decades of exposure and has been posting here for years.

If he was truly interested, he'd have obtained a license by now.

I never got one nickel from my parents to float my ham gear. Back then
parents didn't bribe kids to stay on the staright & narrow, we got the
strap, I sure got my share. 'Course that would be a felony today. Heh.
>
Over the years in this NG I've tossed out a few posts which have
postulated that earning the Boy Scout Radio Merit Badge was a much
better technical test than was the FCC entry-level ham technical test.
Ya had to actually build and demonstrate a simple receiver which
worked then explain why each component in the circuit was there to the
merit badge counselor. Still makes sense as a requirement as far as
I'm concerned.

How would you test, for instance, for in-depth Packet or ssb
"knowledge"? Both are just a bunch of circuitry and/or software, there
are a gazillion ways to do both. EME is even worse in this respect.
There are no standards for any of 'em. How do you test if you can't
test against accepted standards?? Makes no sense.

Larry Roll K3LT wrote:

> How could amateur radio possibly be "degraded" by the absence of people who don't think that participation is "worth the effort" of learning one of the most uniquely practical, effective, efficient, and universal non-voice communications modes?

Vanilla ice cream may be the most uniquely practical, effective, efficient, and universal ice-cream in the world, Larry, but some people just don't like it. Don't you see the contradiction? If Morse code is as good as you say it is, it can stand on its own merits without an affirmative action program from the feds. If it is not good enough to stand on its own merits, it certainly does not deserve a stand-alone pass/fail exam.

> Who gave you the right to speak for them?

Most of these guys are my Intel buddies. Intel has an official policy called "assumption of authority". If one looks around and cannot find the person responsible for something, one is urged to assume the authority concerning that something. I am simply following the Intel cultural guidelines.

It's YOU with the ego problem Lenny, I have nothing left to prove,
I've done it all, you know, the old theme about actions speaking
louder than words, etc. All you have is words and nothing more.

>
>The agenda (as of now) for WRC-03 has 38 separate articles
>for consideration by adminstrations. Of those, 9 articles
>affect amateur radio in whole or in part. WRC-03 is two
>years away...how is that a "limited timeframe?"
>
The timeframe is not from now until then Lenny, the critical timeframe
is how much time they have to dork around in meetings. they're
prioritizing their agenda items and S25.5 is coming up 'way down their
list of priorities Lenny. Based on WRC history some of the more
important agenda items which make the list will probably be tabled too
because they ran outta time to deal with those.
>
>If S25.5 is such a "weenie piece of trivia" then why is morse
>code skill demonstrated by testing such an important subject

Whatta hypocritical crock!! Every one of your posts oozes anti-ham
radio venom Lenny. Are you aware of what you write or do you have some
clinical issues ib play?
>
>My desire is
>simply to have an old test element eliminated. Oddly, the
>FCC wants to eliminate it as well.
>
That's another total crock. Cite your source Lenny. The FCC could care
less about code tests now that they have gotten away from having to
deal with processing disability waivers. Whatever hassles over the
code tests still exist as far administration is concerned was
downloaded on the VEs eons ago.
>
>Elimination of the code test should not affect Kelly's license
>privileges. If Kelly keeps to a timely schedule of renewals,
>he will never have to take another radio test in his life. No
>worries at all about having to learn something new. :-)

So are the takealong State Department interpreters. The NTIA rep has

the same clout.
>
>Kelly doesn't realize that S25.5 was not specifically an agenda
>item for any US WARC or WRC agenda list, minutes, or
>mention until this April. So far the only mention specifically
>on S25.5 is the NTIA's draft paper.
>
And you're clinging to that for dear life. Heh.
>
I'll tellya what the deal just might be on S25.5 Lenny: The FCC
certainly has no stake in 25.5 one way or the other. Except that if
25.5 gets purged they'll have more work to do and likely a bunch of
hassles from hams again too which they'd obviously much rather duck.
>
The ARRL/IARU knows full well that no matter which way 25.5 goes
they'll get pilloried by half their membership. Which is why the ARRL
board has already declined to take a stand. So they all cut a deal:
Don't put 25.5 on the agenda, no work for the FCC and all of 'em can
point the finger at the ongoing treaty provision, "our hands are
tied", ye olde punt & deflect maneuver.
>
Ask me how many meetings I've been in where this strategy was
implemented. Probably invented by somebody in the ancient Greek
Senate.

The clear implication being that the reason it is growing on
you is that you are being dumbed down.

Stop it, Cecil, Dick's been paying very close attention; you're
just in bullwhip mode again. You've said there's no longer a need
for hams to know anything technical anymore, and made a big point
of it...several times. Clearly, you're all over the place, not
knowing what side of the fence you're on.

Regards,
Vince, WB2EZG

So that really confirms it. Anytime Cecil lands that hard on *Anything*
that means he sees it as fact and a real threat to his Agenda.

Ah, yes! And what, then, do you propose it should be renamed come the day, ans soon it will be, when virtually all hams are appliance operators?

Appliance Radio? Sounds much more accurate.

FOR THE ENTRANCE EXAM, VINCE, FOR THE ENTRANCE EXAM. After a person passes an elementary entrance exam, the potential for technical learning is unlimited. Why would you require children entering kindergarten to know as much as high-school graduates?

You and Dick are obviously still confused about what happens for testing and what happens after successful testing. The requirements are certainly different from what a ham should know after 20 years as a ham.

Dick, I am retired and I post on this newsgroup. Do you think that I
speak for all retired people? When I worked for Intel, do you think
I spoke for Intel on this newsgroup. You guys with your pro-code testing
agendas will do anything and everything to try to discredit anyone who
doesn't share your archaic views. What you don't realize is that while you
were arresting your development, the rest of the world grew up, made some
progress, and left you guys sitting in the sandbox of time sucking your
Morse code testing thumbs.

Ed:

Thank you. You finally admitted that one of my principle reasons for supporting the notion of progressive, multi-level code testing is that it does, in fact, produce a continuing supply of Morse-trained operators. The fact that I would get to work them on-the-air is, for myself, only a secondary benefit. The main benefit is that the Amateur Radio Service continues to have a significant number of hams available who can exploit the many benefits and advantages of the Morse/CW mode, for the good of the public who may, someday, be able to greatly benefit by the communications capability this skill will provide under severe conditions. You do agree that emergency communications is an important part of our service, don't you?

>He feels
>that someone else has something to gain by the affirmative action programs he
>opposes.

Well, that's pretty obvious, isn't it? Of course people will gain when they are able to receive jobs, government benefit, and any number of other unearned and undeserved social advantages, based solely on the fact that they happened to be born of a certain race, color, or sex? Affirmative Action programs are the ultimate form of discrimination. They permit discrimination against deserving, qualified people in favor of those who were born into a culture that has distrust, envy, and contempt for those who have worked hard to gain valid qualifications. Affirmative Action programs create a larger number of dependants who will not know anything other than servile beholding to the politicians who dole a meager existence out to them, in return for the political support that ensures their lengthy careers of power, prestige, and personal fortune. Yes, Ed, you're absolutely right.

BTW -- code testing requires effort, initiative, and motivation on the part of those taking the tests. Applying for welfare, or getting a job based on your secondary biological characteristics, takes no effort whatsoever. All that requires is a politician who is willing to wreck our society for the sake of staying in power a few more years.

BS, and if you're awake you know it. Larry and I have both said that since the 5wpm max speed they might as well just cancel code testing for all the good it will ever be.

What you don't realize is that while you
> were arresting your development,

Oh, yeah, Right, I've consistantly arrested the development of the ARS, by spending long years as a VE and getting in on most every new mode that has came along. Don't you feel even a little guilt spewing that crap? Our position is simplke - ham radio operators should equip themselves to use the most basic radiocommunications mode, which also happens to be efficient, the most easily implemented and useful with simple equipment in stark conditions. That you and other "advanced

```
technoligists refuse and refute that simple fact says way more about you
all than you care to admit, thus your constant effort to impeach our
integrity.  You're a sad case.

 the rest of the world grew up, made some

>it was already being viewed as a problem within ham ranks?

Why do you single out HF hams, Bill?

What I'm saying is this:

1) "Bad behavior" on the ham bands is much more of a problem today than it was 10, 20, 30 years ago. There has been a general decline in the on-air standards of SOME amateurs.

2) The behavior problems are worst in the 'phone subbands

3) There are a number of possible explanations for this decline:

A - Lack of enforcement
B - Bad habits picked up in other services and carried over into ham radio
C - General change in mores of society as a whole
D - Changes in technology make such behaviors easier
E - Changes in licensing requirements and other regulations

And probably more I haven't thought of

4) [The big one] Without a lot more solid data, we can't balme the decline on any one reason, or even a combination of them.

>>>With the FCC
>>>comments in the R&O, I agree that once the treaty requirement
>>>goes, the USA requirement will also. There will, of course, be
>>>an RM and NPRM, but that will be formality.

>>treaty requirement. With the treaty requirement eliminated, there is no
>>regulatory reason to keep the code test any longer". No NPRM, RM, R&O or
>>anything, since they have already laid the groundwork.
>
>I don't know if an RM is necessary (the RMs are, as I recall)
>input from outside the FCC requesting change. The FCC could,
>based solely on the treaty change, go immediately to an
>NPRM.

Sure - but they may not even do that. I don't think they are required to do so in a case like this, because they've already made it abundantly clear to any casual observer that the ONLY reason they kept the code test was because of S25.5. They said it "serves no regulatory purpose" other than S25.5. "Serves no regulatory purpose" from a government agency is the kiss of death for a

regulation so described..
>
>>Not saying I want that to happen, but I won't be surprised if it does.
>
>I believe some degree of public input/process would still
>be warranted.

Me, too, but I remain unconvinced that the FCC would be required to do so, given the amount of time and public input/process already expended by the FCC. FCC has already made its position crystal clear. Something like 57% of the comments to the restructuring NPRM favored continued code testing and at least 2 code test speeds, yet the FCC found NONE of their arguments in favor of code testing to be convincing - and they said so, and acted accordingly. You think they will suddenly find some reason to keep 5 wpm after S25.5 goes? I don't. Unless some radical new idea is proposed, code testing is a dead duck in the USA without S25.5. And probably in the rest of the world.

FCC has warned us at least twice. Do they really need an NPRM?

> Perhaps Phil K, our resident, former FCC barrister,
>could shed more light on the process.
>
Phil ALWAYS sheds light on the subject..

>knowing what side of the fence you're on.

The message I got from Cecil's post is that there is no need for hams to know anything technical to enter ham radio, but that it is a good thing that they do so. He also expects that many will go on to learn technical things about ham radio as they actually participate in it. Speaking for myself, I have learned far more from my activities in ham radio than I learned taking any of the tests.

A good analogy can be found in those who drive automobiles. There is no need for auto drivers to know anything technical about their cars, but it is a good thing that they do.

>Ed, you work for the ARRL. Everything you say here is going to be
>perceived as ARRL's philosophy,

Saying so seems to fit your agenda, Larry. Are you doing it in a hope that I will stop posting?

> because in these times, no organization would permit one of it's employees to access such a public forum without being able to invoke meaningful influence over the content of what that employee said there.

Tell you what; let's put it to the test. Send an email to Dave or Mark and ask them if they feel they have any legal right to censor my personal views on Amateur Radio. If they say anything other than as long as I do not use my position at ARRL to undermine ARRL policy, they cannot, and will not, censor my right of free speech. If they say that they do, I will buy you a lobster dinner; if not, you owe me another.

> And, as was drilled into my brain over and over during my military career and beyond, "Perception is Reality."

I have seen many a perception here that I think has very little to do with reality, Larry. That cliche is virtually without meaning unless we can agree that it applies only to yourself.

> The only logical conclusion one can draw from the perceptions gained here is that the ARRL no longer sees a radio amateur as anything beyond someone with a piece of paper in his possession.

The only logical conclusion you can draw is that Ed Hare no longer sees...

> All they (the ARRL) expect are larger numbers of people to send in their dues.

All he (Ed Hare) expects...

> Is this really true, Ed? If this perception is wrong, then why did you give it?

I gave my perceptions, Larry; you have seen them in your own unique way. Not surprisingly, it is a way that fits your agenda to a T. :-)

> Ed, I was a member of the ARRL before I became a ham, I will always be an ARRL member as long as I am a ham, and I will always encourage my fellow hams to become ARRL members.

What, you aren't interchanging Ed Hare and ARRL in this statement? Odd, I was expecting you to say that you were a member of Ed Hare before you were a ham. You obviously cannot separate personal opinion from organizational objectives, so I wouldn't really know what to expect.

Larry, if you expect folks to believe that ARRL would choose me as its policy spokesperson and tell me to go on rra.policy and spread the word, you are really losing touch with "perception." :-)

Sure I do. I just disagree with you that most emergency communications is carried out using Morse code.

If the goal truly is emergency communications effectiveness, it would be more effective to mandate that all hams maintain an operating station and that all hams participate "N" hours a month in emergency communications practice activity.

If the goal is for you to have Morse code stations to QSO, then ...

Brian, in my opinion, evolution suggests a slow change without significant change at any point. There have been, however, many occasions where ham radio did not follow that slow process. And it is those significant changes that I'm talking about.

> None of it has had anything to do with the

Well, you're certainly free to have that opinion. However, mine is different (as stated).

> And sure as hell there has never been any

Well, I certainly have not done studies, if that is what you mean by "established relationship." However, neither have you so you're opinion is no more "established" than mine.

Gee, I think that is what I said, Larry, when I said that we need to attract more of that type of person into this radio service.

> [snip] Code testing doesn't now
> (particularly at 5 WPM max.) and never
> DID have anything to do whatsoever with
> it's attractiveness to truly interested
> individuals.

How do you know that, Larry? I think the problem is a lack of agreement on what we're talking about. You seem to be focused on the HF operator - the person who mainly sits on the HF bands and uses the radio solely for communications (using whatever mode). I'm trying to point to the person who views ham radio as a means for experimentation

- the person who is more interested in the technology side (electronics, etc) than the communications side. It is that type of person who is going to be turned off by CW (for the reasons I stated in the previous message).

> All it did was discourage a few lazy
> whiners who are so fearful of possible
> failure that they never got over the
> requirement to learn and be tested for
> this practical skill.

Practical for what, Larry? I'm sorry, but I simply can't agree with you. CW is fun. CW is entertaining. CW is fine as a hobby. However, it has lost a lot of ground as a "practical" communications mode, if any ground is left at all.

> Yeah. What it has evolved into is a
> mainly consumer-oriented activity
> consisting of appliance operators who
> are more concerned with "keeping up
> with the Jones'" than learning any useful,
> practical communications skills like
> Morse/CW.

So what are we going to do about it, Larry? I'm sure you get great pleasure from whining about your precious CW, but how is that going to change anything? The shift toward the consumer-oriented appliance operator radio service started decades ago (as early as the 50's). In fact, I'm fairly certain your radio was purchased instead of made by you. So, what are we going to do to attract new, more technically inclined, people into this radio service? In my opinion, a good place to start is with Morse code - a required mode that is way past it's prime.

> What is keeping people with those skills
> and vision out?

We've already discussed that, Larry. These people have no interest in code.

> Code testing has never been a problem for
> all of the truly talented and technically
> proficient hams I've met since becoming a
> ham.

And how many more of that type would you meet if the code testing requirement was eliminated?

> If it's a problem for a certain few, well,
> there is no Constitutionally- guaranteed
> right to be a licensed ham, and there
> shouldn't be!

You're missing the point, Larry. It is not a matter of rights, or even what benefits them. The issue is what is good, what is right, for this radio service - what benefits this radio service.

> Dwight, I really wish I could visit your
> area of the country for an extended period
> of time to see the same things you're
> seeing. Since the advent of the Code-Free
> Technician class license, I've been a
> ham in Colorado Springs, Colorado, and Dover,
> Delaware. What I've mainly seen as new hams
> entering the service are ex-CB'ers looking
> for a more powerful and less chaotic
> alternative means of doing some good 'ole-
> fashioned PTT-button mashing.

And all I have to look at is my living room, Larry. Both my wife, and myself, entered ham radio after the code requirement was dropped. She is mainly interested in math and science, so radio is a hobby for her. However, I have a long-term interest in electronics and communications, so ham radio is very interesting to me. Neither of us would have gotten into ham radio if that code requirement was still in place. And I know for a fact that there are others out there with similar interests that view code as a barrier (less of a barrier with the tech license, but still a barrier if their interest goes beyond what VHF/UHF has to offer).

> Are you saying that eliminating the 5 WPM
> code testing requirement from HF licensure
> will put an end to "appliance operator"
> syndrome?

No, if you would have read the rest of that paragraph (instead of chopping out a single sentence), you would have seen that I was saying that we need more skilled people to balance out a radio service too filled with "appliance operators."

> [snip] And the sooner we kill it off for
> good, the sooner we will be relieved of

> the whining from people like you who view
> this requirement with terminal pusillanimity.

Larry, this is the first discussion about morse code I've joined in
almost a year (if not longer). If you call that whining, it is
nothing like your endless whining in defense of your precious CW.
You've become absolutely obsessed with the subject. In my opinion,
you need to get out of the house more often. If you did, you might
realize that the world does not communication in Morse code - there
are lots of ways to communicate and code is way down on that list.

>Why do you single out HF hams, Bill?

I don't except as to there be no more/less liklihood
of bad apples because of taking a code test vs not
taking a code test. Of that, the FCC has clearly stated
their opinion. Others seem to try to attach some
behavioral problems to the advent of nocode testing.

>What I'm saying is this:
>
>1) "Bad behavior" on the ham bands is much more of a problem today than it was
>10, 20, 30 years ago. There has been a general decline in the on-air standards
>of SOME amateurs.

The bad behavior today is no more/less than 10/20 years ago.
Go back 30+ and you have a more gentil ham population.
The behavioral problems have more to do with a change
in the general population, including hams, rather than anything
at all related to code testing.

>2) The behavior problems are worst in the 'phone subbands

Because that is where the "voice" can be freely
used. I wouldn't be surprised to learn that many
of those bad apples fully hope and expect that others
are listening that aren't part of the "QSO." I doubt
many people ever expect anyone to be routinely "just
listening" to CW contacts which takes away the "broadcast"
mindset if someone thought they'd key out a string
of obsenities in CW.

>3) There are a number of possible explanations for this decline:

Agreed.

>A - Lack of enforcement
>B - Bad habits picked up in other services and carried over into ham radio
>C - General change in mores of society as a whole

Agree completely!

>D - Changes in technology make such behaviors easier

??? - What about using voice modes has technology
changed over the year to make such behavior easier?

>E - Changes in licensing requirements and other regulations

What is the cause/effect?

>4) [The big one] Without a lot more solid data, we can't balme the decline on

That is because the requirements are not a "popular
vote" issue.  The FCC needs compelling and rational reasons
to sustain code testing.  They didn't get any in the comments.

>You think

Dick, I think we passed that stage about twenty-five years ago. I
see very few ham operators, in any license class, running home-built
radio equipment today. How many Extras do you know of that are not
using Yaesu, Kenwood, Icom, or some other commercial brand radio?

Go back 30 years and you had some FCC enforcement. That tapered way down about
10 years ago, and has only recently come back into visibility. The bad
behavior on the bands tracks FCC enforcement nicely.

> "hobby" service such as ours.

I don't see that the hams of my era, the mid 60s, could have done any real pioneering unless they, too, had knowledge and experience that went way beyond what was required for licensing. In no recent time has there been more than a few hams doing such true experimentation.

In reality though (as opposed to perception...), I don't believe what you postulate is true. There are more kit manufacturers now than there were in the 1960s. This leads one to the logical conclusion that there are more people building and expermenting, not less. Building is easier, not harder, so more people are doing it.

The bottom line, though, is that ham radio has not been a training ground for engineers for decades, if ever. It provides a valuable addition to the pursuit of an engineering career and degree, offering significant practical experience that is not found in an academic course, but any idea that a ham radio license, of any era, is equivalent to an engineering degree is preposterous.

>
>Really? :-)

Yes, really.

> I was commenting on the 1946 Project Diana
>experiment as the first demonstration of the capability of
>the moon as a radio wave reflector.

Why? What significance does that have to do with the QRP EME work that was being discussed?
>
>N2EY wishes to have fame of amateurs noted above such
>experiments because those experiments were done by
>"tax-payer funded professionals." [hack, spit, ptui on pros]

Where do you get such ideas, Len? I'm one of those "professionals".

This is an amateur radio newsgroup, so amateur radio activities are the main focus.

What I object to is unfair comparison between the spare-time self-funded activities of amateurs and the taxpayer- or profit-funded activities of military, government and commercial groups.
>
>N2EY bristles with righteous anger at anyone not of the
>amateur persuasion disturbing the self-delusions of radio
>pioneering.

"Bristles with anger"? Hardly. I simply pointed out your mistakes, Len.

> No problem. There's been precious little
>pioneering in radio by radio amateurs since WW2.

By your standards, hams don;t do anything worthwhile.

>Only
>the ones I named in a previous post...and those might
>be arguable.

Nonsense, Len. You are in denial bigtime.

>"Pioneering" is one of the chief articles of
>faith in an organization's publications, but the pioneering
>actually done was over a half century in the past.

Who was talking about "pioneering"? You seem to think that only the first try at something counts. That's simply not true.

> [Project
>Diana was done 55 years ago]
>
You keep repeating that, for some reason.

>Why the antipathy demonstrated against professionals?
>In here. Elsewhere.

There is no antipathy towards professionals, Len. I'm one of them. So are many of those who post here.

Why?

Why should anyone answer your questions when you don't answer others' questions?
>
>Perhaps it is because all of radio is interesting as a hobby
>to those with a technical bent.

That's pure bull, Len. You're telling others what they must like. Who made you god?

>Amateur radio is a hobby.

A hobby and a lot more. Fact.

>Some like to immerse themselves so deeply that amateur
>activities become a lifestyle. That is okay with me, but why
>the constant anger and resentment against professionals
>[of the "military-industrial complex" greedily consuming
>hard-earned tax dollars of ordinary Americans?] for not
>wanting to share some obsessive-compulsive complex?

I don't know what you are talking about. You seem to think that the term "military industrial complex" is a putdown. It was coined by Dwight D.

Eisenhower, who needs no introduction.
>
>It certainly seems so in here.

To you, any comment on your mistakes is an unacceptable "attack", but you reserve the right to attack anyone who posts here. Double standard.

>On one side are the stuffy
>ultra-conservatives extremely defensive in the preservation
>of the hobby started in their youth, holding to the status
>quo with all their might, fighting all usurpers, all the heretics
>threatening their belief systems.

Nonsense. Who are you talking about?

> On the other side are those
>who want some freedom, lesser restrictions than the
>"official" viewpoints, even rebels who don't hesitate to stomp
>on old, outmoded ways.

There is no radio service with more legitimate freedom than the amateur radio service. What you want is anarchy.

>This other side views amateur radio
>as just a hobby.

Those who take such a position are simply mistaken.

>The first side seems to think that it is more
>than a hobby, it is a lifestyle that must be followed at all
>costs, holding rigidly to tradition and belief.

More nonsense.

>The first side
>wants to lock in all possible hobby activities in unchangeable
>law.

Where do you get such ideas, Len?

> The second side thinks of it as just a hobby done for
>relaxation...with as much freedom as possible.

Define "freedom" in this context.
>
>I am not going to argue endless fly-speck details of Project
>Diana. Yes, I did mistype the website...and corrected it.

You mucked up a lot more than that, Len. You often make mistakes, then deny them over and over when corrected.

>Is it important that the Diana antenna have such-and-so
>many dipoles?

Yes - because the antenna size doubled. You claimed the antenna was "leftover" and "scrap", but in reality a lot of resources were invested in upgrading it to do the job. And the project did not succeed until the upgrading was done.

The antenna work was a big deal.

>Apparently to members of the first side who
>must have exactness in every sentence.

Then why do you make a big deal about the fact that the 5U4GB is a rectifier?

> I'm of the second
>side who simply thought it was a fine pioneering thing done
>by anyone and had actually seen the Diana antenna and
>tower from a Fort Monmouth bus in 1952.

I see. Then why all the resistance and denial when your mistakes are pointed out? Was Diana a radar system or not?

>No biggie at the
>time but the Diana project was definitely the first true
>demonstration of using the moon as a radio reflector.

For radar - not communication.

I think I understand. If one reads the history, it might, just might, turn out that the first true use of the moon for 2-way moonreflected communication was by hams. That would be unacceptable to Len Anderson.
>
>Someone had to be first.

Why all the fixation on who was "first"? The early bird gets the worm but the second mouse gets the cheese.

>In this case it was the greedy,
>"military-industrial complex" personnel actually paid (!)
>for their efforts...as if that were some major pejorative on
>anyone trying out an experiment or actually pioneering.

Why do you take offense to the facts? Where did anyone say what was done in Project Diana was bad? You use words like "greedy" - not me.
>
>Some time ago elsewhere I made a casual mention of
>the US Army Signal Corps "starting US military aviation,"
>more as a bit of gentle ribbing at some stalwart ex-USAF
>types. The amount of flak received was remarkable!
>"Couldn't have been true!" and "inconsistent with known
>reality" were the more gentle responses. :-)

Those were other people, not me. You want to lump all of those who disagree with you into one group that are all identical. That's called "bigotry", Len.

>Just the
>same, the first heavier-than-air aircraft contract and
>delivery in the US military was let by and received by the
>US Army Signal Corps.

Yup. They contracted with the Wright Brothers, as I recall.

>This seems to be the environment here. The "first siders"
>(the traditionalists, steeped in legend and glory tales)
>busy with fly-speck corrections, admonitions, and charges
>of "unprofessional errors" and "mistakes" that invalidate
>any viewpoint contrary to the first siders. :-)

Translation: Len Anderson wants his pearls of wisdom accepted without challenge, but wants to attack all who make the slightest mistake. When HE messes up, it's a "fly-speck", but when others do, they are fair game - for him.
>
>>I thought you knew everything about radio, Len. Guess I was mistaken.
>
>Oh, oh, a snarly comment! Shame!   :-)

But it's true.
>
>Never licensed in telepathy, I cannot know what N2EY is thinking.

Yet you constantly claim to know others' motivations and desires.

>I have some capability in radio design, operation, testing, and
>theory..

You do? Not that I've seen demonstrated.

>and am not afraid of destroying some cherished belief
>set by looking elsewhere for more data, especially in regards to
>radio regulations.

Haven't seen you do that, either.

>I know that is a "crime" according to some,
>very much so in regards to amateur radio and its devotees of
>the "first side."

No, you just keep on making mistakes, Len, and then get all worked up because some people won't accept your errors. Instead, those awful "fly specks" dare to point out your errors and challenge your mistakes. Horrors!
>
>FB on the fly-specks, N2EY, my fly-swatter is tired. Let me
>clean it and have the big bat ready for next time. :-)

I see. Threaten violence on those who dare question the all-knowing Len Anderson, Monmouth bus-rider.

Simple question, Len:

If a current Technician licensee passes Element 1 (5 wpm code) and gets a CSCE
for doing so, but does not pass any other tests or upgrade, does that
Technician licensee get any HF amateur radio privileges, or not?

N2EY

At a really basic level. The point is that Ohms law is a helpful thing for amateurs, in pursuit of their hobby regardless of level.

> > For this, some experience with Ohms law
> > (among many other [snip]
>
>   With my first paragraph in mind, the rest of your message (about

The rest of my message deals with what should or shouldn't be required, testing wise, for amateur radio licenses. I think you are trying to steer things in another direction here. Some amateurs might homebrew equipment, so it should be a requirement. Otherwise we need lots of levels of tests. Let's say I'm not into EME or packet radio. Should I not have to answer any questions about those subjects? Besides, in this hobby, how do we know what we are going to be into next year.

>   In addition, you should note that those who promote the "appliance

> license class twenty or thirty years ago built their own equipment at
> a rate higher than today's operators.

Dunno what they did. I was just a kid at that time. Don't even know how they could get this proof. Don't know how relevent that is to the discussion, either, because numbers of practicioners is not the basis of whether or not the questions should be included on the tests.

Without posting a date, your quotes are meaningless. I changed my mind around a certain date. I was consistent before that date and I have been consistent after that date. Quoting postings out of context is an immoral thing to do.

Of course, since you never change your concrete mind about anything, you are bound to have the same opinion of research physicists as you do of me. Do you still believe in a flat earth?

Adding the pre-existing contexts to my postings:

Seems to me, in this day and age, all an amateur radio operator needs to know (for the purpose of meeting entry level requirements) is operations, rules and regulations, and safety.

I would not disagree with you that it is not asking a ham too much to know BASIC electronics theory (after he has been a ham for a certain length of time).

I can prove that you said anything in the world by quoting your postings out of context but I have too much integrity to do so. Too bad about you.

To summarize my present position: At the entry level, a ham needs to know only enough to get by without causing grief to himself or others. That would include knowledge of operations, rules, regulations, and safety. This was a change from my previous position.

After a person has been an active ham for a time, he should have self-taught himself everything a mature ham radio operator needs to know. This would certainly include basic electronics theory.

In short, have a set of minimum requirements to get into the school of ham radio and learn something while you are in the life-long school of ham radio. My only position change has been in the nature of the entry level requirements.

W1RFI wrote:

> The message I got from Cecil's post is that there is no need for hams to know anything technical to enter ham radio, but that it is a good thing that they do so. He also expects that many will go on to learn technical things about ham radio as they actually participate in it. Speaking for myself, I have learned far more from my activities in ham radio than I learned taking any of the tests.

Yep, I learned virtually everything I know about ham radio after I got my ham radio license. It was a good way to go. What Vince is attempting to do is something he obviously learned from Clinton. Take postings out of context and out of chronological order and try to make someone look inconsistent.

I once believed that all hams should have equivalent knowledge to a EE after his sophomore year. When I thought back in time and considered my own experience, I changed my mind. Now Vince is mixing up the chronological order of my postings. Since he never changes his concrete mind about anything, he views a rational open mind as an abomination.

Exactly true for the Morse code requirement. I never thought I would
hear you admit it. Otherwise qualified people are being kept off
of HF because of the Morse code affirmative action program.

>using Yaesu, Kenwood, Icom, or some other commercial brand radio?

Ah yes, another member-in-waiting of QCAO! You don't get around much, do you?

While I can't remember the last "fully homebrew" shack I saw (probably KG6AIG back in the 60's, and even Luis had *some* commercial test equipment items lying about), it is extremely uncommon to find a shack where every item is commercial (or in it's original commercial state.) Homebrewing and modification to commercial designs is especially alive and well in the QRP, contesting, satelite, and microwave communities.

Yet I keep seeing all sorts of "hints" here that amateur licensing should not require a technical examination. Even W5YI, Director of NCI, has publicly proposed that only Extra exams have technical content. Now I see Larry Roll, among others, joining in that chorus. I think this is an idea which should not be tossed aside lightly, it should be tossed aside with great force!

The QCAO (Quarter Century Appliance Operators club) and ASSOOBA (Amalgamated Simple Shacks On Our Belt Association) would love it, but this idea would put our service on an immediate slide into nothing more than another consumer orientated Family Radio Service, and the consequent abolishment of Amateur Radio.

The *single* unique element which differentiates our service from all the other radio services is our authority to experiment, build, modify, and generally tinker around and operate equipment which is not type accepted. The "technical" aspect of our hobby comprises 3 of the 5 reasons (paragraph 97.1) for the existence of the ARS, and removal of this requirement for licensing would tear the heart and soul out of the hobby.

If amateurs were to be licensed without any requirement for electronics knowledge, then it follows that type acceptance of all amateur equipment would be a requirement for sale. Used equipment, if sold to "no-Tech" amateurs would need to be recertified and "mod-free", and repairs could only be accomplished by FCC-approved service facilities. The cost of new equipment would rise to commercial-service price levels, because of type-acceptance issues, and most vendors would probably leave the market.

Sorry, but you guys are out to lunch with this cockeyed notion.

Code-Free, then Tech-Free .... what next, license free? CU on eleven, good buddy.

73, de Hans, K0HB

It's human nature, Dwight. People who lose wars spend the rest of their
lives agonizing about it instead of getting on with their lives.

It may work in the opposite direction as it did for me. I got my ham license and then was so curious about how my ham radio worked, that I went on to get a degree in EE. In other words, I became knowledgeable of electronics after I got a ham license, not before. It was a good way to go. I believe it still is a good way to go.

> crap?

Nope, since I wasn't talking about that. I was talking about your personal development. Your attitude is regressive, not progressive. Time is uni-directional, Dick, and is carrying you, protesting, kicking, and screaming, into the 21st century. The river is flowing faster than you can swim upstream.

Yep, they've tried similar underhanded techniques to shut me up. I should
shut up because I never passed a 20wpm exam. You should shut up because
you work for the ARRL. Someone else should shut up because he doesn't have
a ham license. They think they have discovered something new, "Divide and
Conquer", not realizing that technique has probably existed since before the
beginning of recorded history and you and I are savvy about it.

N2EY, for one. Never owned a piece of ham gear that wasn't made in the USA,
either.

Where do you put kit rigs on the scale of "homebrew" vs. "appliance"?

K0HB wrote:

Yup - but it's not limited to them. There's the whole field of antenna building, which is homebrewing. There's the "glowbug" and "boatanchor" folks, who build and restore gear based on older technologies. Many BA stations that appear to be composed of 100% manufactured stuff are actually the result of painstaking modification, restoration and repair by the ham who owns them.

Here at N2EY, not only is the HF rig 100% homebrew and home designed, but so is the antenna system, the power supplies, even the radio table and shelves. The station clock was made from the parts of three junkers. The test gear is part homebrew and part restored kit and military surplus.

Only the telegraph keys were bought in ready-to-use condition.

You want some JPGs? Just got the digital camera working.

I was somewhat knowledgeable before I got the license, became more knowledgeable in order to upgrade, then got even more knowledgeable over the long haul.

Jim Kelley had an incoherent moment and blurted out:

> The point is to illustrate the logical error that results when
> assuming there is such a thing as a "necessary" requirement.

When I applied for my Conditional license, and later when I upgraded to Amateur Extra, the FCC said that it was necessary for me to meet some requirements, such as passing a written test and a Morse test. Are you saying they lied to me?

Good luck on this one now!

Apparently they disagreed with Jim Wayda who said:

"CW is analogous to a hand crank. It is no longer necessary."

I believe that is your view as well, is it not Mr. Hans?
So either you tell me whether the FCC lied, or go bother somebody else.

Jim Kelley got huffy and blurted out:

>"CW is analogous to a hand crank. It is no longer necessary."
>
>I believe that is your view as well, is it not Mr. Hans?

That's not my view at all! I think the Morse test may be "no
longer necessary", but CW is absolutely necessary for me to
win the November Sweepstakes CW weekend again this fall.

>So either you tell me whether the FCC lied, or go bother somebody else.

Oh, I see, "Just because I am willing to debate on rrap does
not mean that I am here to learn any truth contrary to my beliefs."

As you wish, cyber-God.

Huh?? "Sending" tests are basically irrelevant, I have yet to run into
anybody who can't key at least as fast as they can copy - except when
some physical disability enters the picture. The code tests were
supposed to consist of one minute each of perfect copying/sending at
20wpm. I don't think I managed to ship ten characters at 20wpm before
God cut off the "sending test" by simply saying "OK, that's fine".

Go for it. I just passed my technician's test a couple of weekends ago.

I applied for a vanity callsign using my initials as my first choice. My second choice was K0FCW, the callsign of my high school teacher back in the 60s who introduced me to radio.

I half-way hope my first choice isn't available.

I dunno Hans,

Normally, I'd be calibrating the ole' troll-o-meter, but these aren't normal times anymore. I can't even say it's about who did or didn't author it. I like CW and I really don't want to see CW go the way of the dinasaur either, but there is a point to this story that Aesop'd be proud of. Things change...sometimes for the better, sometimes for worse, however change remains the only true universal constant. (death & taxes notwithstanding)

>"the shots get called" by the Directors, who are mostly elected by the life members.

For now, Hans...for now.

Hey Jim, that's how I became a member of MENSA. I even scored higher on the exam than the MENSA member with whom I made the bet. :-) Not only did he have to pay my MENSA dues for five years, but he had to endure my smirks.

I can teach Ohm's law to my three year old grandson. "The Indian sees
the Eagle over the Rabbit." Exactly what good does that do?

Seems the FCC also knows from long years of direct experience that there
are always more than enough hams on FM and SSB who are active, informed,
and capable of handling emergency communications such that no Morse code
is needed.

Those all fall within the general field of electronics. The reason my
ham ticket got any particular attention was because it indicated that
I had some skills or interest or whatever ya wanna call it in a
"parallel" discipline which is not my professional field. In any event
it was a LONG time ago!

Trouble is, Dick, that you told, in so many words, that all the no-code hams and all the potential no-code hams are lower than the lowest layer of whale $hit in the deepest part of the ocean.

Actually, I use toilet paper instead of my hand, Dick. Do you really
use both hands? Yukeeee Poooooh! That gives a whole new meaning to,
"being glued to your CW paddle".

My dictionarys all have the correct spelling.

I claim that I deliberately misspell and use poor grammar so as never to
be asked to be newsletter editor.

Most of them probably wouldn't go that far. They just don't like being
subjected to a hazing ritual by people inferior in electronics knowledge
to them. It's the religious circumcision Jewish/Christian argument all
over again.

Yep, too bad I couldn't BS the IRS into accepting less than the half million dollars I paid in income taxes during the last few years I worked for a living.

Darn, that should read: "... such that no Morse code testing is needed."
Obviously, Morse code is needed. I need it.

I get it. :-) Never would have even thought of using just my hand.

Such a clever fellow.

Refering back:

Cecil said:
> Many, many professional engineers
> and scientists simply do not think Morse code is worth the trouble
> and effort, and therefore think ham radio is not worth the trouble
> and effort.

Then I said:
How many think so now? It can be "a lot of trouble and effort" to wipe
3 times too, but it's usually worth it.

I still think it's worth it - on both accounts. Your mileage may vary.

I think it's an excellent idea, if it's what you want to do.

>In my case, I'd go from
>my 2x3 call, to a 'quite old' 1x3 W7 call if I took my grandfather's old
>callsign.

One of the reasons for the "vanity" callsign program was so that callsigns could be kept "in the family" if relatives so desired.

>
>In a way, I think this would be kind of neat, kind of a memorial to him,

God bless him.

>In another way, I
>think this might be a little cornball, and maybe a little confusing
>(possibly annoying?) to some to hear a thirtysomething's voice/station
>ID'ed with an 80-year-old's call.

Not at all. The way it is today, anybody with a Tech or higher license can buy an unassigned 1X3. Doesn't even have to be the "right" callsign district. "Vintage" has nothing to do with it anymore. I know old-timer Extras with 2X3s and new-out-of-the-box ones with 1X2s.

>
>Opinions?
>

Do what feels right to you. Taking his call would be a tribute to him, and would keep his memory alive. Sure doesn't sound cornball to me.

>You distort the truth, sir.

Why don't you just say "Hans is a phucking liar."? At least I could give you credit for having some balls.

My view is that CW is certainly necessary, but perhaps the Morse test is not.

That view is consistent for at least the last 30 years.

Good luck on this one now.

Dwight:

I don't see any relationship between code and technical skill, either!
In fact, virtually 100-percent of the most technically-involved hams
I've known, with graduate degrees in math, science, and electronics,
have ALL been code proficient, CW using, CW loving Amateur Extra
class licensees. So, if the code testing requirement is somehow a
barrier to technial advancement, they seemed to have beaten the

rap somehow!

Sure it's a digital mode in the broad definition. The only real
differences between cw and the rest of the digital modes used in ham
radio is that cw is not necessarily machine-generated and it can be
run at widely-variable baud rates. And multiple channels of cw can run
at different baud rates within the same bandwidth. I gotta see the
computer port which can do that stunt.

I think you're thinking of the normal serial ports. CW is so slow that it is easy to 'bit-bang' and check if something is on or off and simply use a loop to time it. My poor old (now dead and buried) 386SX could check a bit on a port 140,000 times per second using compiled basic. Even at 1000 wpm, it would be easy to see if an 'on' time equated to a dot or a dash and if an off time was so short you were still within a character (character not completed yet), between characters (go ahead and print the character), or so long it was time to print out a space (between words). I had a morse code program that could receive morse on my Heathkit H-8, built in the winter of 76-77. That, however, was written in basic and was so sloooowww that it had trouble copying much above about 15 wpm, making it utterly useless for me. Now, however, it is in vogue to use a soundblaster for everything. In any event, the serial and/or parallel ports don't figure into it much anymore. Of course, you can get down to the machine level and use one of the hardware lines to the serial port to send/receive - but I think (I'm not sure) that you might have to do it under dos - windows would probably have fits.

No wonder you are completely clueless regarding the written tests. If you teach your three year old grandson "The Indian sees the Eagle over the Rabbit you've taught him something besides Ohm's law, for sure.

Cecil is wrong, on all three counts. He is not a raconteur, I have always owned several dictionaries and the word 'raconteur' is straight out of the spellchecker.

>in doing in amateur radio. It is really refreshing that you clued us in
>as to what you'd like to do.

I am interested in amateur radio but I am not interested in Heil's
definition of amateur radio. Heil doesn't understand that. Heil
cannot understand any opinion that is different from his.

>> Legal amateur radio activities require passing a license
>> exam. For under-30-MHz privileges that exam requires
>> a test for morse code skill. I think that code test should
>> be eliminated...so do many others including the FCC.
>
>Not exactly true, is it?

It's all true. For the FCC's opinion, see 90-53 and 99-412,
Reports and Orders written nine years apart.

>I don't expect that anyone will have to worry about you invading any
>turf for some time to come.

I'm not after "turf." Those who think they have turf will goad
others as if they "owned" that turf. Heil has demonstrated that.

>Even after you've obtained your piece of
>turf, you may have to change that attitude to find a few folks for a
>contact.

Heh. "Threats!" I would be surprised to find a VEC that would
give me an honest test for an amateur license based on what
I've said in here or elsewhere! :-)

"We don't want 'your kind' in the ARS!"

"You #$%, I won't even test you with those kindsa attitudes!"

Those two paraphrased sentences are what some former VEs
(one of them may be a current VE) have said in here.

Yup. Motivation Officer title sticking out, neon-lit. All to get a
simple radio license for a hobby. "Change your attitude or
nobody will talk to you!" :-)

writes:

>Let me ask you, Len. Do you believe that tens of thousand of others
>tried and failed to enter amateur radio through the years?

Yes.

It's not a provable statement since there are no records of such so the PCTA will no doubt crow and repeat the mantra.

>I don't think the "why a code test exists" needs be addressed as part of a statement that large numbers of people have successfully learned morse code.

Tens of thousands of people learned to ride horses for basic transportation. No longer required. Tens of thousands of people learned manual cabinetry without machines. No longer required. Tens of thousands of people learned many different skills in the past and those skills are no longer needed. The same is true for morse code in a hobby activity. It is no longer needed as part of the FCC's regulatory purpose.

>Does the issue itself matter in this time when the morse speed for all classes of license have been dropped to 5 wpm and are likely to be dropped altogether in several years?

Yes. The morse code test is still there. There is no guarantee that S25.5 will be changed, modified, deleted or even discussed at WRCs of the future.

>When that takes place, what excuse will you have for not obtaining the piece of amateur radio turf that you so obviously covet?

I covet nothing. I am only debating the "need" for that precious morse code test with those who have already passed such a test. Those will never ever have to take another morse code, test yet they make macaw noises about their tested ability.

>Your enormous ego has been bruised. I've never ever felt insulted or slighted though I've worked professionally in communications.

Heil mistakes persistence for ego. Heil has an enormous ego, ergo everyone else has one. Too much self-indentification. Every time I've mentioned professional experience everyone seems to take affront at such and immediately take to personal insult mode. Radio is radio...except in amateur radio where it is different.

>Maybe some have just gotten tired of your "Single Wing Anderson-There I was at 10,000 feet with both engines out" tales.

Sorry, I've never claimed any flying ability.   :-)

>You seem to have a gift for pissing people off.

I specifically target the ego-driven, "I know what is best for you" group...or the "I've been in ham radio for yaddada years and know what is best" group. It works.   :-)

>> That pretty much covers most of the ground on postings from
>> those who are dead-set on keeping the morse code test in US
>> amateur radio and have been for the last four years. Some more
>> could be added, of course, but the above represents a synopsis
>> of general posting by the PCTAs.
>
>...as seen by the self-appointed advocate for morse code testing
>removal.

Everyone who takes a stand against something is "self-appointed."
:-)

However, all the opinions of the PCTAs listed are borne out by
simple retrieval of archived messages.

>You might not believe this but loads of motive shows in what you write
>and the way you present it.

Awww...is Heil next going to write "nobody will like me if I'm not
nice?"   :-)

Clue: This is debate about a highly-charged, very-personal test
requirement. As such it is easy to lose debate rules. The
PCTA have consistently done so, reverting to personal insult
when they were not able to counter any NCTA's statement.
PCTAs seem to think they have some God-given "right" to
adulation because of passing the morse test. To hear them
talk or see them write they are Jesus Himself come down to
"save" the NCTA heathen. Heil has to cross his legs because
I have only one nail left.
:-)

Heil seems all upset that others laugh at his ideas and viewpoints, virtual sacred icons delivered up as the original tablets sans benefit of burning bush. The burning in this case is Heil's own ego exploding at the temerity of inferiors taking him to task. :-)

>You have no credentials as a radio amateur.

"Papers! Papers! We demand Papers!"   :-)

>("Let's see, I have my sailboat and my book on sailing. Time for a
>little cruise around the bay")

I apologize for not staying in the sacred physics rules of amateurism wherein amateur radio physics is "different" than radio physics of all other radio. I keep forgetting about that.

According to FCC regulations, the US radio amateur is allocated 9 frequency bands on HF plus 16 more above 30 MHz. Those bands above 30 MHz constitute 99+ percent of all allocated amateur band space. Has Heil ever worked ham bands above the 70 cm amateur band? Or has Heil merely read of such things in an amateur magazine? If the latter, how can Heil claim such "superiority" in things about amateur radio if all he did was "read about it?"

It would seem that Heil's entire amateur experience, at least from what he writes, as being entirely on HF whose total bandspace is less than 1% of all allocated amateur bandspace.

Strange mathematics. Less than one percent is "everything" while more than 99 percent is "nothing." Must be the "new math" by some long-timers. :-)

>How has your First Amendment right been abridged.

Some long-time HF amateurs are very busy chipping away at the footings of that bridge. :-) [going to take them a long time before they do any damage, though...]

>Did you make your comment to the government?

Yes. Has another long-timer attempted to quash that? Yes.

>Have you been prevented from posting your
>long, pontificating posts here?

"Long, pontificating posts?" Some lengths were on par with others' long pontifications which seem to be cribbage from "official" Handbook and amateur mythology of motivation, purpose, and desire.

>Do you mean that if you become the
>object of ridicule, your rights have been taken away? I don't believe
>you.

"Ridicule." Ridicule is a common tactic in computer-modem communications. It extends from the "you don't know what you're talking about!" pejorative non-reply to the officious, arrogant, superiority-loaded "you don't have the 'credentials' to say anything at all!" commentary from the ego-bruised. Not a problem to me to recognize such, nor by others.

These pejorative (over or implied) non-replies are given by those who have "claimed turf" and thus "own" the "rights to speak" even when such do not have the "credentials" to put down others. But, the "turf" claimants are highly irritable when their egos are the least bit bruised, their virtual "wounds" no doubt pain them greatly, and they must fight all those who challenge them. I've seen it before on other things, keep seeing it here as elsewhere. Virtual wars. Over what? Ego bruises. Threats to self-glorification. Pfui.

Discussion of policy in regard to federal regulations, changes or retentions thereof, should be handled in a non-personal ideological basis with an eye to the future. As to amateur radio regulations it would seem to be such an immense self-identification that the only ideology is the personal accomplishment, the egos inflated beyond proportion to the object of discussion. Few seem to bother with any thoughts about the future (I've counted only two in here, possibly three who have even considered the future for others). The rest are fixated on themselves as the role-model for others, what they have accomplished, what they have done, the glory of their long-tenure. In short they "know what is best" because that "best" is what they, themselves, have done. There's enormous egocentrism in that viewpoint. Egocentrism is not a valid credential for policy decisions that affect the future.

>> full power into big directional antennas working some distant
>> island?
>
>You said you weren't going to do any DXing on the amateur bands. I just
>assumed that you plan to do your DXing elsewhere.

Heil's imagination is verging on the psychotic.

I said "I have no interest in DXing [by radio]." That's true. I do not have any interest in DXing by amateur radio. Maybe, just maybe I might have an interest in interplanetary DX, sparked by another radio amateur, George O. Smith, and his writings of the 1940s and 1950s. As a non-amateur I've communicated with a station ON the moon. Heil has not done that. Heil is cannot yet do that as an amateur. :-)

>You can play Walter
>Mitty with any ham radio scenario you like. You can handle imaginary
>traffic, engage in imaginary rag chews, chase imaginary DX or work
>imaginary meteor scatter. Please yourself!

As I said, Heil's imagination is getting close to psychotic.

All those things are fun and interesting for others. Excellent for them. They are not the justification for continuation of a morse code test for an amateur radio license.

Amateur radio has enormous opportunities for fun and experimentation other than the "official" activities listed in every amateur radio periodical. Heil's imagination cannot extend beyond those "official" and "approved" activities, therefore Heil thinks everyone else thinks the same.

>> I could continue further in modes and methods not allocated
>> to amateurs but that would be passed off as "not applicable
>> to ham radio" by those who have no clue at all of the rest
>> of the radio world.
>
>You could. If you did it in an avuncular style, didn't get too windy
>and didn't talk down to your audience, the stuff would likely get a warm
>reception.

Heil would still demand "credentials" to be presented if this were to an amateur radio audience. :-)

>Your parting shot at "those who have no clue at all" makes
>that all seem highly unlikely.

Ah, but the "credentialled" in here have the official permission to use "noclue" because of that "credential?!?" Of course, they do. They've claimed turf in amateur radio and thereby "run" it, can use any manner of address with impunity. :-)

I've stated that the US military has used FHSS operationally since 1989. In the SINCGARS family of manpack and vehicular radio use. I've given websites for more information on that. Many long-timers still think that the US military uses old WW2 radio sets, uses CW for communications ("behind enemy lines") in the field. They have no clue about spread-spectrum modes and seemingly don't care. They have no clue.

There is a very long list of what can be said about radio amateurs' knowledge of the rest of the radio world. Too long. That is very unfortunate since the rest of the radio world has some interesting modes, some of which could be adapted to amateur radio.

>> >> Eliminating the code test for a US amateur radio license should

>
>You really are a squirrel. It amazes me to note that you immediately
>equate "effect" with "emotional disturbance".   Does that mean that the
>moon has an emotional effect on the tides?

I made a sarcastic comment. Heil became more upset. Poor Heil.

How does eliminating a code test from any US amateur radio license examination affect (or effect) any already-licensed amateur Extra? Let's look at the possibilities:

1. No expected future testing of any kind provided renewals are made in a timely fashion...grandfathering clauses would be done (as in the past) for protection of the already-licensed. The effect is nil

2. Accept it and move on with the hobby activities, welcoming newcomers.

3. Great emotional upset at perceived wrong-doing by the FCC due to newcomers not having to do as the Extras did. The resulting calumny would contine for decades, spreading to future generations.

From Heil's postings so far, it is a sure bet that (2) would not be operative. :-)

writes:

>I asked questions. If you don't want to tell me, why not tell the
>USARS?

I have explained before, repeated it. The entirety of the US ARS
does not need to know "motivation" from anyone interested. The
interest should be enough...except to those who think they are
some kind of "boss" of the US ARS.

>I haven't demanded that you answer, Len.

On the contrary, Heil's persistence, psychotic imagination has
demanded an answer that will suit Heil.

>Just say that the
>questions make you feel uncomfortable if you like.

Demands are only "uncomfortable" in the sense that the
demands are not required of anyone interested.

>> As I've said some while ago in here, "it might be nice to have an
>> amateur radio license...for another hobby."
>
>What's holding you up? You also told us that you were going for an
>"Extra out of the box" when the new licensing regs were about to be
>introduced.

I did? Seems to me I added a qualifier preceding that statement,
namely that "IF I decided to get one." Is there something "wrong"
with getting the maximum-"upgrade" class license without first
going through all the "lesser grade" classes?

Just what is holding Heil up from upgrading to being a human
being instead of officious radio god?

>Aside from a "time in grade" requirement for the Extra years back,
>nothing has stopped anyone from starting at any class of license he
>feels he can pass.

Heil forgot the devotion and motivation so "necessary." :-)

>As far as I know, you are the only person to use
>words like, "guild", "craft" or "profession".

No, but I am one who has repeated that the most often. :-)

>These classes of
>license--are you telling us that the only thing that sets them apart is
>a code test (the only thing you advocate doing away with)?

I'm not telling anyone anything that isn't in regulations. The FCC states that a Technician class license needs no code test, but a code test is required of a General or amateur Extra class.

Is Heil trying to manufacture another "dispute?"

>What you call tales aren't that at all. Are you one of those guys who
>dismiss the magazine coverage of very young kids passing an amateur
>radio exam as manufactured?

Yes. But I dismissed the ARRL's coverage of the six-year-olds who got Novice and Technician class licenses...and their passing. I disputed the language comprehension of such six-year-olds being capable of understanding the questions. Nobody went into six-year-olds' comprehension skills but rather focussed on the passing of the tests and the cutesy story.

They might have been precocious young geniuses...or they might have just memorized enough to pass...or they had some things "explained" during the written test, something which is not legal. Yes, I'll say flat out that those six-year-olds had a "manufactured" test passing.

>What about this idea that those interested in becoming hams "should"
>enter as youngsters. Even when I held a Novice ticket, I ran into
>Novices of all ages.

All the tales told in here concern entrance into amateur radio during teen years as the only way to "really get into amateur radio." Those few who post that got into it in adult years either were military-trained in morse or they got no-code-test Tech licenses. The latter seem to be shunned as not being "real hams."

>... Is it because it would be impossible for you to start
>as a youngster?

Irrelevant. "Getting the young" into amateur radio is an old, trite slogan. Youngsters are very impressionable in teen years, can be "imprinted" with goals, truth, falsehood, or whatever. That's elementary psychology 101.

If amateur radio is such an "important" thing, it would seem better for amateur radio that it should attract newcomers of more adult years. It is doing so now, but the overwhelming majority are going for the no-code-test Technician license.

>But amateur radio is one place where morse use is alive and well. The
>mode is used extensively.

By the ARRL's own poll, the best "extensive use" is second place behind radiotelephone and that second place is on HF bands only.

>Why shouldn't ham radio be the last place to require code testing?

Why should it be required in the first place?

The code test has always been in place for an amateur radio license. In the beginning and the formation of the first US radio regulation agency (1912), every other radio serivce used morse code mode. It made sense in 1912 to have all radio operators demonstrate skill in a common OOK spark mode. As the radio world evolved and moved away from morse mode, it was no longer needful as a regulatory test. It might have been kept there by retired radio men who preferred to have a place of radio recreation or those laid-off morsemen who could not learn the newer radio of the vacuum tube era.

There has never been any manual operator test of any kind for amateur radio license tests except code. That is not a qualification to keep morse code testing.

>We already know that you have a problem when anyone asks you about
>motivation.

We already have a problem with patronizing, arrogant demanders of motivation and desire to "prove" something to them. No one need "prove" anything about desire or motivation to anyone... except the control-freaks and those who demand all "do as they did" or become "lesser" humans. Pfui. Go suck a hot 807.

>> without passing a minimum number of correct question answers.
>
>You asked a question. I provided an answer. Nowhere in my answer did I
>stipulate that it matters to the FCC or VEC.

Strange. "It doesn't matter?" Can exam tests be passed with
less than the minimum number of correct answers?

>It would seem that anyone with mild interest in something would have
>become a participant over time. Let's say over several decades.

Dang, the Motivation Officer has asserted hisself again!   :-)

>That the FCC staff isn't required to be a radio amateur doesn't matter a
>whit. No one at the DMV is required to have a driver's license either.

True, but I don't know of any DMVs that demand skill in hand-
cranking a starter or knowing how to set the spark advance on

Model Ts. Demonstrated morse code skill is akin to hand-cranking and spark advance.

>> Heil has NO authority to officiously demand "motivation."
>
>Officiously demand? You're out of your ever-lovin' California mind.
>Do you mean to tell me that anytime someone asks you a question, you
>take it to be an officious demand?

Nope. But if Heil asks the question or even makes a statement,
it's winning odds that it will be officious. :-)

>Look, Len, I'm involved with amateur radio just about every day.

Good for you. Now why are you here typing when you could be
directly involved on the air? :-)

>You are a sidewalk superintendant.

Wrong analogue. I've petitioned the folks who set the "building
codes" for "sidewalks." I've designed and built and walked on
other "sidewalks."

>I don't really care if you never obtain
>a license but if you want it, you'll have to take the steps toward

No sh*t?   :-)

>If you'd like to spend the
>rest of your life gnawing on bones here, go to it.

I thought I was... :-)

>If it pleases you to
>describe me as a control freak, have at it.

It doesn't "please me" to call a control freak a control freak, yet
one has to.

>You can complain to the
>ultimate amateur radio control freaks, the FCC.

The FCC is the US civil radio regulation agency. They aren't
"control freaks" and, by complaints of many in here, don't
seem to do a lot of "control" of amateur radio. On the other
hand, the FCC Enforcement Bureau has an enormous listing
of actions taken on infractions in other radio services.

>> Heil has a truly bizarre imagination. He should have stayed
>> with guitar analogues.

>
>Yeah. I note that you didn't comment on my statement though. Bizarre
>is prattling on about demanding changes to something you aren't involved
>in.

Really? How is it "bizarre" to talk about removing a regulation which will NOT change anything for those already-licensed, will NOT remove any privileges, will NOT change their titles, status, or privileges?

Bizarre is the already-licensed officiously demanding "pass the tests first before you can even talk about something!" Bullshit. Bizarre is the self-appointed Motivation Officer demanding some kind of demonstrated desire and motivation when he has no such rank, title, or "credential" for the office.

>Yep. I know all about "Heil" and the FCC. I also know your views on
>morse code testing in the amateur service. I asked you what's it to
>you?

No one knows Heil's motivations on keeping the amateur race pure to his liking. Why is that? What is it to Heil if someone is interested in, but not interested enough, to pass some kind of "motivational resolve proof" test?

>> No newcomer, repeat NONE, is "answerable" insofar as
>> "motivation" to Heil.
>
>So I take it that you don't like being asked why you are interested in
>something which you frequently bad mouth and in which you are not an
>participant.

Kiss my yes, Heil. You demand answers through intimidation and bad-mouthing of others and then demand demonstrations of desire, motivation, and resolve. Heil has no such authority to demand everyone do has Heil says nor to follow in his exhaulted ways.

I've already said that amateur radio is a fun and interesting hobby with lots of potential...but it is not the raison d'etre for everyone nor should it be (to sane people). It is not controlled by those who have a lot of time-in-grade yet some of those individuals assume such control any way they can. That has been amply demonstrated.

>> >Do you speak for someone other than yourself?
>>
>> Yes, loosely so. Here are some names, surnames altered
>> to avoid them being a target for Heil's "motivation" barrage:
>>
>>   John Doe, June Doe, Juan Doe, Harry Doe but not his
>>   daughter Cookie, Phil Doe, Shinjiro Doe, Arpad Doe,

>>   Quan Doe, Bill Doe, Stan Doe, Dean Doe, Jose Doe,
>>   Cheng Doe, Dave Doe (but not his dog the Doe-berman).
>>
>>   [not in order nor are all related...there is no "Dosey"]
>
>I'll take that as a "no".

Heil has to take it as a yes. I changed their surnames on
purpose, partly as a levity break, partly to simply protect
them from abuse from the control-freaks who want all
"disagreeable" (to them) subjects made into Flame Wars
of the Righteous Already-Licensed!

>> >Is it your belief that I speak for someone else?
>>
>> Not at all. I find the concept impossible that Heil could ever
>> represent anyone not agreeing fully with his own personal views
>> or experiences.
>
>Then why have you presented yourself as an advocate for change when no
>one asked you to do so?

It was my desire to do so. Why has Heil advocated a status quo
and offciously mean-mouthed those who desire change in one
test regulation?

>Why have you written of others views as if you know what others
>are thinking?

As far as the "Does" are concerned, we HAVE talked about it,
shared viewpoints. Two of the "Does" are licensed radio
amateurs. I happen to have the time and energy to post here
although the time has become non-productive in view of all
the demands to show motivation and desire by some officious
status quo-ists.

>I don't believe that anyone obtains electronics knowledge through simply
>studying the Q&A pool and I don't believe that you ever thought that is
>what I meant by my statement.

I can only read what is written. Heil is welcome to his beliefs.
Heil is not welcome to impose his beliefs on others.

   <amateur Extra test question omitted due to non-understanding>

>Chew on the fact that you can build as many transmitters as you'd like
>right now. You don't even need an amateur license. That amateur
>license permits you to operate a transmitter in the amateur bands.
>"Using" is operating. In that sense, an amateur license does mean "just
>operating".

Yet another "nyah-nyah" statement.

>You get more peculiar by the week, Leonard H. You can know all the
>electronics you'd like. You can even learn the regulatory material.
>Until you pass that amateur exam, you'll likely not be putting those
>transmitters on the air in the ham bands, huh?

Heil keeps up the infantile "nyah-nyah" when the subject was
only about the morse code test. Heil keeps recycling the "have
to have a license before you can talk about it" demand. Pfui.

Heil doesn't have any valid response on the morse code test,
is only capable of puerile personal insults against those who
desire the code test elimination.

In article <3B00AC46.DF73AB07@earthlink.net>, OfficialMotivationOfficer
<k8mn@earthlink.net> writes:

>> Ask the FCC about that. The FCC does not require any staff
>> to have amateur radio licenses in order to regulate, judge, or
>> anything else on radio regulations.
>
>You've trotted this one out numerous times.

It is in good running order. It has to be trotted out until the
turf-claimants understand it.

>You aren't the FCC.

Heil is not the FCC.

>You are not paid to regulate, judge or anything else on radio
>regulation.

There is no "payment" issue on regulations, laws, or anything else...including amateur radio regulations.

>You seem to have a great deal of confusion over that idea.

Absolutely no confusion. What confusion exists is on Heil's side of the screen.

>Your idea has nothing to do with getting anything INTO amateur radio.
>It has something to do with taking something OUT of amateur radio.

That's context-shifting in trying to make message points. :-)

What I was referring to was entrance examinations, the code test that is presently necessary for a below-30-MHz privilege amateur license.

It seems that there is an over-identification with morse code and amateur radio by some. Removal of the code test for a license is no automatic link to the "removal of CW from the bands." It was never so related. Such a false claim has become a staple argument by PCTAs, an emotional fight cause for their personal achievments in code skills. For those few the removal of the code test does seem to be "taking something out of amateur radio" since their whole self-esteem seems pivoted around that tested code skill.

>The code test has been reduced to 5 wpm. It looks as if the code test
>will go away in several years.

The code test is still there as an international standard. There is no guarantee that any administration will try to have S25.5 changed or modified in the future.

>Does that mean you'll go away too?

I don't plan on expiring any time soon. However, I've said several times that "if the code test is removed, I will not argue any more for its removal." Several, in fact all in here have not seen the inherent logical truth of it. :-)

>Does
>it mean that you'll finally grace amateur radio with your presence?

Irrelevant. It would be a hopeless task to compete with the God-like presence of some long-timers in amateur radio. :-)

>Unh-uh, Len. I've told you that I speak only for myself but I am a
>licensed radio amateur--a participant in ham radio.

Yes you have. But that does not explain the divine judgement
"credentials" that demand expressions of motivation and
desire so constantly stated by Heil.

>> Heil belabors the "gotta have a license" need. "Credentials!"   :-)
>
>You want one so badly that you can taste it, Len.

Heil should try a combination of toothpaste and mouthwash
or see a dentist about this bad taste. It may be a sign of
something more serious such as "bile reflux disease" or
the like. :-)

>> Clue: Possession of a ham credential does not authorize impunity
>> in treating others as inferior.
>
>I didn't say you are inferior, Len. I said you aren't a ham. Learn to
>deal with that ham radio envy you've developed.

There's no "envy" involved on this side of the screen.

Heil has said in past messages that he IS "superior" to those
who have not done as he has done. Such delusions of
superiority do not let him "play well with others."

>Check that memory. Your little tale wasn't in the paragraph at all :)
>You claimed superior knowledge then, you still do. You haven't let
>facts stand in your way.

I've not claimed any "superiority." I have claimed certain experience
in radio that covers a long span...longer than 38 years.

I try to back up some of the experiences and opinions with true
facts visible to all in third-party references...even if I am chastised
for hasty typing making an error now and then. :-)   I am not
going to claim a personal opinion as "fact" or some mythology as
"fact" as is done by a few in here.   :-)

>> "Old communications pro?" Possibly. Patronizing? Only to
>> those who don't appear to know what they are talking about or
>> inventing some story concerning HF comm that was standard
>> operating practice before I entered grade school. :-)
>
>That certainly sounds patronizing to those who haven't been involved in
>communications professionally. I have been *and* I'm a radio amateur so

>I won't take it as such.

Heil has been a professional as I've been a professional? I don't think so. I was involved in military communications in the 50s for three years, using standard operating procedures devised by others before my time. Logically, using CW as an "order wire" on an RTTY circuit for the State Department would be a very strange procedure by any group or organization. An "order wire" in a multi-circuit link is a command-and-control communications to keep the links organized. From the 1940s onwards, the "order wire" on HF has used teleprinters. That permits a written record, the same written record, to be retained at both ends of a circuit. Using CW for such an "order wire" is illogical and such a claim is suspiciously like one of the myths such as the "CW intel reports behind enemy lines in the Gulf War."   :-)

>> I'm not telling radio hams how things should be. Those in here
>> can't be told...they already know what is what and what is best
>> for everyone. I'm talking about the FCC's code test to get INTO
>> amateur radio.
>
>Sure you have, Len. You've lectured us on lodge halls and old boys and
>Maxim's trip to Washington.

"Maxim Goes To Washington" is right out of ARRL publications. :-)

"Old boys" in "lodge halls" are forever spouting self-glorification within the fraternity. Nothing new in that.

>You've spoken of how Newington should be
>reformed and you've generally bad mouthed any achievements of radio
>amateurs.

I've expressed my opinion of the ARRL's past Board of Directors policy viewpoints and of their (grudging) acceptance of the most-possible future of the USARS in newer policy statements. I've also said that the ARRL does a great number of services which are definitely good for the membership...and good for some non-members.

I have not, repeat not, "bad mouthed any achievements of radio amateurs" as a group. I've negatively criticized individuals posting in here. Individuals. Unfortunately, those individuals seem to be so self-important that the entire USARS is considered to be of the same opinion as they. By the postings of others, licensed in the USARS, those opinions are not common nor shared.

>I'm sorry, I have to disagree with your explanation.

I have no sympathy for Heil's sorrow.

>> Well, that must be Official. Heil is now in charge of amateur
>> newcomer Motivations. All newcomers are answerable to him.
>
>You aren't an amateur newcomer. When you get that "Extra out of the
>box", you will be. You certainly get defensive when anyone asks you a
>question.

Heil still hasn't posted his "credentials" that make him an
official Motivation Officer of the USARS.

I will get both defensive and offensive when any unofficial
yahoo, big-mouth, redneck, or bully "demands" answers to
satisfy Them.

>> Quick, write your congressperson and demand that all unlicensed
>> personnel at the FCC be summarily dismissed for "lack of views
>> and amateur experience!"
>
>Again you bring up the FCC.

...and I will keep bringing it up until some of the officious,
patronizing long-timers realize it. Few have discovered that
so far and think they can boss it around from long tenure.

>You don't work for the FCC and never have.

Very true. Has Heil worked for the FCC?   :-)

>You don't regulate amateur radio or any other radio service. You can
>play "let's pretend" if you like.

Heil confuses "bossmanship" a great deal. State Dept.
experience in "Bossnia?" :-)

Clue: The FCC will accept input on any radio service, including
the US ARS. It has stated so publicly. The FCC has no public
disclaimer or claimer or clamor that a commenting citizen
"must" have a license in some radio service in order to comment.
That's not "pretense" but rather public fact borne out by the
FCC's own statements.

Yet Heil DEMANDS "credentials" in the USARS in order to talk
about it, especially one small part of a relatively small radio
service that involves morse code testing. Illogical. Incongrous.

>> My error. I forgot that amateur radio works differently than all
>> other radio! Completely slipped my mind about that mythology.
>
>It doesn't matter. You are standing on the outside looking in.

So, amateur radio physics are "different" than every other radio?

Amateur radio physics "work different" if one has "credentials?"

This is truly the stuff of myth and legend...

>>   without any verification of such from any other source.
>
>...and yet you must know that there is some military use of morse and
>some governmental use of morse. Don't you? You mean they didn't tell
>you?

The US Army trains morse intercept operators for intelligence
gathering purposes for all military branches and the US government.
At Fort Huachuca, AZ, along with several other radio skills that
have nothing to do with morse code. Morse code skill is one of

the requirements for an Army Special Forces "communications sergeant" MOS.

Other than that, there is NO NEED for any morse code skill in regular, routine, tactical, or strategic US miliatry communications. The US Army says so, the USN says so, the USAF says so, even the US government says so.

Some morseodists will argue that the singular skill of passive intelligence gathering "shows military use of morse code." That has about as much sense as saying "the US Army cavalry still uses horses" when there are only a few at only one place in or near DC, used solely for military funerals.

>It stands to reason that those who have been at something for a long
>time tend to develop their skills and to accumulate more knowledge.
>It isn't true for all but then you didn't want to ruin your sweeping
>generalization, did you?

Is Heil arguing with himself now?!?

>I always figured that my art teacher knew more
>about painting than I did. If he didn't, he certainly shouldn't have
>been teaching an art class.

My high school art teacher was Richard Martikonis, about 35 at that time, ex-USNR who had commanded an LST during WW2. He was good in water-color wash painting then when I was a teener. I became better than he was, by demonstration, later. At Art Center School of Design (then in LA on 3rd Street) there were some better-at-art instructors, even a few who taught part time. I was their equal, already one who had worked at art (illustration) for money for several years. They did not motivate me as Richard Martikonis did, yet they were "credentialed" teachers. A "credential" is not always a guarantee of proficiency or of success. Some teachers simply can't make it in the world outside of school. I switched to electrical engineering where there were better motivations in the physical world. Never regretted it.

>Naw, Len. You've taken part of a concept and screwed it all up.
>It is possible for you to know something about amateur radio. Even if
>you don't read amateur radio magazines, you've dug up some information
>on the web and have a few friends who are hams. For you to believe that
>this makes you knowledgeable about ham radio is plain silly.

Heil is busy manufacturing another dispute, but his clay is dried out and will not form what he wants. He could not sculpt a Pieta because he has no piety.

Firstly, I am not "more knowledgeable" about ham radio than any other amateur Extra who is also a professional. Anyone with a receiver can tune in on amateur radio communications, hear the jargon, the procedure, the medical ailments. I am more knowledgeable about overall HF communications of the past by virtue of having been a part of both military and commercial communications. I am definitely more knowledgeable about microwave radio than most (possibly greater than 90%) radio amateurs by virtue of having been in that bandspace for a living. [99+% of amateur bandspace is in microwaves]

There is NO need to have a gargantuan knowledge or a lifetime of US amateur radio in advocacy of removal of a code test for an amateur radio license.

> The religious revelation stuff has got me thinking that your
>imagination is far, far better than mine. Either that or you've found
>some magic mushrooms somethere.

No, no shrooms, magic or otherwise. I do not claim to "know more about amateur radio" only that I know as much as anyone else who has an interest in it and can access the information. That information is not secret, restricted, or made available in some divine flash-of-revelation on receiving an amateur license.

The "time-in-grade" (tenure) claim of long-timers that they know what is best for amateur radio is about as pure a Turf claim as can be found. They want things their way for their own personal purposes. That's probably overlaid with some patronizing parental demand of "do what I tell you!" pseudo-authority. They have no such "authority." Perhaps it is just a smoke-screen rationalization for extreme dissatisfaction that newcomers might just know more about radio than they do. Since the morse code test was such a strong "knowledge" claim, they will wave that banner as if it was the epitome of amateur skill. See the "Know code = know ham, No code = no ham" school of non-thought.

As always, Cecil again trims it to fit the requirements of his own personal Agenda.
I said then, have said since, and will now say it again - anyone too worthless to want to spend a little time learning the most basic radiocommunications mode hardly matters whether or not he is ever licensed.

Careful, Jim, you'll have Ed Hare on *your* case next thing out of the
box, asserting you don't know what you're talking about.

I asked questions. If you don't want to tell me, why not tell the
USARS? I haven't demanded that you answer, Len. Just say that the
questions make you feel uncomfortable if you like.

> As I've said some while ago in here, "it might be nice to have an
> amateur radio license...for another hobby."

What's holding you up? You also told us that you were going for an
"Extra out of the box" when the new licensing regs were about to be
introduced.

> The response was rather startling over the next few months. Those

>   nation" (possibly to all of humankind as some implied). Amateur
>   radio is not a quasi-military organization or anything else other
>   than a hobby.

There are certainly service aspects to amateur radio. To some hams, the
public service area is their only interest.

> 2. Likening amateur radio to a guild, craft, or profession that

>   others had done it, which led to...

Aside from a "time in grade" requirement for the Extra years back,
nothing has stopped anyone from starting at any class of license he
feels he can pass. As far as I know, you are the only person to use
words like, "guild", "craft" or "profession". These classes of
license--are you telling us that the only thing that sets them apart is
a code test (the only thing you advocate doing away with)?

> 3. All "should" enter as youngsters (with Novice apprenticeship

>   understood). This is partly a "turf" claim since those who
>   use the claim came into amateur radio that way (and thus
>   all should do so as "the proper way").

What you call tales aren't that at all. Are you one of those guys who dismiss the magazine coverage of very young kids passing an amateur radio exam as manufactured?

What about this idea that those interested in becoming hams "should" enter as youngsters. Even when I held a Novice ticket, I ran into Novices of all ages.   Who propagated the idea that you seem to find very offensive. Is it because it would be impossible for you to start as a youngster?

> 4. Morse code skill is "absolutely necessary" in amateur radio

>   show the "necessity" for maritime radio service for emergency
>   and third-world ship communications in a commerce area that
>   has shifted to SSB voice and various data modes.

But amateur radio is one place where morse use is alive and well. The mode is used extensively. Why shouldn't ham radio be the last place to require code testing?

> 5. Morse code skill testing demonstrates "motivation and
>   resolve" along with "working at mastering code is good."
>   The necessity to demonstrate motivation is not any
>   requirement in regulations but is a fictitious demand by
>   those who have established "turf" in an activity and seek to

>   tactics along with equipment were presented. A ludicrous
>   claim was done by a "retired Army colonel" whose "son

> sent intelligence reports from behind Iraqi lines using CW," without any verification of such from any other source.

...and yet you must know that there is some military use of morse and some governmental use of morse. Don't you? You mean they didn't tell you?

> 7. Long tenure with an amateur radio license "means expertise" in everything concerning amateur radio, therefore long-timers "know what is best for newcomers." A ridiculous bit of turf-claiming which belies the seeming real purpose of preserving conditions that the long-timers prefer (preservation of elitism and privilege).

It stands to reason that those who have been at something for a long time tend to develop their skills and to accumulate more knowledge. It isn't true for all but then you didn't want to ruin your sweeping generalization, did you? I always figured that my art teacher knew more about painting than I did. If he didn't, he certainly shouldn't have been teaching an art class.

> 8. The close relation to (7) is the claim that "anyone not IN amateur radio cannot possibly know anything at all about amateur radio, doesn't know anything, can never know." A gigantic myth written in anger at anyone who proposes a change, any change...but could possibly be an eccentric delusion that claimants think they are "special humans" possessed of powers greater than inferior, lesser beings. Such enoblement is a classic turf statement. If it were true, no newcomer could have passed and entered amateur radio after the claimant's first test and the claimant's sudden transformation given the glory and majesty of revelations after receiving the first license grant. It is as if a religious act "revealed all" getting that call sign.

Naw, Len. You've taken part of a concept and screwed it all up. It is possible for you to know something about amateur radio. Even if you don't read amateur radio magazines, you've dug up some information on the web and have a few friends who are hams. For you to believe that this makes you knowledgeable about ham radio is plain silly. Why, YOU would have to be a "special human" possessed of powers greater than inferior, lesser beings to believe that you, as a non-ham could have as much knowledge about amateur radio as someone who had been an active ham for years. The religious revelation stuff has got me thinking that your imagination is far, far better than mine. Either that or you've found some magic mushrooms somethere.

> 9. "Anyone can learn morse code, tens of thousands have" is a popular response against ending the code test. The problem with that is two-fold: It is used because there are no figures or statistics showing the number of those who tried but could not make it. It does not address WHY a code test still exists. Such statements are usually made

> by those who will never ever have to take another amateur radio test in their lives (part of the turf syndrome).

Let me ask you, Len. Do you believe that tens of thousand of others tried and failed to enter amateur radio through the years? I don't.
I don't think the "why a code test exists" needs be addressed as part of a statement that large numbers of people have successfully learned morse code. Does the issue itself matter in this time when the morse speed for all classes of license have been dropped to 5 wpm and are likely to be dropped altogether in several years? When that takes place, what excuse will you have for not obtaining the piece of amateur radio turf that you so obviously covet?

> 10. No professionals are wanted or desired because it is AMATEUR radio (Roll's capitalization)...and nothing in professional radio has any relation to amateur radio. This is a common non-response which is really a left-hand slap at those who know more radio technology than the amateur. It is illogical and ludicrous and at the same time insults the many who are professionals involved in radio and who also have amateur radio licenses.

Your enormous ego has been bruised. I've never ever felt insulted or slighted though I've worked professionally in communications. Maybe some have just gotten tired of your "Single Wing Anderson-There I was at 10,000 feet with both engines out" tales. You seem to have a gift for pissing people off.

> That pretty much covers most of the ground on postings from those who are dead-set on keeping the morse code test in US amateur radio and have been for the last four years. Some more could be added, of course, but the above represents a synopsis of general posting by the PCTAs.

...as seen by the self-appointed advocate for morse code testing removal.

> Heil will still demand demonstration of motive for campaigning against the code test. This can be summarized by what I said in this message ("it would be an interesting hobby") and by what I am not interested in doing in amateur radio:

You might not believe this but loads of motive shows in what you write and the way you present it.

> I am not interested in working DX on HF, I did HF comm 24/7 for three years a long time ago. I'm not interested in owning the spiffiest or newest or most high-powered amateur equipment despite being able to afford such; have plenty of toys here already. I'm not interested in contest "radio sport" and would rather watch international football or my hard disk defragging than do that.

I hope you'll have as much fun doing so as I will picturing it.
Thankfully, most DX QSOs don't go 24/7.

> I'm not
> interested in taking up obsessions such as a "devotion"
> to amateur radio above and beyond normal life or

> "exclusive fraternity" if it contains too many long-timers
> who love to put down anyone in opposition to their
> devotions or beliefs or turf claims of "knowing what is
> best" for any newcomer.

It certainly beats any prospective newcomer who, in his best Foghorn Leghorn, proclaims that he knows what is best for amateur radio.

> I am interested in amateur radio as one of several ways to
> communicate with others and with the technical side of
> communications, the hardware and software. I am not
> interested in preserving the wetware "ROMs" of the 1930s
> by keeping standards and practices of that time as the

You've gone out of your way to let us know what you are not interested in doing in amateur radio. It is really refreshing that you clued us in as to what you'd like to do.

> Legal amateur radio activities require passing a license
> exam. For under-30-MHz privileges that exam requires

> be eliminated...so do many others including the FCC.

Not exactly true, is it?

> Eliminating that code test does not mean an "end" to
> CW mode use nor does it affect any privileges of those
> already licensed in amateur radio.
>
> It may hurt some long-timers' feelings if "no-codes"
> "invade their turf," but that's just TS card-punching.
> Exclusivity isn't forever and elitist play-space wasn't a
> grant from divine providence.

I don't expect that anyone will have to worry about you invading any turf for some time to come. Even after you've obtained your piece of turf, you may have to change that attitude to find a few folks for a contact. I think you might be able to clear a frequency faster than a nearby lightning strike.

I think this may be what bothers me a bit. In an inductive circuit, voltage leads current; in the capacitive circuit, the current leads voltage. In either case, one doen't have to know a whole lot. The obvious answer is contained within the question. This is difficult? At least have a bridge circuit thrown in if you can't do a fill in the blanks type of quiz. Pretty soon we'll be down to 120 volts hurts, 220 hurts a lot, and don't ever get across 480! At least we haven't gotten down to 'spell your name correctly and we'll add 20 points to you score'.

Wow, talk about out of left field. Hans, I've been arguing for days about a greater need to attract those with technical skills, not some reduction in that. In other words, you're directing your argument at the choir. The only difference between us is the code requirement. I don't see any relationship between code and technical skill. In fact, I see it as a barrier to technical skill - like requiring a person to pass a typing test using an old IBM manual typewriter before allowing him to write an article about the Space Shuttle.

As Billy Sunday once said, I know there is a Devil because the Bible tells
me so and because I have done business with him personally. You could say
the same thing about Edsel J Murphy given the ham radio experience.

The difference is whether you want a scientific satellite built or whether
you want someone to build you a sewage treatment plant that actually works.

Judging from the local engineering emporium, in one more generation all of
the covers when removed will say 'crick' and the unit will play three
choruses of Allah Akbar when the warranty expires.

That's probably true. However, if I got that upset over every battle I lost, I'd have no free time to do anything else. It is certainly worth some time spent to learn from the many lost battles, but anything beyond that is a waste.

You're as bad as I am when it come to that. My wife absolutely
hates when I point to an alternative meaning for something she says.
The English language is filled with these things, some of them rather humorous.

>bash people; that seems like the right thing to do?"

Ed:

Actually, no, I don't. It all started when I read a posting on the old
Fidonet Ham Radio echo in which a no-coder referred to code

testing as a form of "ethnic cleansing" in the ARS. That is what set me off. Since then, I've seen everything bad that can happen in the world blamed on code testing. So, I started to amuse myself by engaging in the fairly simple task of showing the no-coders for the fools they are. After that, it gained a life of it's own. I now wish I had a full archive of everything I've written on this topic. I'm sure it would fill volumes!

>Tell you what; let's put it to the test. Send an email to Dave or Mark and ask them if they feel they have any legal right to censor my personal views on Amateur Radio. If they say anything other than as long as I do not use my position at ARRL to undermine ARRL policy, they cannot, and will not, censor my right of free speech.

Ed:

Well, there it is -- in your own words. What you have just said is that it is impossible for you to make a personal statement in this newsgroup that does not significantly differ from stated ARRL policy. And you wanna know something? If I were Dave or Mark, I'd have made it very clear to you to either tow the "company line" or stay the heck off of this newsgroup! And no, I'm not saying this to get you to go away or anything like that. Remember -- I am an ARRL member in good standing, have been for years before I became a licensed ham, and will be as long as something called "ham radio" still exists. I support the majority of ARRL's policies, programs, and objectives, just not

ALL of them. As a ham, I've received a lot of assistance from the ARRL, and I've also been thoroughly "dissed" directly by ARRL officials. So, my attitude toward the ARRL is, at best, a mixed bag at this time.

>If they say that they do, I will buy you a lobster
>dinner; if not, you owe me another.

Well, so far, we're still Ed 1, Larry, 0 -- lobster dinner, wise. Now, all we need is an opportunity for you to collect.

>> And, as was drilled into my brain over and over during my military career
>> and beyond, "Perception is Reality."
>
>I have seen many a perception here that I think has very little to do with
>reality, Larry.

I mention it because you seem to me like a "perception is reality" kind of guy.

>That cliche is virtually without meaning unless we can agree
>that it applies only to yourself.

Ed, that "cliche" was used by my last squadron commander in my Air Force career to literally make life miserable for me and my Senior NCO colleagues. So much so, in fact, that the minute our career field came open for Early Retirement, all six of us were in his office in the same afternoon presenting our retirement papers. For over a year prior to that, we had been trying to convince him that "perception" is merely perception, and that only Reality is reality. He refused to change his attitude, and continued to misjudge us and our fellow airmen based solely on his "perceptions." In the process, he failed to properly prepare our squadron for a critical inspection, over which I wrote a scathing report to the Wing Commander. It was a lot of fun watching the squadron turned inside out after that, all the while patting the retirement orders in my shirt pocket!

>>The only logical conclusion one can draw from the perceptions gained
>>here is that the ARRL no longer sees a radio amateur as anything
>>beyond someone with a piece of paper in his possession.
>
>The only logical conclusion you can draw is that Ed Hare no longer sees...

Yes, Ed, I'm sure you do see it that way. However, you also are required to reflect ARRL policy without any significant diversion from same, so you are perceived as being an ARRL spokesman. You cannot escape this.

>> All they (the ARRL) expect are larger numbers
>> of people to send in their dues.

>
>I gave my perceptions, Larry; you have seen them in your own unique way. Not
>surprisingly, it is a way that fits your agenda to a T. :-)

My only agenda is to make the rest of the readers understand that when you say something smacking of the ARRL's typical political correctness, that you are doing so as a parrot of ARRL policy. Obviously, the ARRL doesn't want to attach any higher, more stringent meaning to the term "Real Ham" because they know damn well that they would very likely offend the sensibilities of the tens of thousands of technically uninvolved "consumers" of ham radio equipment that don't meet a more rigorous definition of the term. Your statement that a "Real Ham" is someone who passed the tests and possesses the piece of paper does nothing more than ensure that you didn't hurt anyone's pwecious feewings.

>>Ed, I was a member of the ARRL before I became a ham, I will

>really losing touch with "perception." :-)

Yes, Ed, I am VERY out of touch with "perception." I prefer a more analytical approach to dealing with people -- one that permits me to ascertain the true nature of Reality. I think I understand your own "reality" when it comes to the nature of your commentary here on RRAP. And, whether it complies with ARRL policy by design or coincidence, the reality is that I don't recall you ever saying anything that would NOT. Perceive THAT!

>If the goal truly is emergency communications effectiveness, it would be more
>effective to mandate that all hams maintain an operating station and that all
>hams participate "N" hours a month in emergency communications practice
>activity.

Sounds good to me. Does this "mandate" to maintain an operating station give us hams the power to override CC&R's? Would be nice if it did!

>If the goal is for you to have Morse code stations to QSO, then ...

Nope, that's not my goal at all. It would be nice, but it certainly isn't a personal goal. I no longer consider myself to have any personal goals as a ham. I just do what I can, when I can, and try to have fun while doing so.

You are free to interpret my words any way you like, Larry, and it is clear
that you will use that freedom extensively.

> And you wanna know something? If I were Dave or Mark, I'd have made it very
>clear to you to either tow the "company line" or stay the heck off of
>this newsgroup!

Fortunately for me and ARRL, you are not Dave or Mark, because if ARRL started
to impose that kind of censorship of my personal life, I would leave and find
employment elsewhere. Of course, we have to remember that in your mind, or at
least in the view you feel a need to present here, that censorship already
exists.

>And no, I'm not saying this to get you to go away or
>anything like that.

Of course not, Larry. :-)

> I support the majority of ARRL's policies, programs, and objectives, just not
>ALL of them.

Then you and I are alike in that regard. ARRL's policy wrt Morse code testing
is not exactly like the one I asked Tom Frenaye to help implement.

>As a ham, I've received a lot of assistance from the
>ARRL, and I've also been thoroughly "dissed" directly by ARRL
>officials.

Are you sure they were dissing you and not some of the wild ideas that you banter about? After all, accusing someone of not being able to tell the truth (on this forum) could result in a bit of "dissing" in some circles...

>>If they say that they do, I will buy you a lobster
>>dinner; if not, you owe me another.

>Well, so far, we're still Ed 1, Larry, 0 -- lobster dinner, wise. Now, all

Yes, we are, and I am sure they is great meaning to be found in the fact that you are not risking Ed-2, Larry 0. :-)

>>I have seen many a perception here that I think has very little to do with
>>reality, Larry.

>I mention it because you seem to me like a "perception is reality" kind
>of guy.

Good. If you ever have the time, tell me just what that old cliche phrase really means and how you think it applies to the topic at hand. To me, it sounds like an old cliche, or a mantra chant.

>>That cliche is virtually without meaning unless we can agree
>>that it applies only to yourself.

>Ed, that "cliche" was used by my last squadron commander in my
>Air Force career to literally make life miserable for me and my Senior
>NCO colleagues.

So you are trying to make my life miserable here? Time for a good "dissing?"

>Yes, Ed, I'm sure you do see it that way. However, you also are
>required to reflect ARRL policy without any significant diversion from
>same, so you are perceived as being an ARRL spokesman. You
>cannot escape this.

I am not required to post a single word on rra.policy, Larry. Those words I do choose to post are my own.

>My only agenda is to make the rest of the readers understand that when
>you say something smacking of the ARRL's typical political correctness,
>that you are doing so as a parrot of ARRL policy.

No, Larry, that is you action.   Your agenda runs deeper.

> Obviously, the ARRL doesn't want to attach any higher, more stringent meaning to the term
>"Real Ham" because they know damn well that they would very likely
>offend the sensibilities of the tens of thousands of technically
>uninvolved "consumers" of ham radio equipment that don't meet a more
>rigorous definition of the term.

I believe that attaching the term "Real Ham," in the context that it is used here, mostly by you, represent gratuitous insult that demeans those saying it, those impacted by it and Amateur Radio. I don't know what your "style" is in life, Larry, but I believe that it will be much more effective in getting hams into the technical areas you describe to offer encouragment, not demeanment.

When I was a freshly minted Novice, or General, had I run into any significant number of folks who kept telling me that I wasn't a "Real Ham" because they assumed I didn't meet their expectations because the test I took didn't contain hand draw schematics and essay questions, I would not be a ham today. They would have driven me off. And the really pityable part is that they would have convinced themselves that they had done the "right thing" to preserve Amateur Radio.

>Your statement that a "Real Ham" is someone who passed the tests and
> possesses the piece of paper does nothing more than ensure that you
>didn't hurt anyone's pwecious feewings.

Yes, it does, Larry. But it that is the way you view it, I think we can presure that your statements about "Real Hams" do nothing more than ensure that you do hurt their feelings. Perhaps that tells us all we need to know about your "agenda," eh?

>Yes, Ed, I am VERY out of touch with "perception." I prefer a more
>analytical approach to dealing with people -- one that permits me to

>coincidence, the reality is that I don't recall you ever saying anything
>that would NOT. Perceive THAT!

Perhaps you need to work on your recall, Larry. And as to "the true nature of Reality," I guess you are superior after all. Some would even see that you perceive yourself as godlike. I can't touch that; you are welcome to it.

The perception by most, I suspect, is that you appear quite the fool in the process.

Please understand that most others do not find amusement in insulting and demeaning people by class. Many of us did in grammar school, but most of us have grown past that. The amazing part is that you seem proud of it. Odd...

>After that, it gained a life of it's own.

That is unfortunate. Have you considered getting help so you can regain control of yourself and your emotions?

Those engineers bring technical skills to the Service that are over and above
the requirements of Amateur Radio. Most of the advances within Amateur Radio
have come from those with such skills.

What I simply cannot understand is that on one hand, you say that you believe
that Amateur Radio is technically going downhill and on the other, you argue
that Amateur Radio does not need its most technical people.

>What is *your* perception?

That you just like to argue.

Perhaps you will someday say that the FCC knows from long years of direct
experience that ther are always more than enough hams who are capable of
learning Morse code that no testing regulations are needed.

>How can ANY traffic be handled via radiotelegraphy - the most basic

>radiocommunciations mode - without knowledgable hams being trained in
>it?

Hams have always self-trained in Morse code, Dick. Many learned the code before becoming hams. Do you really believe that Morse code is so onerous that people won't learn it because of its inherent value? If so, then you do not believe it has inherent value. I disagree.

Not at all, Dick.  He is saying that some people do that and is providing a
specific example.  Quite a bit different than some of the statements of others
that I have taken issue with.  We had those sorts in the 60s, too.  The
exception does not prove the rule, Dick.

Dang. You're right. What I should have written was something like "figuring out
what size wire to use in order to avoid excessive voltage drop is a real-world
Ohm's Law problem, I'd say."

>A lot easier to do than
>measuring the resistance of a wire with one end in the cab and the other

>under the hood.

Agreed.

> Most of the time such a voltage drop affects nothing
>more than transmit power, and does not result in an FCC violation.

True - but sometimes it does. Ignorance of the effect of voltage drop could result in all sorts of troubles with some rigs. And a cable that is of adequate gauge to carry the current can have unacceptable voltage drop if the length is too great.

Point is, total ignorance of Ohm's Law can lead to FCC violations in a typical VHF/UHF ham station.
>
>I'm not a moron, Jim. I've been around the block a few times when it

Didn't mean to offend you, Jim. Just took up the challenge to show a possible scenario.
>
>Do you understand the point of this observation, or are you just overly
>sensitive about ohms law?

I'm not sure exactly what the various points are. Sorry.

It seems to me that some folks are arguing that testing for a ham license should only cover the absolute bare minimum requirements imaginable. Some regs, maybe some safety, perhaps a little theory. The argument goes something like "Why force hams learn something they may never use?". But by that argument, almost everything in the tests can be eliminated.

Others argue that the license tests should require certain basic knowledge about ham radio, including some theory. Like an understanding of Ohm's Law. I subscribe to this latter view.

In a sudden fit of awareness of his surroundings, Dwight Stewart blurted out:

> The only difference between us is the code requirement. I
> don't see any relationship between code and technical skill.

Stay awake for a minute here, Dwight, while I make a point you must have missed when you were dozing.

I have *never* postulated a relationship between code and technical skill. Never. Nor have I *ever* seen anyone else on rrap make such a connection.

OK, you can turn off your HT and resume your nap.

> >

Well, to get in on this one....

Fine, (as a no-code tech here with csce for general class), give me both the technician question pool, and the general question pool as a test...... all 300+ questions for each..... I'll still get around 80-85% total grade on both.... Give me the extra class one too.... I may just even get a passing grade on that one too..... Hmmm but not a Real Ham here I guess, unless I get the code requirement......

Forget these wimpy 35-50 question tests..... use the whole question pool then. That might actually measure proficiency.   Ohh.... and the code tests should last at least of 1 hour of sending and receiving too...... with 100% accuracy.... I guess that would make real hams!

Sarcastically,

Ryan KC8PMX

Having wasted a good part of my life in the insurance biz, the actuaries
came in for a lot of that:

a. An Actuary is an Accountant that failed the personality test

b. Only an actuary would see something work in practice and take it home to
see if it worked in theory

> >
> >The difference is whether you want a scientific satellite built or whether

But the satellite is a noble project and you can say OOPS. Sewage is
another story entirely.

From John Gardner:

A society which tolerates shoddy philosophy because philosophy is an exalted
profession and scorns good plumbing because plumbing is a humble profession
will soon find that neither its theories nor its pipes will hold water.

If you put tomfoolery into a computer, you will only get tomfoolery out,
but this tomfoolery, having passed through an expensive machine, is
somehow enobled, and none dare now to criticize it.

While most of us are resigned to code disappearing as a testing requirement, the short answer to your observation is 'No you are not'. Remember before your blood pressure rises that we are viewing this issue from both sides of a mountain so we do have different vistas, OK.

First off, you have many Mensa types around here who simply do not view written exams as much of a hurdle. I have been a good test-taker forever and was used in high school to junk the science curriculum (this is Sputnik era) by the department head by getting 90+ percentile scores in courses I never had or even gave a shit about not to mention being too young to take.

For that reason, the code is valued, not so much for its utility which is considerable but for what it says about the testee at virtually any speed. The code does not respect age, money, intelligence, or coolitude; it respects effort but more importantly it requires a suspension of ego, the gathering of one's emotions, and application of a plan consisting mainly of rote drill. That this is not exactly what someone of intelligence does for fun is precisely the point. And the hobby will lose something when one cannot assume the man on the other end went thru the process. How much is debatable, of course. But at least once in his life, the code testee had to act like an adult.

There is some very good software called Morse Academy at http://ah0a.org. Get yourself a get-up and be a cowboy, too.

You are forgiven for the following paragraph.

>
> Forget these wimpy 35-50 question tests..... use the whole question pool then. That might actually measure proficiency. Ohh.... and the code tests should last at least of 1 hour of sending and receiving too...... with 100% accuracy.... I guess that would make real hams!

I've seen some weak justifications for the beep test, but this one takes the cake!

Richard McCollum says:

>it respects effort but more importantly it requires a suspension of ego, the gathering of one's emotions, and application of a plan consisting mainly of rote drill. That this is not exactly what someone of intelligence does for fun is precisely the point. And the hobby will lose something when one cannot assume the man on the other end went thru the process. How much is debatable, of course. But at least once in his life, the code testee had to act like an adult.

Lessee if I got this right.....

....somebody "suspended their ego", "gathered their emotions", and engaged in some "rote drill". This is "acting like an adult", and assuming the guy on the other end (of a QSO?) did this should be valuable to the hobby?

Yeah, OK.

And here I thought ham radio was an interesting avocation shared by people with a common interest in hobby electronics, communications, or public service -- not a character test. Silly me.

 Some of these Engineeeers want to forget that engineers and doctors
have one very critical common characteristic:

 There are some very good ones, and there are some very not-so-good
ones.

 General Douglas MacArthur and General George Armstrong Custer both
graduated from the U. S. Military Academy at West Point. MacArthur
graduated first his class, Custer last in his.

 The difference is not obscure.

As Pat Benz, a fellow who worked for me in Botswana once said, "We now have the capability to send volumes of material at the speed of light and we still have little to say." Pat was the guy who suggested that we set up a little burger joint off Exit 3 of the Info Superhighway.

Is it, Tugboat? Isn't Len the guy who wraps himself in Old Glory and
jabbers about his right to petition his government? How many others
here indicate that their right to free speech has somehow been violated?
Have you seen me do it?

Pretty much the way it happened with me, only more recently, a few years ago here on rrap. The second I showed up in support of a code test I was immediately set upon by a pack of hungry jackels who insisted that I was personally responsible for their misachievments and that my support of code was a travesty of Holocaust proportions. Whatta joke.

As far as I'm concerned anyone who isn't intelligent enoughn to understand the role that Morse code can and DOES play within the ARS just isn't intelligent enough for it to really matter whether or not he gets licensed.

>and we still have little to say."

When I worked at NavElex we were planning the communications suite for the DDG51 program (Arleigh Burke class destroyers). My boss, a savvy mustang Captain, postulated that no matter how much bandwidth we stuffed into radio central, the below-decks guys (supply and admin crowd) would just gobble it up by increasing the length of their reports.

We did, and they did. But we made it easy for the topside warrior guys to pre-empt the whole pipe for "real" traffic.

73, Hans, K0HB

I dunno, Hans. One of the most enduring phrases in real-people
computing has long been

"Garbage in, Garbage out".

When the telegraph line was finished down the old Boston Post Road (US 1)
one of the Boston poets, quite elderly by this time, when informed that
Boston could now talk to Florida replied 'But does Boston have anything to
SAY to Florida'.

Personally, I like the definition of the Xerox machine as that device which
made it possible for more and more people to get more copies of more and
more things they never knew they needed.

And the management prof when confronted by the cheap 'We need more
communication' response pulled himself up to his full 4ft not a lot height,
glared over the podium, and said, "Gentlemen, Caesar Augustus ran the entire
known world without so much as a telex machine. Your problem is to figure
out how he did it.

Dick N�BK

Bingo! I'm amazed that some people would argue to toss out basic things like Ohms law. It seems almost like proposing that the prospective ham only show proficiency in using the ptt button, and how to turn the tuning knob.

I think there already are frequencies set aside for that sort.

Absolutely. Here's another story from EE school:

Best prof I ever had was Dr. Weygandt, who had graduated from the same EE school 55 years before my class. We 21 year olds had trouble keeping up with him, both physically and mentally. The kind of teacher where you sign up for his classes no matter what the subject.

Anyway, in the last term of senior year I was in his power systems class. Homeworks consisted of solving problems in the textbook, and we were on our honor not to copy from each other. He gave us a transmission line problem that looked simple - we were given the per-mile inductance, capacitance and resistance of a line, and asked to find the sending end voltage for a given load and receiving-end voltage.

But when I went to solve it, the answer did not make any sense. Solving it by a different method gave a different nonsense answer. When due date arrived, we handed in our papers and asked how to solve the problem. Turned out most of the class had gotten nonsense answers.

Dr. W. went to the board and wrote a simple equation that relates the line inductance and capacitance to the speed of light. One by one the students got the message: The line described in the book was not realizable - in this universe, anyway. There was a misprint in the book, and only one or two of us had discovered it.

A few students protested, but Dr. W. told them that detecting misprints and bad data would be part of our jobs when we got out of school, and that we were very naive if we thought we'd be protected from such things.

He ended with "Next thing you'll tell me is that you believe everything that comes out of a computer!

I still have the book. That year we students created a new teaching award in the engineering school, named for Dr. Weygandt.

A wonderful memorial and testimonial that ham radio is not a disappearing hobby.

I went from an original-issue 1X3 to another (reissued) 1X3, then to an original-issue 1X2, and when "Vanity Gate 1" opened I paid the fee to get my original 1952 call sign back.

Preserve history.

```

One of the Local QRPers was down in the village the other day, pacing back and forth in the park, with a troubled look on his face and sweat on his brow. After about fifteen minutes of this he started up the hill, working his way closer as he kept pacing. He finally made it to the verandah. We had the feeling he wanted advice, but was afraid to ask. So, against our better judgment, we asked the QRPer what was troubling him. "Oh", he replied slowly, "I'm just thinking about how I can forget CW"

Usually there isn't a lot a QRPer can say that leaves us speechless, but this one did! We had heard a lot of strange theories and creative interpretations of the Eternal Enigmas of DXing from the Local QRPers, but this was something we hadn't expected. We just looked at the QRPer as he ploughed on.

"I can't get it out of my head!" he continued, stopping and looking us right in the eye, "I catch myself looking at road signs, books or anything else that contains text and unconsciously translating it to dits and dahs. When I turn on the rig, I automatically spin the dial to the lower band edge. I can't leave it alone. How am I going to forget it if I can't stay away from it? Pretty soon I won't be a true blue DXer at all!"

We regained our composure and looked at the QRPer intently. "Aren't those the very techniques you used ten years ago to learn the code? And didn't you spend endless hours getting your speed up to where you could operate with the best of them? Why would you want to un-do all that hard work? Aren't you a good CW operator?"

"Yes! Right on all counts. I listened to you! I listened to all the Big Guns and the ARRL. I worked and worked at it until I could send and receive 25-30 WPM. And now I'm cursed with it. I can't get it out of my head!"

"Why would you want to?" we asked, incredulously. In all our years as a DXer, we'd heard the opposite argument thousands of times . . . but we'd never head anything like this before. "Why? Why, you ask! So I can become a true blue modern DXer! The new operators, the ones with the FT-1000's and full bore amplifiers who've been Extras for three or four months are telling me CW QSOs are not real DX! Most of them say unless you hear the other person's voice, it isn't a good contact! They claim I'm stuck in the last millennium, and that a bunch of dots and dashes don't count."

"That's ridiculous!" we roared, jumping to our feet. "Why are you listening to that foolishness? Is there anything in the DXCC rules that have changed regarding CW contacts? CW contacts are just as good as phone! Maybe even a heck of a lot better!"

"Not according to the new guys. They said a real contact has to be made on phone. I said the ARRL and the DXCC desk don't specify anything like that! They laughed at me, and said I should get with the new wave of operators and stop listening to the old has-beens. They said the FCC was moving to do away with CW altogether, and within a few years it'll be just a memory, like spark transmissions."

He looked at us with a worried face and continued, "So if I don't concentrate on SSB, and learn how to become better at busting pileups who are listening 200-220, I won't be able to compete with these new generation of True Blue DXers. I have to learn how to get on DX lists, and all the tricks involved in making sure the Net Controller hears my last two. I can't split my attention between CW and phone and remain competitive. I have to forget the code!" He was sweating and his beady little eyes were glaring right at us. "Being a good CW operator has become a curse!"

"You are over reacting," we said, sitting back down. "CW will never die." The QRPer was not convinced. "I told them that, and they said maybe not, but only computer sent and received code should be allowed. They said that CW is like PSK-31, whatever that is. They said hand sent code could never be as perfect as code sent by a computer, and that a real 21st century DXer will use computer technology to send everything. Why, they even claim that SSB isn't real unless it's DSP processed on send and receive!"

"Don't be so silly" we replied. "CW will always be around, and no computer can decode it better than the human ear. Besides, it isn't a digital mode."

"But they say it is! The new DXers say they can send and receive 50-60 WPM with their TNCs the same as RTTY, Packet and ASCII, and that the dits and dahs are the same as ones and zeros. They say it's a digital mode. These guys all have 1.3 and 1.5 GHz CPUs in their computers too! They keep claiming to be the wave of the future, and say we better listen to them."

"Who cares what they say? The ARRL will protect the interests of us traditional DXers and real CW types. Why do you think they have Straight Key Night? Don't let a few new comers with fast computers tell you the DXCC program is going digital, or that you have to forget CW! They are just pulling your leg. It sounds like they are new members of the Legion of Hand Wringers."

The QRPer drew himself up to his full five foot five and a half inches tall and looked directly in the eye. "That's exactly what I told them. And do you know what they said? They asked me one simple question. 'Who's paying the bills?' At first I didn't follow them. And then it hit me! All the Old Timers are either life members in the ARRL or have dropped out because of the increased fees of the DXCC program. The new kids with their fast computers are the only ones joining the ARRL. They are generating the new revenue. And it follows they will call the shots! So whatever you and I might have learned and believed years ago has all changed. If the due paying members say SSB only, or that CW is a computerized digital mode, we better listen! And you better forget your code too!"

Son of a Gun! We sputtered for an answer, but there was none forthcoming. Usually when a QRPer goes of on a ridiculous tangent, we can see the mistake. This time, we couldn't see a flaw in his reasoning. We scratched our head as he walked down the hill and thought about what he had said. The more we thought about it, the more our brain muscles ached.

Finally we shrugged and started off toward Palos Verdes country. By everyone's measure, this cycle hadn't met expectations. There was DX, but the bands were not as hot as they were during the Golden Days of DXing of past cycles. Wd decided that even if the QRPer and his computers friend were right, we still needed propagation. Maybe the leader of the Palos Verdes Sundancers could explain things. DX IS! Even if it has to be digital. Remember what Lord Baden Powell, the Hero of Mafeking so often advised: "Be prepared!" Even if it means buying a 1.3 GHz Pentium IV to work CW for you . . .

And you better forget your code too!"

Nice try, Vince (or whoever you are), but "the shots get called" by the Directors, who are mostly elected by the life members.

Good luck on this one now.

One could possibly stretch ones imagination that far, yes. Otherwise,
it would be pretty out of the ordinary - a 4 or 5 sigma event.

> It seems to me that some folks are arguing that testing for a ham license
> should only cover the absolute bare minimum requirements imaginable.

Not I. What some folks were saying when I entered this fray was that
the code requirement is unnecessary. I am just trying to point out that
we can argue that other requirements are similarly unnecessary. People
can operate amateur radio their entire career without ever needing to
use code, and people can likewise operate their entire career without
having to ever work a single ohms law problem.
One could easily solve your example problem with a wire table. One does
not need to know how to build a dipole antenna off the top of his head.
If he needs to build one, instructions are given in the Handbook.
Operators are licensed without a requirement that they know all, or even
a large percentage of the rules with which they must abide. So that's
also a poor example.

Some regs,
> maybe some safety, perhaps a little theory. The argument goes something like
> "Why force hams learn something they may never use?". But by that argument,

> almost everything in the tests can be eliminated.

That's my point, Jim. Perhaps I didn't made that clear when I said:
"My only point is to illustrate that one can similarly argue a lack of
necessity for any of the other requirements."

> Others argue that the license tests should require certain basic knowledge
> about ham radio, including some theory. Like an understanding of Ohm's Law. I
> subscribe to this latter view.

I agree. The point is to illustrate the logical error that results when
assuming there is such a thing as a "necessary" requirement. Of those
who have responded, Larry is the only one who got the point.

I got a flash for you dude: One could probably count the number of
Extra class license holders before 1968 on yer fingers & toes and not
run out of toes. Come Incentive Licensing in 1968 God finally put
teeth in the need to pass the 20wpm test. Which was long after God
started passing out 2x3s. Thus the "Extra bands" were flooded with
2x3s & 1x3s.
>
Seems like He had a bit of a cash flow problem back when in the 70s so
He got the bright idea to start selling whizzier callsigns to 2x3
Extras in particular thus He came up with the assorted versions of the
vanity callsign programs. Cash consideations entering the matter seems
to lend some credence to the argument that He is actually a She.
>
Thus it was that many if not most Extra 2x3/1x3s traded in the
callsigns He gave us at birth for the 1x2/2x1/2x2/1x3 aliases we hide
behind today. So the obvious answer to your question is no.
>

\>some of these fellows out of retirement and, sparing the
\>taxpayer the cost , have them test new extra class licensees,
\>at the licensees convenience, for a fee to be used to pay the
\>testers for their time and expenses. The results of said code
\>tests will be posted on the ARRL website and included on
\>QRZ.com or whatever. In addition, those who succeed may add
>'/TE' to their callsigns to signify 'True Extra' or 'TEsted'.
>
Stale. Really stale. You're 'way behind the curve again dude. At least
a half century ago the ARRL had a certificate sort of award available

called the "Code Proficiency Certicificate". Every once in a so often
w1aw would pound out high speed Morse for a few minutes each at
specfic speeds. I forget what the max speed was but it was 'WAY up
there. 50wpm? I dunno.
>
To keep it short the listener could submit his copy to Newington and
recieve a piece of wallpaper which "certificated" him/her as being
able to copy at whatever speed he/she managed solid copy on paper for
one minute straight per the FCC code test practice of those days. As
was the case in gazzilions of other cards my old qsl cards were
imprinted "CP 30" which was the best I could squeeze outta Newington.
>
If memory serves and it certainly might not the CP award was not
limited to licensed Amateurs. I had or maybe still have a card from a
Polish swl imprinted with "CP45".
>
Of course we never took it on the air any more than there was a point
to taking our dxcc totals into a qso.
>

Been there, done all that. One difference between the current
utilization rate of optical transits and cw is that the number of
participants in the annual CQ and ARRL cw dx contests has been
noticeably increasing.

Exactly. And "at the entry level," especially, wasn't a part of your previous position. Didn't even come into play. Having initiated the discussion on "technical acumen" in ham radio versus your "emergency service" argument, I would know. So would anyone who followed that thread.

>This was a change from my previous position.

That's exactly what I said. I also mentioned that since you don't post seriously, by your own admission, we don't know what your actual position is. Next?

Not really. Vbatt-Vradio=voltage drop. A lot easier to do than
measuring the resistance of a wire with one end in the cab and the other
under the hood. Most of the time such a voltage drop affects nothing
more than transmit power, and does not result in an FCC violation.

I'm not a moron, Jim. I've been around the block a few times when it
comes to electronics. You shouldn't presume I don't know the issues
involved.

Do you understand the point of this observation, or are you just overly
sensitive about ohms law?

I didn't have to, Vince. Testing was the subject of the thread which
you deliberately (maliciously) omitted. Old-timers on this newsgroup
are on to you. It doesn't take long for the newcomers to figure
out your malicious intent. I am certainly glad I am not your neighbor.
I would fear for "NO CODE = NO HAM" graffiti all over the front of
my house.

> You can't add "after he has been a ham for a certain length of
> time." You made your statement, and the context was never "entry
> level."

Sorry, Vince, of course I can add that because you are not God and
I just did exactly that. That brings my past statement up to date with
my present attitudes on the matter. You can find all sorts of postings
where I was wrong if you really try. I freely admit that I have been
wrong in the past and could be wrong now.

Of course, you have never in your whole life, ever, ever been wrong

and we accept that attitude that you hold toward yourself. You are
a perfectly omniscient, omnipotent member of the Amateur Radio Service.

One wonders, though, if you are so omnipotent, why did you allow the
FCC to change the Morse code requirements?

> Thus any statement you make is unreliable. Forever.

That's funny, Vince. If my statements are unreliable forever, why
do you spend so much time and energy to try to refute them? Why
don't you just use your omnipotent power to shut me up forever?

Opinion? It's observed fact. Like I'm looking out the window right now
and it's sunny. That's not an "opinion". Overall the evolution of ham
radio has been quite slow but steady.

Has nothing to with any "studies", nobody needs "studies" to recognize
that that overall the slow trudge of ham radio over the decades has
been based for the most part on the cost of implementation of the
technologies and attaining a critical mass of users and nothing more.
>
By the way, what is your "opinion" anyway and what do you see as the
relationship between the rules (incluing the impact of the tests)
which govern ham radio and the rate at which ham radio evolves? How do
you define the terms "evolution" and "revolution" in the context of
ham radio?

I completely agree with you but I have to add a comment here. Back in
the early days of my engineering career one of the credentials I
listed on my resume was having having a ham license. That definitely
put a postive spin on my saleability in the job market to the point
where being a ham directly resulted in my spending two years as a
co-op student with the Sun Oil Applied Physics Laboratory. They wanted
co-ops with multidisciplinary capabilities and this machinist &
mechanical kid certainly was one of those. Didn't hurt when I
eventually wound up at the U.S. Naval Engineering Laboratory where I
got to serve as the intrepreter and arbiter between the EEs who did
the control systems for shipboard catapults and the MEs who did the
hardware. Gawd I got tired of that . .
>
Yeah, the was a day when being a ham could and did have measurable
impact on engineering careers. Today I avoid conversation on the
subject else I get blamed for every RFI problem in the neighborhood.

You are quite correct; I apologize for my poor choice of words.

My intent was to say that the skills required to pass the entrance exams to Amateur Radio have not been on a par with the skills required to attain a degree in engineering.

>but any idea that a ham radio license,
>>of any era, is equivalent to an engineering degree is preposterous.

>Tell that to Lenny. Aw, never mind . . .

Actually, Len believes as I do. Where we disagree is that he believes that most hams think that their license is superior to a BSEE. A tiny handful of hams believe that, at worst.

>Back in the early days of my engineering career one of the credentials I
>listed on my resume was having having a ham license.

IMHO, doing so is still of value, as an addition to the educational and professional experience, not instead of.

I do know that for all of the engineers I have hired over the years, that ham ticket was a "must." :-)

>In this general vein how would you be churning your daily bread if you
>didn't have a ham license Ed?

In between my stint as a General in the 60s and getting relicensed in the 70s, I was an electronics service technician. Although I was relicensed, I worked as a CAD/CAM system installer (Gerber) and as an incoming QC engineer, programming IC and transistor testers. Neither career drew on my ham-radio credentials to speak of.

I assume I would still be doing test-engineering if I had not come to ARRL HQ.

Hey gang.

I'm thinking about a vanity callsign. I can A) request a "cool," short sign; B) take my grandfather's call - sk in '97.

Here's the question: is "B" a good idea, or not? In my case, I'd go from my 2x3 call, to a 'quite old' 1x3 W7 call if I took my grandfather's old callsign.

In a way, I think this would be kind of neat, kind of a memorial to him, the guy who turned me on to radio in the early 70s. In another way, I think this might be a little cornball, and maybe a little confusing (possibly annoying?) to some to hear a thirtysomething's voice/station ID'ed with an 80-year-old's call.

Opinions?

I agree Ed, but would simply note that it is a combination
of factors. Lack of enforcement sure didn't help.

Cheers,
Bill K2UNK

Oh my. Cecil, how will you ever live beyond this day.
Vinny B has condemned you to permanent unreliable status
by his mere say so. Surly life must be hopeless now.

Cheers and ROTFLMAO!

How many think so now? It can be "a lot of trouble and effort" to wipe
3 times too, but it's usually worth it.

Go with what your heart tells you. You are eligible for any call sign you want that is available to you based on your class of license and the FCC rules. I have a good friend who has his late Uncle's call sign, and there are many others who have done the same thing.

Good luck and 73,

In article <3AFDF7E2.4BDCFCFE@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>> Heil needs to work on his perception of personal inadequacy.
>
>Heil needs to call a spade a spade from time to time.

Why? So far it has been a lot of shoveling of time-in-grade...

>> Does anyone passing any US amateur radio written test element
>> have credentials of "really learning electronics?" Really?
>
>It doesn't matter whether anyone passes or not. It matters whether
>someone studies the material.

Not to the FCC or the VEC examiners. Can't get that "credential"
without passing a minimum number of correct question answers.

>That's not your fixation, Len. Why would anyone who isn't a radio
>amateur or who is about to become a radio amateur give a rat's ass about
>morse code testing in the amateur service?

How's about someone who is mildly interested and who is a
US citizen? How about the FCC itself? The FCC put that

regulation into place but not a single one on the staff is
required to have an amateur radio license to do so.

>What you've said in public
>does not provide any motivation whatever.

Heil has NO authority to officiously demand "motivation."

Heil assumes far more authority than he has. However, that
is normal for control-freaks...

> My state's regulations on
>beekeeping can be changed too. I can even petition for that change as a
>citizen. If I don't keep bees or live next door to a beekeeper, why
>would I care?

Heil has a truly bizarre imagination. He should have stayed
with guitar analogues.

>How does expressing my disagreement with your views and questioning your
>motive differ from what you do here? Constantly.

Heil wants a code test for newcomers seeking below-30-MHz
licenses. He has had an amateur license for 38 years. The
FCC has been around since 1934 and has never dropped the
code test for amateur radio licenses. I desire the code test
to be eliminated to fit the future, not the past.

But, Heil constantly wants "proof of motivation" for eliminating
that code test advocacy. Heil has NO authority for that yet
all that he demonstrates is arrogant officiousness when he
has no office, demands things which aren't his to demand.

No newcomer, repeat NONE, is "answerable" insofar as
"motivation" to Heil.

>> Heil should seek a consensus with other Extras in here. Some
>> Extras contend that today's written examinations are nothing
>> but meaningless memorization feats and have no redeeming
>> quality insofar as amateur radio.
>
>Why, pray tell, should I do that?

See the equally-officious (and insulting) comments of W0EX who
contends that no one has learned anything under the open
question and answer pool...it was all memorization according to
him.

>Do you speak for someone other than yourself?

Yes, loosely so. Here are some names, surnames altered
to avoid them being a target for Heil's "motivation" barrage:

John Doe, June Doe, Juan Doe, Harry Doe but not his
daughter Cookie, Phil Doe, Shinjiro Doe, Arpad Doe,
Quan Doe, Bill Doe, Stan Doe, Dean Doe, Jose Doe,
Cheng Doe, Dave Doe (but not his dog the Doe-berman).

[not in order nor are all related...there is no "Dosey"]

>Is it your belief that I speak for someone else?

Not at all. I find the concept impossible that Heil could ever represent anyone not agreeing fully with his own personal views or experiences.

>It is *possible* for someone to rote memorize material without learning
>anything.

That depends on a qualifier. I know a few actors. Actors rote-memorize many lines of script material. If they are playing a character involved in any technical field, they learn only enough extra to make their word pronunciations correct.

>I do not think that anyone who studies the material comes
>away without electronics knowledge.

Qualify "material." If it is the Q&A pool, I will pull out an Extra exam question similar to what was described in here by another months past (Ed Hare?):

E5D11 @E5E06 (B)
In rectangular coordinates, what is the impedance of a network
comprised of a 1.0-millihenry inductor in series with a
200-ohm resistor at 30 kHz?
A. 200 - j188
B. 200 + j188
C. 188 - j200
D. 188 + j200

Now explain how "studying this material" aids learning. Where is complex quantity notation studyable in the Q&A? What is the meaning of the plus or minus signs studyable in the Q&A? What is the signicance of the lower-case "j"? Why are there two different number values there and what do they mean? Is ANY of that studyable in the test Q&A?

I know what it means since I studied it elsewhere some time ago. The correct answer has to be either A or B (number to the left is resistance, given as 200 Ohms) but what of the number to the right of the "j"? Inductive reactance is positive, therefore answer B is correct. Inductive reactance is, to 6 places, 188.496 Ohms for a 1 mHy inductor at 30 KHz.
None of it is rocket science.

If all a prospective amateur Extra did was "study the test
Q&A material" they would be in the dark as to WHY the
numbers in answer B are correct. They would either have
to study the material ELSEWHERE relative to complex
quantity notation, meaning of reactance as applied to
inductors or just memorize the answer as B.

Does a question on a network's impedance have anything
to do with operating CW on HF? Not a blessed thing. But
an amateur license doesn't mean just 'operating' does it?
That license also means a licensee can build and use an
RF emitter in the amateur bands. Clue: Operating CW on
HF doesn't teach squat about radio hardware theory.

I pulled over an AMATEUR Extra test question. I understand the question, can solve it without any answer...yet,
according to Heilian logic I'm not supposed to have any
knowledge of such question answers without that license.
Further, the VEC Q&A Pool Committee devised the
question and answers and the VEC must be composed of
licensed radio amateurs by law. How can there be any
understanding of such amateur questions and the proper
answer without an amateur radio license?!?

I hope that box of fasteners arrives there soon...

In article <3AFE013B.B027BB8D@earthlink.net>, USARS Motivation
Office<k8mn@earthlink.net> writes:

>You've made your comment to the government. What law or regulation
>requires me to take your guff here at face value.

What law or regulation requires anyone to take Heil's guff?
:-)

>What law or
>regulation prohibits me from telling you that you have no credentials as
>an radio amateur?

This is getting to be a "show me your papers!" sort of thing. :-)
Not nice to go there but the temptation is very strong.

"No credentials." That can mean many things. A true thing is that
I have no US amateur radio license. A false thing is saying that
"credentials" mean no knowledge of radio or electronics pertaining
to amateur radio. A false thing is saying that "credentials" means
I have no experience on HF radio...or VHF or UHF or microwave or
MF or LF or VLF radio.

>I don't think I'd ask a guy who reads car magazines
>about repairing a car. I wouldn't try to learn sailing from a book and
>I wouldn't accept Len Anderson as my source on how amateur radio should
>be regulated.

So...Heil is saying that: Auto mechanics cannot read or that
they should not read? GM auto mechanics have rather thick
Helms manuals. Boaters should not learn navigation
("Bowditch") from a book? And, by association, I should not have
any voice in any US federal radio regulations because I am not
licensed in a particular radio service?

It must be so. The First Amendment went away. Goodby...

>How would a non-radio amateur know what is best for the amateur service?

Ask the FCC about that. The FCC does not require any staff
to have amateur radio licenses in order to regulate, judge, or
anything else on radio regulations.

>In what way have you developed an insight into ways that amateur radio
>can be made better?

I was never advocating any ways to "make amateur radio better."
I was advocating only one thing in getting INTO amateur radio.
How does elimination of the code test affect Heil's privileges?

>I've already stated that my views are my own. At least I speak from a
>base of 38 years experience in amateur radio.

Since 1963. How many "credentials" has Heil received that give
him authority to speak for ALL of amateur radio regarding
"acceptible" motivation, desire, interest, etc., etc., etc.?

>A guy who received his
>license last week has a week's more experience in amateur radio than
>Leonard H. Anderson.

Heil belabors the "gotta have a license" need. "Credentials!" :-)

>Len, you aren't an inhabitant of amateur radio at all. I'm trying to
>picture you with you baggy shorts and ballcap on backward rapping about
>being dissed. It is a surreal image.

Heil has a remarkable imagination. :-)

Clue: Possession of a ham credential does not authorize impunity in treating others as inferior.

>I hope you'll re-read your
>paragraph above prior to making each post here.

No need. I have a good memory...including remembering a certain State Department employee who came all unglued when his "CW order wire on a TTY circuit" wasn't received with adulation. That former employee is still angry. Tsk, tsk. :-)

>You adopt the stance of
>the patronizing old communications pro, here to tell the radio hams how
>things should be.

Heil has a beef about non-hams? Try fish.

Clue: Every newcomer to amateur radio is a non-ham.

"Old communications pro?" Possibly. Patronizing? Only to those who don't appear to know what they are talking about or inventing some story concerning HF comm that was standard operating practice before I entered grade school. :-)

I'm not telling radio hams how things should be. Those in here can't be told...they already know what is what and what is best for everyone. I'm talking about the FCC's code test to get INTO amateur radio.

>Well, old timer, you've done jack doodly in amateur radio.

I don't know anyone with the surname of "Doodly." Are you spelling it correctly?

>What have I ordered you to do? I've asked you a couple of questions.
>I've questioned your motivation.

Well, that must be Official. Heil is now in charge of amateur newcomer Motivations. All newcomers are answerable to him.

>I've pointed out that you have no
>experience as a radio amateur thus little to base your views upon.

Quick, write your congressperson and demand that all unlicensed personnel at the FCC be summarily dismissed for "lack of views and amateur experience!"

>> Under Heil's insistent illogic, each and every astronaut
>> should refuse to accept any information and opinions
>> about shuttles or other spacecraft from spacecraft
>> engineers and technicians unless those had also been in
>> space as astronauts.
>
>You didn't design amateur radio. You've never participated in amateur
>radio. You don't regulate amateur radio. You don't manufacture things
>for radio amateurs.

My error. I forgot that amateur radio works differently than all other radio! Completely slipped my mind about that mythology.

>On what bands do you do your DXing, Len? It doesn't have to be DXing,
>Len.

Something must have slipped Heil's mind, too. He imagined something about me "wanting" to operate some HF rig with full power into big directional antennas working some distant island?

>You could be regaling newcomers with your Army RTTY circuit
>glories.

Why would I do that? There was no "glory" in that, merely an experience while serving in the US Army before most in here became of legal age (or even existed). The standards and practices of fixed-point 24/7 HF communications had been established by professionals before my time.

I could continue on experience in microwave radio any time in the 60s through 90s, low-speed data transmission (under 1200 WPM), spread-spectrum communications, radio telemetry, radio telecommand, subjects that have some relation to modern-day amateur allocations, experiments.
I could continue further in modes and methods not allocated to amateurs but that would be passed off as "not applicable to ham radio" by those who have no clue at all of the rest of the radio world.

>> Eliminating the code test for a US amateur radio license should

>> not affect any US radio amateur already licensed.
>
>No, but it certainly has an effect on those of us who are participants
>in amateur radio.

Oh! An "effect!" Emotional disturbance! Good grief, we can't have
some 38-year amateur lifers getting all upset! The nerve of some
people wanting to emotionally upset the long-timers! Oh! Oh!

>The FCC are, by job function, the regulatory professionals in this area.
>The Commission is under no obligation to take your comments any more
>seriously than I take them.

I might send Heil a box of fasteners...to help him screw himself.   :-)

>I know what you do. I asked you why you do it if you have no intention
>of obtaining an amateur license? Your posts do not limit themselves to

>issues of morse testing so there must be something to your fixation.

The mechanism of Heil's responses are called loaded questions. Heil makes assumptions and then impugns "motives" of his own imaginative assumptions. Heil is demanding to show motive. Heil has only an emotional need for others to show motivation to Him, not the USARS.

As I've said some while ago in here, "it might be nice to have an amateur radio license...for another hobby."

The response was rather startling over the next few months. Those ranged over others' personal views of amateur radio as:

1. Amateur radio is a "service." Misusing the word "service" (a type or kind of radio) in Title 47 CFR as some kind of "service to the nation" (possibly to all of humankind as some implied). Amateur radio is not a quasi-military organization or anything else other than a hobby.

2. Likening amateur radio to a guild, craft, or profession that "needs" a progression from low rank on up to "high" (even exhaulted?) "rank" beginning with "apprenticeship" (Novice then, no-code-test Technician now) to culminate with "master" (Extra). That presumably from the way others had done it, which led to...

3. All "should" enter as youngsters (with Novice apprenticeship of course)...apparently in order to enter and be properly imprinted with some mysterious "spirit of ham radio" that is supposed to weld all into a homogenous fraternal order of like minds and spirit. That accompanied by several tales of nine and six-year olds who have "made it" (passed a written tests that very few young schoolchildren could have properly understood). This is partly a "turf" claim since those who use the claim came into amateur radio that way (and thus all should do so as "the proper way").

4. Morse code skill is "absolutely necessary" in amateur radio (in testing or in use) for a variety of reasons that would have been good in the 1930s but are hopelessly outdated at the turn of the millenium. Amateur radio is the last radio service to require code testing for below-30-MHz radio communication purposes. A considerable number of hairs were split trying to show the "necessity" for maritime radio service for emergency and third-world ship communications in a commerce area that has shifted to SSB voice and various data modes.

5. Morse code skill testing demonstrates "motivation and resolve" along with "working at mastering code is good." The necessity to demonstrate motivation is not any requirement in regulations but is a fictitious demand by those who have established "turf" in an activity and seek to

rule/direct it.

6. Morse code is still used by the military. Another myth as far as regular military communications are concerned, even a decade ago. A long set of frayed threads developed in here regarding the "necessity" for Army Special Forces training "showing that the Army still used it" but that was not taken back when examples of present-day comm tactics along with equipment were presented. A ludicrous claim was done by a "retired Army colonel" whose "son sent intelligence reports from behind Iraqi lines using CW," without any verification of such from any other source.

7. Long tenure with an amateur radio license "means expertise" in everything concerning amateur radio, therefore long-timers "know what is best for newcomers." A ridiculous bit of turf-claiming which belies the seeming real purpose of preserving conditions that the long-timers prefer (preservation of elitism and privilege).

8. The close relation to (7) is the claim that "anyone not IN amateur radio cannot possibly know anything at all about amateur radio, doesn't know anything, can never know." A gigantic myth written in anger at anyone who proposes a change, any change...but could possibly be an eccentric delusion that claimants think they are "special humans" possessed of powers greater than inferior, lesser beings. Such enoblement is a classic turf statement. If it were true, no newcomer could have passed and entered amateur radio after the claimant's first test and the claimant's sudden transformation given the glory and majesty of revelations after receiving the first license grant. It is as if a religious act "revealed all" getting that call sign.

9. "Anyone can learn morse code, tens of thousands have" is a popular response against ending the code test. The problem with that is two-fold: It is used because there are no figures or statistics showing the number of those who tried but could not make it. It does not address WHY a code test still exists. Such statements are usually made by those who will never ever have to take another amateur radio test in their lives (part of the turf syndrome).

10. No professionals are wanted or desired because it is AMATEUR radio (Roll's capitalization)...and nothing in professional radio has any relation to amateur radio. This is a common non-response which is really a left-hand slap at those who know more radio technology than the amateur. It is illogical and ludicrous and at the same time insults the many who are professionals involved in radio and who also have amateur radio licenses.

That pretty much covers most of the ground on postings from those who are dead-set on keeping the morse code test in US amateur radio and have been for the last four years. Some more could be added, of course, but the above represents a synopsis of general posting by the PCTAs.

Heil will still demand demonstration of motive for campaigning against the code test. This can be summarized by what I said in this message ("it would be an interesting hobby") and by what I am not interested in doing in amateur radio:

I am not interested in working DX on HF, I did HF comm 24/7 for three years a long time ago. I'm not interested in owning the spiffiest or newest or most high-powered amateur equipment despite being able to afford such; have plenty of toys here already. I'm not interested in contest "radio sport" and would rather watch international football or my hard disk defragging than do that. I'm not interested in taking up obsessions such as a "devotion" to amateur radio above and beyond normal life or religious beliefs. I'm not interested in joining an "exclusive fraternity" if it contains too many long-timers who love to put down anyone in opposition to their devotions or beliefs or turf claims of "knowing what is best" for any newcomer.

I am interested in amateur radio as one of several ways to communicate with others and with the technical side of communications, the hardware and software. I am not interested in preserving the wetware "ROMs" of the 1930s by keeping standards and practices of that time as the epitome of radio or radio credentialism.

Legal amateur radio activities require passing a license exam. For under-30-MHz privileges that exam requires a test for morse code skill. I think that code test should be eliminated...so do many others including the FCC. Eliminating that code test does not mean an "end" to CW mode use nor does it affect any privileges of those already licensed in amateur radio.

It may hurt some long-timers' feelings if "no-codes" "invade their turf," but that's just TS card-punching. Exclusivity isn't forever and elitist play-space wasn't a grant from divine providence.

It's a common computer-modem communications tactic to
discredit opponents any which way they can.  Old stuff.  :-)

If there was disagreement on "superiority" of anything, then I mistyped
in applying it to the handful in here who are PCTAs.

>>Back in the early days of my engineering career one of the credentials I
>>listed on my resume was having having a ham license.
>
>IMHO, doing so is still of value, as an addition to the educational and
>professional experience, not instead of.

I didn't get into aerospace engineering directly until 1960 but way
back an amateur radio license indicated only an "interest" in
radio which was part of the psychological quick-scan of resumes.
Radio-electronics knowledge acquired solely as a radio amateur
was simply not a valid point to show any worthwhile skill in work of
the radio-electronics industry. The indication of amateur radio
activity done outside of the day job, whatever it was, did show that
an applicant continued an interest beyond the normal work time.
That indicator meant that the applicant would be conducive to
acquiring more knowlede/experiences/tasks beyond the end of the
normal work period. That's a worthwhile psychological attribute
from an employer's point of view.

Some of the 1960's amateur radio activity had little relation to
work in the radio-electronics industry. Can any employer really
expect that DX-ing or contesting is an "important skill" to industry?
In the period 1955-1960 there was an intense amateur radio
interest in SSB. Those few radio-electronics firms working on
commercial and/or military SSB were already aware that SSB
had been going on in their area on radio since the early 1930s
and on landline since the early 1920s. The expectation that
radio amateurs would offer some valuable technical knowledge
for their efforts 30 years after the fact is remote.

>I do know that for all of the engineers I have hired over the years, that ham
>ticket was a "must." :-)

For work at the ARRL labs, of course! :-)

>documented in a previous post. He's back in denial.

I admitted to typos. I will not admit to manufactured "errors" which
are not in accordance to what I stated.

Not too long ago I took a slightly different sample group observation
on the number of amateur radio licensees in the POST-restructuring
period; i.e., after April 15, 2000. I specifically avoided a month and
a half immediately thereafter for the VEC applications and FCC
database data to "settile down," explaining why then and going into
detail in a following post. N2EY said that was "wrong" and then
presented data that included end-of-month totals PRIOR to the
restructuring. One cannot lump in prior-restructuring data to a
discussion of POST-restructuring. N2EY claims his method is
"correct."   ???

I supplied a web address that goes into Project Diana history in technical detail, written by one of the participants. N2EY found a flaw in my typing, did not find the correct web address, and tried to make every following statement I made "wrong" because of this error and also for not over-glamorizing the "ham achievements" of Project Diana, the first-ever demonstration proving that the lunar surface could provide radio reflection. Project Diana used highly-modified old radar equipment for the sole purpose to determine whether or not the moon could be a reflector. This was not a "radar application"...there is no need for direction and ranging to a body that has long since been timed and quantified as to direction and ranging.

N2EY found fault in my NOT glorifying all the amateurs who were part of Project Diana and implied/insinuated that amateurs were the "real" basis behind the work done. He specifically took to task the "military-industrial complex" (a phrase not yet in use) which had "taxpayer dollar support" as if military budgets in 1946 were fat and free-spent.

Project Diana was the first radio moonbounce effort under sponsorship and direction of the US Army Signal Corps, Evans Signal Laboratory (earlier name was "Camp Evans").

It would seem that some folks' pride is so hurt that they will not recognize nor appreciate true pioneering efforts in radio unless it can be connected somehow, however tenuous the thread, to amateur radio. That's nonsense. Pioneering is pioneering and the credit goes to the pioneers and their sponsor.

If the pioneer group is not "amateur oriented," well happy TS punching. The radio world is very large with a lot of researchers and experimentors out there, the majority of them professionals. Try to live with it.

Dwight, evidently you and I have differing interpretations of the term. I don't use a homebrew transciever simplhy because it wouldn't be in any way practical to duplicate my transciever by homebrewing one. That doesn't mean I don't have a pretty good grasp of what is inside and how it does what it does. Do I plan to repair it if it quits? Probably not, though that would depend on what failed. The basic reason is that I know from experience that it is far better for most serious failures for it to be repaired in a facility where he repair personnel are very familiar with the equipement and its service and who have shop facilities specifically for the purpose. One shot repairs on any modern radio gear equate to 'shade tree' mechanicing on today's aautomobiles- it jsut ain't very productive, and you can easily screw up more than you fix, if it's your first time there. It's mostly a practical matter.

I consider an appliance operator to be a ham who buys the rig and has no idea how it works, having studied the question pool for his exam. And he doesn't care. Lots of them about these days.

The answer to "why" is that it needed doing.

You asked a question. I provided an answer. Nowhere in my answer did I
stipulate that it matters to the FCC or VEC.

> >That's not your fixation, Len. Why would anyone who isn't a radio

It would seem that anyone with mild interest in something would have
become a participant over time. Let's say over several decades.
That the FCC staff isn't required to be a radio amateur doesn't matter a
whit. No one at the DMV is required to have a driver's license either.

> >What you've said in public
> >does not provide any motivation whatever.

Officiously demand? You're out of your ever-lovin' California mind.
Do you mean to tell me that anytime someone asks you a question, you
take it to be an officious demand?

> Heil assumes far more authority than he has. However, that
> is normal for control-freaks...

Look, Len, I'm involved with amateur radio just about every day. You
are a sidewalk superintendant. I don't really care if you never obtain
a license but if you want it, you'll have to take the steps toward
meeting the requirements for obtaining it. If you'd like to spend the
rest of your life gnawing on bones here, go to it. If it pleases you to
describe me as a control freak, have at it. You can complain to the
ultimate amateur radio control freaks, the FCC.

> > My state's regulations on

Yeah. I note that you didn't comment on my statement though. Bizarre
is prattling on about demanding changes to something you aren't involved
in.

> >How does expressing my disagreement with your views and questioning your

Yep. I know all about "Heil" and the FCC. I also know your views on
morse code testing in the amateur service. I asked you what's it to
you?

> But, Heil constantly wants "proof of motivation" for eliminating

So I take it that you don't like being asked why you are interested in
something which you frequently bad mouth and in which you are not an
participant.

Bully for you!

> The correct answer has to be either A or B (number to
> the left is resistance, given as 200 Ohms) but what of the
> number to the right of the "j"? Inductive reactance is positive,
> therefore answer B is correct. Inductive reactance is, to 6

> places, 188.496 Ohms for a 1 mHy inductor at 30 KHz. None of it is rocket science.
>
> If all a prospective amateur Extra did was "study the test Q&A material" they would be in the dark as to WHY the numbers in answer B are correct. They would either have to study the material ELSEWHERE relative to complex quantity notation, meaning of reactance as applied to inductors or just memorize the answer as B.
>
> Does a question on a network's impedance have anything to do with operating CW on HF? Not a blessed thing. But an amateur license doesn't mean just 'operating' does it? That license also means a licensee can build and use an RF emitter in the amateur bands. Clue: Operating CW on HF doesn't teach squat about radio hardware theory.

Chew on the fact that you can build as many transmitters as you'd like right now. You don't even need an amateur license. That amateur license permits you to operate a transmitter in the amateur bands. "Using" is operating. In that sense, an amateur license does mean "just operating".

> I pulled over an AMATEUR Extra test question. I understand the question, can solve it without any answer...yet, according to Heilian logic I'm not supposed to have any knowledge of such question answers without that license. Further, the VEC Q&A Pool Committee devised the question and answers and the VEC must be composed of licensed radio amateurs by law. How can there be any understanding of such amateur questions and the proper answer without an amateur radio license?!?
>
> I hope that box of fasteners arrives there soon...

You get more peculiar by the week, Leonard H. You can know all the electronics you'd like. You can even learn the regulatory material. Until you pass that amateur exam, you'll likely not be putting those transmitters on the air in the ham bands, huh?

Agree 100% - and they never have been. Nor should they be. The point of license exams is practical radio as practiced by hams, not the general knowledge base of any kind of engineering.

Ham radio gave me the basic tools, though.

I still recall the day good ol' Dr. Ketterer, teaching a class of 25 or 30 3rd year EE students, sketched a common-source JFET amplifier on the board. This amplifier had tuned input and output circuits. He asked if the circuit would oscillate. Everyone in the class said no - except me. I said "it depends on the circuit constants".

He paused a second, then asked "Are you a ham radio operator?" When I answered in the affirmative, he smiled and said "You are the only one who got it right". (I was the only ham in that class). He then asked me to explain what would happen, and I talked about the feedback through the gate-drain capacitance. Dr. K was impressed - and he didn't impress easily.

Much later I found out that the one thing he found lacking in most engineering students was practical experience and an instinctive understanding of the basics. Ham radio gave me both of those things.

>>>it was already being viewed as a problem within ham ranks?
>>
>>Why do you single out HF hams, Bill?
>
>I don't except as to there be no more/less liklihood
>of bad apples because of taking a code test vs not
>taking a code test.

I disagree. I don't think there's enough evidence to prove that claim either way. There are simply too many other changes going on.

>Of that, the FCC has clearly stated
>their opinion.

Agreed. To paraphrase, they see the code test as simply a test of code skills - nothing more or less. But they DON'T offer any solid evidence one way or another about it. You think the FCC is going to say "Gee, we've neglected enforcement for a long time, and that's why you have stuff like the W6NUT repeater?" I wouldn't bet on it.

>Others seem to try to attach some
>behavioral problems to the advent of nocode testing.

Sure. With the same lack of hard data. Too many other things going on to single

out one cause.
>
>>What I'm saying is this:
>>
>>1) "Bad behavior" on the ham bands is much more of a problem today than it
>was
>>10, 20, 30 years ago. There has been a general decline in the on-air
>standards
>>of SOME amateurs.
>
>The bad behavior today is no more/less than 10/20 years ago.

I disagree. It's been slowly getting worse over a long period of time.

>Go back 30+ and you have a more gentil ham population.

I think you mean "genteel", and I agree. Things back then were different.
Universal code testing was only one factor, though - that's my point.

>The behavioral problems have more to do with a change
>in the general population, including hams, rather than anything
>at all related to code testing.

I disagree. I say it's a combination of many factors, not just one or two.
>
>>2) The behavior problems are worst in the 'phone subbands
>
>Because that is where the "voice" can be freely
>used. I wouldn't be surprised to learn that many
>of those bad apples fully hope and expect that others
>are listening that aren't part of the "QSO."

Agreed! But the opposite is also true - many folks forget that they are on the
air and that anyone could be listening.

> I doubt
>many people ever expect anyone to be routinely "just
>listening" to CW contacts which takes away the "broadcast"
>mindset if someone thought they'd key out a string
>of obsenities in CW.

How much CW do you work, Bill? I do a lot, and one of the things I have noticed
about the vast majority of CW ops is that they behave as if anyone might be
listening.

But regardless of the causes - if a certain mode is more conducive to good
on-air behavior, isn't that reason enough to promote the mode?
>
>>3) There are a number of possible explanations for this decline:
>
>Agreed.

Glad to hear it. This is my main point - there are many causes, not just one

or two.
>
>>A - Lack of enforcement

Riley has changed this for the better, but he's got an uphill battle. And it's not just enforcement that counts, but publicizing the results.

>>B - Bad habits picked up in other services and carried over into ham radio

Agree or disagree?

>>C - General change in mores of society as a whole
>
>Agree completely!

I'm not sure if you mean all three or just C.
>
>>D - Changes in technology make such behaviors easier
>
>??? - What about using voice modes has technology
>changed over the year to make such behavior easier?

Lots of things. Used to be that getting on 'phone was a complex and expensive proposition for most hams. Most of us spent a considerable amount of time on CW before getting a license and equipment for voice. All that changed with "Novice Enhancement" and the change to the Tech and Tech Plus as entry-level licenses.

In other words, it's easier than ever to get on voice right away.
>
>>E - Changes in licensing requirements and other regulations
>
>What is the cause/effect?

See above. Simplifying the license process makes it quick and easy to get started. But this also means that some folks will get on the air with almost no real knowledge. For example, I know of a few new hams who got their licenses on a bet. In both cases a ham friend bet them that they couldn't get a license in less than a certains short amount of time. The bet was accepted, the person memorized enough of the question pool to pass and won the bet. Did they really have an interest in ham radio? Maybe. Did they learn much about it in their preparation? Nope.
>
>>4) [The big one] Without a lot more solid data, we can't balme the decline
>on
>>any one reason, or even a combination of them.
>
>I agree...and I'd certainly say it has ZERO to
>do with anyone having passed/not passed any
>code test. That is my ONLY point.

How can you make that claim without solid data, Bill? You're on ground that is as shaky as those who blame it all on the lack of code testing. Nobody really knows, because too many other things have changed as well.

>
>>
>>Sure - but they may not even do that. I don't think they are required to do
>so
>>in a case like this, because they've already made it abundantly clear to any

>no
>>regulatory purpose" from a government agency is the kiss of death for a
>>regulation so described..
>
>We'll know for sure in 2 years or so.

Yup - if S25.5 goes away.

>>>>Not saying I want that to happen, but I won't be surprised if it does.
>>>
>>>I believe some degree of public input/process would still
>>>be warranted.

But the FCC has a ton of leeway on that. Look at the NPRM - four license
classes and written exams with more questions and a predetermined distribution.
Then look at the R&O - three classes and far less written testing. The finished
product looks very little like the proposal, yet the FCC just went ahaead and
did it. Same deal could happen if S25.5 is changed. Poof, no more Element 1.
Or better yet - keep the code test, just make it optional!
>>
>>Me, too, but I remain unconvinced that the FCC would be required to do so,
>>given the amount of time and public input/process already expended by the
>FCC.

The answer is: No one is required to. You've certainly commented on my
postings. No one has shown up to poison your dog. Just don't go on
about your right to comment as if that transcends the rights of others
to make their own comments and to laugh off your ideas.

> >What law or
> >regulation prohibits me from telling you that you have no credentials as

You have no credentials as a radio amateur.

No "Heil" didn't say that. "Heil" sez that a Helms manual isn't a
magazine and that you wouldn't take car repair advice from your neighbor
the insurance man just because he subscribes to "Road and Track".

And I wasn't talking of boaters. I was talking about non-boaters ("Let's see, I have my sailboat and my book on sailing. Time for a little cruise around the bay")

> It must be so. The First Amendment went away. Goodby...

How has your First Amendment right been abridged. Did you make your comment to the government? Have you been prevented from posting your long, pontificating posts here? Do you mean that if you become the object of ridicule, your rights have been taken away? I don't believe you.

> >How would a non-radio amateur know what is best for the amateur service?
>
> Ask the FCC about that. The FCC does not require any staff
> to have amateur radio licenses in order to regulate, judge, or

You've trotted this one out numerous times. You aren't the FCC. You are not paid to regulate, judge or anything else on radio regulation. You seem to have a great deal of confusion over that idea.

> >In what way have you developed an insight into ways that amateur radio
> >can be made better?
>
> I was never advocating any ways to "make amateur radio better."
> I was advocating only one thing in getting INTO amateur radio.
> How does elimination of the code test affect Heil's privileges?

Your idea has nothing to do with getting anything INTO amateur radio. It has something to do with taking something OUT of amateur radio. The code test has been reduced to 5 wpm. It looks as if the code test will go away in several years. Does that mean you'll go away too? Does it mean that you'll finally grace amateur radio with your presence?

> >I've already stated that my views are my own. At least I speak from a

Thank you. My imagination does not extend to a grown white man using
the term, "dissed" in a sentence.

> Clue: Possession of a ham credential does not authorize impunity
> in treating others as inferior.

I didn't say you are inferior, Len. I said you aren't a ham. Learn to
deal with that ham radio envy you've developed.

Gee, I'd think a newcomer is a ham. Every newcomer to amateur radio
was a non-ham.

> "Old communications pro?" Possibly. Patronizing? Only to
> those who don't appear to know what they are talking about or
> inventing some story concerning HF comm that was standard
> operating practice before I entered grade school. :-)

That certainly sounds patronizing to those who haven't been involved in
communications professionally. I have been *and* I'm a radio amateur so
I won't take it as such.

> I'm not telling radio hams how things should be. Those in here
> can't be told...they already know what is what and what is best
> for everyone. I'm talking about the FCC's code test to get INTO
> amateur radio.

Sure you have, Len. You've lectured us on lodge halls and old boys and

Maxim's trip to Washington. You've spoken of how Newington should be reformed and you've generally bad mouthed any achievements of radio amateurs. I'm sorry, I have to disagree with your explanation.

> >Well, old timer, you've done jack doodly in amateur radio.
>
> I don't know anyone with the surname of "Doodly." Are you

Just pencil in the name of anybody you've done, Len.

> >What have I ordered you to do? I've asked you a couple of questions.
> >I've questioned your motivation.
>
> Well, that must be Official. Heil is now in charge of amateur
> newcomer Motivations. All newcomers are answerable to him.

You aren't an amateur newcomer. When you get that "Extra out of the box", you will be. You certainly get defensive when anyone asks you a question.

>
> >I've pointed out that you have no
> >experience as a radio amateur thus little to base your views upon.

Again you bring up the FCC. You don't work for the FCC and never have. You don't regulate amateur radio or any other radio service. You can play "let's pretend" if you like.

> >> Under Heil's insistent illogic, each and every astronaut

It doesn't matter. You are standing on the outside looking in.

> >On what bands do you do your DXing, Len? It doesn't have to be DXing,
> >Len.
>
> Something must have slipped Heil's mind, too. He imagined
> something about me "wanting" to operate some HF rig with

> full power into big directional antennas working some distant
> island?

You said you weren't going to do any DXing on the amateur bands. I just assumed that you plan to do your DXing elsewhere. You can play Walter Mitty with any ham radio scenario you like. You can handle imaginary traffic, engage in imaginary rag chews, chase imaginary DX or work imaginary meteor scatter. Please yourself!

It must have been glorious, Len. You've brought it up enough times over several years that most of us have memorized it.

> I could continue on experience in microwave radio any time

> of the radio world.

You could. If you did it in an avuncular style, didn't get too windy and didn't talk down to your audience, the stuff would likely get a warm reception. Your parting shot at "those who have no clue at all" makes that all seem highly unlikely.

You really are a squirrel. It amazes me to note that you immediately equate "effect" with "emotional disturbance". Does that mean that the moon has an emotional effect on the tides?

Oh, that sentence sunk in, huh? :)

Dave K8MN

Ah. Finally we swerve away from the 'high tech' theme. 'bout time.

FCC knows from long years of direct experiencethat there are always more
than enough hams who are active,informed and capable of handling
emergency communications such that no such regulations are needed.

>

```
> If the goal is for you to have Morse code stations to QSO, then ...

 How can ANY traffic be handled via radiotelegraphy - the most basic
radiocommunciations mode - without knowledgable hams being trained in
it?

I guess that I am worthless. These pro-code attitudes are the reason that I am no longer active in amateur radio. If this type of attitude prevails, amateur radio will die! We might as well give the spectrum back to FCC for reassignment to commercial radio services. After all of these Old Timers kick off, the damage will already have been done!!

Just to demonstrate that there are two equal sides in every equation, after nearly 30 years of nearly daily activity, I became so demoralised by the gutting of ham radio licensing requirements that I have been virtually QRT (non-transmitting) since the latest restructuring debacle.

After "Novice inhancement" 10m was transformed into the 11m auxilliary band. Now that we have 5 wpm overnight sensations, all the bands have been invaded by the unknowing.

Cecil:

If you owed the IRS a million bucks in taxes during the last few
years of your working life, why should you be exempt from paying
them? I, myself, would consider myself lucky to have such an
income. I would also have retained the services of an accountant
to make damn sure I wasn't paying one penny more than my fair
share. Then, I would have had my account's version of my return
reviewed by a tax attorney. I'm willing to bet your million bucks
in taxes could have easily been five times less than the accountant
and the attorney would have charged in fees!

Ed:

I don't recall every saying that amateur radio doesn't need its most technical people. As a matter of fact, I value hams with professional electronic training and experience quite highly. However, I don't feel that it is worth downgrading our licensing requirements to bring in the relatively tiny number of them that may have a passing interest. All of the most technically qualified hams I knew were hams in the truest sense of the word. They loved ham radio, and that included the Morse code. Virtually to a man, they have been code proficient, CW using, Amateur Extra-class licensees. Those who wern't were the LMR technicians, or "Motorola Moguls" as I call them, who were mainly Techs (both Nickle-variety and no-code) who could care less about the code, didn't care if there was a test requirement or not, and who mainly concerned themselves with keeping everyone else able to kerchunk the local VHF/UHF repeaters. If you think I don't appreciate hams with professional-level technical expertise, once again, you are barking up the wrong tower!

>>What is *your* perception?

>That you just like to argue.

Kim:

Actually, he couldn't He couldn't tell you much of anything about ANY of the most important people he had working for him -- his Senior Non-Commissioned Officers. When he took over the squadron, he didn't even bother to have a personal, one-on-one meeting with us, like his predecessor did. He judged all six of us based solely on his first impressions -- and usually managed to find those impressions to be unfavorable. My colleagues and I were in charge of the functional areas of our squadron which got the mission accomplished, and he, our leader, thought very little of us based on virtually no direct knowledge or experience

of what we were like as managers or as people. Even the
civilians in the squadron complained of our commander's "shoot
from the hip" management style.   Why else would six of his
Master Sergeants, virtually in unison, request early retirement
or transfer while under his command?

>
>I cede the point; most emergency communications is not carried out using
>Morse
>code. Can you provide an estimate for how much emergency communications is
>carried out using Morse code?

Ed:

Hmmm. Lessee...

All estimates will refer to the period of time since I have been a licensed
radio amateur (July, 1981 - Present).

-- Actual, immediate notification of impending emergency situations provided
by the potential victims: Zero.

-- Actual, immediate notification of impending emergency situations provided by second parties to assisting agencies: < 1%

-- Health, welfare, and other administrative support message traffic between relief officials in the affected area and their source of assistance, ~ 25%

There you go. Now, please explain what my estimates have to do with the POTENTIAL for use of Morse/CW in an emergency situation, and the fact that if nobody knows how to proficiently employ this mode, the option doesn't exist? Please include all of the attributes of the Morse/CW mode which you feel are irrelevant to emergency operation, assuming that there are trained operators able to effectively employ this mode.

>>I no longer consider myself to have any
>>personal goals as a ham.
>
>For someone without a goal, you are directing a lot of energy not to achieve
>it...

The level of energy I direct toward amateur radio, or any of my hobbies, is purely my choice. However, thank you for your concern.

>The perception by most, I suspect, is that you appear quite the fool in the
>process.

To be thought of as a fool by fools is something that is of no concern to me. Do you consider yourself a fool because you have firmly held convictions, and are able to express them enthusiastically and articulately?

>Please understand that most others do not find amusement in insulting and
>demeaning people by class.

Yes, usually the people of the "underclass." However, in real life, I've had to suffer at the hands of those with a higher standing than I in one area or another -- usually as the result of wonton abuse of authority which was confused with personal power. I have always treated my "subordinates" with fairness, objectivity, and kindness, while rarely receiving any of the same considerations from my so-called "superiors." During my military career, I've always been sought after as a boss, while being ripped to shreds by my own bosses. I was not a part of the inner circle of power hungry, corrupt, career-massaging. I was always the dumb sucker who was mainly interested in getting the mission accomplished. As such, I usually performed relative miracles, and managed to show my inept "supervisors" for exactly what they were to *their* superiors.

>Many of us did in grammar school, but most of us
>have grown past that. The amazing part is that you seem proud of it. Odd...

Well, unfortunately, my experience with being the "under class" has been lifelong. And the only reason is because I've always had the determination to do things the right way, in spite of the obstacles placed before me by the incompetent or corrupt people I had to work for. Therefore, if members of the amateur radio "underclass" resent me for firmly believing in and supporting the concept of multi-level code testing, I, as I've said before, can't help them.

>>After that, it gained a life of it's own.
>
>That is unfortunate. Have you considered getting help so you can regain
>control of yourself and your emotions?

I have amazing control of my emotions, and have been rated very high in emotional intelligence by a Psychologist I worked for a few years ago. I assure you I have no need of such "help." I don't hold in my emotions; I don't contain my anger; I don't internalize my stress. I seek an outlet, and let it go. Why do you think I've written the equivalent of several volumes of the Encyclopedia Britannica in this forum over the years?

>(non-transmitting) since the latest restructuring debacle.

I think you are both losing out.  The odd part is that you are choosing to do
it to yourselves.  Neither the bad attitudes of some nor changes in the code
tests affect your operating priveleges in the tiniest amount. I wonder why you
are choosing to de facto take them away from yourselves?

Let's put it to the test. What percentage of the 600,000 engineers in the US
are licensed hams?  If most, I will cede that there is a rap to be beaten.

I don't know; perhaps you could divide each figure by "a few" years and get an
annual salary.

Do you think it possible that "few" means a different number in each post?

I remember seeing an ad in Sci Amer magazine or similar for Mensa. If you scored over 1300 combined on your SAT's, you could join. Well, I scored 1310. Now, do I want to be the stupidest member of a club that prides itself in being highly intelligent? :-)

I didn't say there was any misspelled words in that posting, Dick.
Here's some of your other postings.

"You need teo realize, Mike, ..."

"AQnd you, sir are a freakinng idiot."

"Yeah, that woud be ..."

Please don't try to con us into believing you used a spell checker.

Yep, we know, Dick, and that includes about 20% of licensed hams.
Many of them are your technical superiors.

For you, Dick, that's true. For a lot of hams, ham radio *IS* about
near maximum theoretical throughput. PACTOR II comes to mind.

"Heil" hasn't lost any sleep over it. It would seem that you spend more time worrying about not having a ham ticket than I do worrying about contacting the man in the moon.

You spout the "therefore" as if you have some knowledge of what I think. Tell you what, I'll participate in amateur radio; you can do the imagining.

It probably wouldn't be any longer than the list of things you don't
know about amateur radio. Why not write up some articles and submit
them for publication in one of the amateur radio mags?

> >> >> Eliminating the code test for a US amateur radio license should

It might surprise you to know that number 2 is one I subscibe to.
You'll find me working newcomers on any band I find 'em. You might find
out when and if you ever become a newcomer. I haven't found number 3.
in evidence on the bands. I've noted some poor operating practice from
some newcomers. I expect they'll pick things up after time. In the
interim, some create QRM. Some slow things down in a pile up. You
might be expected to know these things if you were a ham. It's kind of
hard to get a feel for it if you get most of your information from the
internet.

If that's what is keeping you from participating in ham radio, you have made the case against yourself far better than anyone else could have. Wild horses couldn't have kept me off the air, and for sure no other individial's opinion could have. As always, your type is its own worst enemy.

That doesn't make sense. "Heil" has a license. Your comment was that
the FCC staff isn't required to be licensed in order to regulate amateur
radio. They are paid to regulate amateur radio.

> >You are not paid to regulate, judge or anything else on radio
> >regulation.
>
> There is no "payment" issue on regulations, laws, or anything

Tell that to those folks at the FCC. The poor saps think they're
getting a pay check for regulating amateur radio.

You live in Fantasy land. Your self esteem seems awfully tied up in an
activity you aren't even involved in. How wierd is that?

It doesn't matter. You'll continue to be a windy pain in the ass until
that day. After the change, you'll find time to prep your litany of
other beefs with the service you aren't involved in.

> >Does
> >it mean that you'll finally grace amateur radio with your presence?

It's a little late in life for you to start competing with anybody in
anything. Just try not to be a straggler.

> >Unh-uh, Len. I've told you that I speak only for myself but I am a

Just say the questions make you feel uncomfortable, Len. I question the motives of lots of people--car salesmen, lawyers, politicians and people who are self-proclaimed advocates in a field they aren't involved in.

> >> Heil belabors the "gotta have a license" need. "Credentials!"   :-)

I certainly wish I could believe you. Your lengthy posts have betrayed you.

> Heil has said in past messages that he IS "superior" to those
> who have not done as he has done. Such delusions of
> superiority do not let him "play well with others."

We're not all equal, Len. We are guaranteed equal opportunity, not equal results. That isn't delusion, that's fact. In this brave new world of ours, we're supposed to be careful not to injure the self esteem of others. I'm superior to some, inferior to others.

> >Check that memory. Your little tale wasn't in the paragraph at all :)

> >facts stand in your way.
>
> I've not claimed any "superiority." I have claimed certain experience
> in radio that covers a long span...longer than 38 years.

Len, your engineering claims are rrap legend. I'm happy for you over your experience outside of amateur radio. Maybe some day you'll be able to talk of your experience inside amateur radio.

> I try to back up some of the experiences and opinions with true
> facts visible to all in third-party references...even if I am chastised

Are you trying to have a game of "mine is bigger than yours", Foghorn?
I've worked in communications in the military (four years), radio
broadcasting, industrial electronics sales and have had a full career in
State Department commo to include running comm centers, managing
classified and unclassified LANs, maintaining Mitel and Nortel telephone
systems along with embassy VHF/UHF mobiles, portables and base stations.
As fascinating as you'll find that, it doesn't really mean a hoot to the
world of amateur radio.

> Logically,
> using CW as an "order wire" on an RTTY circuit for the

> as the "CW intel reports behind enemy lines in the Gulf
> War."   :-)

Maybe your a little more dim than I first thought. I did not institute
the use of CW as an order wire. It was in place and in use before my
time. It's use was necessary for a couple of reasons. The fact that
you don't accept it doesn't change the reality and doesn't really bother
me. Show me your clearance and demonstrate a need to know and perhaps
we can discuss it. It really seems to bother you.

> >> I'm not telling radio hams how things should be. Those in here

I know well the story. I also know the story of how some geezer from
California pooh-poohed the story.

> "Old boys" in "lodge halls" are forever spouting self-glorification
> within the fraternity. Nothing new in that.

...except that there isn't any lodge hall which won't accept you for
membership. It is, however, up to you to take the first step. You'll
have to obtain a ticket.

I find you offensive almost all of the time. You get defensive when
anyone asks you a question about your stake in all this. The questioner
becomes an "unofficial yahoo, big-mouth, redneck, or bully" and his

question becomes a "demand". It'd be tough for me to describe you as a
big mouth since I've never heard your voice. I do find you an
unpleasant man with a grating manner.

>
> >You don't work for the FCC and never have.
>
> Very true. Has Heil worked for the FCC? :-)

Smiley face discounted. Heil has a license. Heil is not an outsider
trying to bring change to the face of amateur radio. Anderson is such a
person. He is not an FCC staffer paid to regulate amateur radio.
>
> >You don't regulate amateur radio or any other radio service. You can

> disclaimer or claimer or clamor that a commenting citizen
> "must" have a license in some radio service in order to comment.
> That's not "pretense" but rather public fact borne out by the
> FCC's own statements.

You seem to confuse "accepting comment" with agreeing with your ideas,
paying attention to your ideas or accepting your comments as valid.

> Yet Heil DEMANDS "credentials" in the USARS in order to talk
> about it, especially one small part of a relatively small radio
> service that involves morse code testing. Illogical. Incongrous.

The incongruity would be that anyone not an amateur radio operator would
spend a large part of his waking hours lobbying for change in a radio
service in which he is not a participant.

> >> My error. I forgot that amateur radio works differently than all
> >> other radio! Completely slipped my mind about that mythology.
> >
> >It doesn't matter. You are standing on the outside looking in.
>
> So, amateur radio physics are "different" than every other radio?

Hell no, Len. The physics are the same. That license is certainly
different. Your others and your experience are not transferable.
You'll have to meet the requirements for licensing just like everyone
else. I'm not talking about past requirements. I'm talking the
requiremnts of today. Maybe you can outwait the morse testing
requirement. If you do, your experience in amateur radio will be a
short story.

> Amateur radio physics "work different" if one has "credentials?"
>
> This is truly the stuff of myth and legend...

You'll likely never know. If, after having reached your seventh decade,
including at least several decades exposure to amateur radio, you
haven't bothered to attempt licensing by 2001, the odds are that you
never will.

Dave K8MN

Fill them with what? Like your Mentor, Lennie the Limp, you have long since left behind any rational discussion that anything you have to offer on the subject is almost immediately suspect.

What a shame.

And like Lennie you claim great education and "maturity" in your "field", yet you can only advance yourself on the slandering of others.

What a shame.

I generally support code testing. I believe that it offers a "least common denominator" in international communications and that it does offer simplicity and reliability. It has proven since the beginning of radio communications that it will get through.

Therein it ends. The die is cast and the "majority" have spoken. Code testing is going to go away. I can't say it's a necessarily a good thing, but then too, neither is it bad.

Amateur Radio HAS advanced with the times (contrary to Lennie the Liar's assertions) and it WILL continue, contrary to yours.

>So, I started to amuse myself

Probably because getting banned was a joke, as was all of Fidonet. You could
easily call another BBS and drive the moderators insane. Akron HUBCHAT has some
stories behind it.

The moderator of the HAM echo, incidently, declared the code debate OT *after*
he had put his two cents in. Hmmmm....

There aren't any others, Len. Let's see--there's you.....and ummm...I
guess its just you. As to taking me to task, you don't have any
ammunition to do so. You're some guy standing by the window looking in.

> >You have no credentials as a radio amateur.

I have never made that claim. You've manufactured it.

> According to FCC regulations, the US radio amateur is allocated
> 9 frequency bands on HF plus 16 more above 30 MHz. Those

> the 70 cm amateur band? Or has Heil merely read of such
> things in an amateur magazine? If the latter, how can Heil
> claim such "superiority" in things about amateur radio if all he
> did was "read about it?"

"Heil" has done it, Len. Heil is currently active on 2m and 70cm SSB/CW terrestrial work and separately for satellite work. 1.2 and 2.4 GHz will be added shortly for sat use. I didn't garner all my information from books. I sought the advice of those who have been successful on those bands. In addition, "Heil' is active on 50 MHz and the nine HF/MW bands with equipment and an antenna farm that most hams dream of.

> It would seem that Heil's entire amateur experience, at least
> from what he writes, as being entirely on HF whose total
> bandspace is less than 1% of all allocated amateur bandspace.

You know as little of me as you do amatuer radio.

> Strange mathematics. Less than one percent is "everything"
> while more than 99 percent is "nothing." Must be the "new
> math" by some long-timers. :-)

I've never made such a claim. It is yet another product of Anderson Manufacturing.

> >How has your First Amendment right been abridged.
>

You don't care to respond to this one either.

> Not a problem to me to recognize such, nor by others.

Ridicule is common on television, on radio, in newspapers, in politics,
in court rooms. I'll note that you didn't care to answer this one
either.

> These pejorative (over or implied) non-replies are given by

The several paragraphs above are what I meant by long and windy. You
can go tell the wife, "I really gave it to those guys today" over lunch.

This is another of your looney ramblings, Len. I've never said what you
should or should not do in amateur radio. Hell, you'd have to get there
first. We're a long, long way from that point.

> >> Legal amateur radio activities require passing a license

Naw, Len. I'm just licensed to be on this particular turf. I think it
honks you more than you care to admit that you can't play.

I don't think you'd find it particularly difficult to obtain a license.
You're obviously capable of passing any written exam. You could no
doubt learn morse at 5 wpm in less than a month. Your only trouble
would be in restraining "Foghorn" so that you could engage someone in a
QSO. That's hardly a threat, Len. Think of it as an observation.

>"supervisors" for exactly what they were to *their* superiors.

You should read what you write, Larry. You DO need counselling. With Lennie, I am mostly jabbing him (although he is borderline manic depressive).....You are textbook.

>Well, unfortunately, my experience with being the "under class" has
>been lifelong.

They have corrective surgery for that these days, Larry.

>And the only reason is because I've always had the
>determination to do things the right way, in spite of the obstacles >placed
before me by the incompetent or corrupt people
>I had to work for.

So now YOU are going to be the "incompetent or corrupt" person someone ELSE is going got have to work with.

Real positive role model, Larry.

>Therefore, if members of the amateur radio "underclass" resent me
>for firmly believing in and supporting the concept of multi-level
>code testing, I, as I've said before, can't help them.

I doubt there is anything you COULD offer them, Larry, even if you wanted to. Nor would anything that you DID offer them be of any consequence or value.

>I have amazing control of my emotions, and have been rated very
>high in emotional intelligence by a Psychologist I worked for a few
>years ago.

And of course we ALL have the HIGHEST regard for professionals in the mental health profession.

> I assure you I have no need of such "help."

Denial...that's a good one, Larry...keep repeating it to yourself over and ovr and over and ....

> I don't hold
>in my emotions; I don't contain my anger; I don't internalize my
>stress.

Nope. You dump it here with the rest of your trash.

> seek an outlet, and let it go.

So we have found out.

>Why do you think I've written
>the equivalent of several volumes of the Encyclopedia Britannica
>in this forum over the years?

You have written much...and said little.

> :-)

Give me that part about adhering to debate rules again. You have consistently done what you accuse others of doing. It's sort of a Leonard H. Anderson trademark. It's one of those things which endears you to others.

>These pro-code attitudes are the reason that I
>am no longer active in amateur radio.

If you are no longer active because of someone ELSE'S attitudes or opinions, I doubt that you were that deeply commited to it in the first place.

There are just too many things to do and too many places to do it in Amateur Radio to let someone else's prejudices hinder you.

>If this type of attitude prevails, amateur radio will die!

Heard this same thing in the late 60's and early 70's...didn't wash then, either.

>We might as well give the spectrum back to FCC for
>reassignment to commercial radio services.

In as much as you obviously still have some interest in Amateur Radio, evidenced by your presence here, I wouldn't give sentiment like that too much air time. We already have enough to overcome without help from within.

>After all of these Old Timers
>kick off, the damage will already have been done!!

Including the damage by apathetic Hams who run and hide when they get thier feelings hurt?

By the way, Jim....what have YOU done for Amateur Radio lately...?!?!

73

So you agree that the military still finds some use for morse. I note
that you've left out other government users.

Good for you. Your summation of amateur radio content still shows that
chip on your shoulder.

> There is NO need to have a gargantuan knowledge or a life-
> time of US amateur radio in advocacy of removal of a code
> test for an amateur radio license.

If you are one who seems to believe that amateur radio is no different
than any other radio service your comment could make sense to you.
Those in amateur radio could take issue with you.

> > The religious revelation stuff has got me thinking that your

Yep, you likely no as much as any other individual who is interested in
becoming a radio amateur--more than most by virtue of your experiences.
If you think you know it all by taking an occasional spin on some band
and by gathering your information from the internet, you'd be hard
pressed to justify a claim that you know more about amateur radio than
an active participant. You're right about the revelation upon receiving
an amateur license. That's where the experience comes into play. You
don't have that. Maybe you could give me a few pointers on contest
strategy, breaking a pileup (how about a CW pileup?) or on amateur
procedure in a formal voice net.

Sure sounds like sour grapes to me, Len.

You don't read my stuff and you don't even read your own stuff. You're
have trouble following along because you snipped out my initial comment.
I'm not talking about passing the test. I'm talking about studying the
material. Try to keep up.

> >It would seem that anyone with mild interest in something would have

> cranking and spark advance.

You know, that State Trooper who administered my motorcycle riding
skills test didn't have a motorcycle. He may not have even had a
motorcycle endorsement. Hand cranks and spark advance aren't in use.
Morse code is in wide use in the Amateur Service.

> >> Heil has NO authority to officiously demand "motivation."

You can stand on the walk all you like. That's where ALL of the
bystanders and onlookers will be.

> >I don't really care if you never obtain

Take it as gospel.

> >If you'd like to spend the
> >rest of your life gnawing on bones here, go to it.
>
> I thought I was... :-)

Doesn't go far toward getting you on the air as a ham. Maybe THIS is
your hobby.

> >If it pleases you to
> >describe me as a control freak, have at it.
>
> It doesn't "please me" to call a control freak a control freak, yet
> one has to.

Do I control you, Len? Do I limit your ability to post? What would you
call a guy who isn't involved in an activity but who single-mindedly
sets out to change the regulations governing that activity? Do the
words, "control freak" stand out?

> >You can complain to the

> >ultimate amateur radio control freaks, the FCC.
>
> The FCC is the US civil radio regulation agency. They aren't
> "control freaks" and, by complaints of many in here, don't
> seem to do a lot of "control" of amateur radio. On the other
> hand, the FCC Enforcement Bureau has an enormous listing
> of actions taken on infractions in other radio services.

How can you say that, Len? They issue licenses. They set the standards
under which testing takes place. Write them several letters a week if
you like. Be sure to point out the "lodge hall" and "old boys" stuff to
them. You might want to throw in some of that lengthy material about
your professional experiences.

> >> Heil has a truly bizarre imagination. He should have stayed

> Really? How is it "bizarre" to talk about removing a regulation
> which will NOT change anything for those already-licensed, will
> NOT remove any privileges, will NOT change their titles, status,
> or privileges?

Try to keep up now. It is bizarre because: you are prattling on about
demanding changes to something you aren't involved in.

> Bizarre is the already-licensed officiously demanding "pass the
> tests first before you can even talk about something!" Bullshit.
> Bizarre is the self-appointed Motivation Officer demanding some
> kind of demonstrated desire and motivation when he has no
> such rank, title, or "credential" for the office.

Maybe you could settle for the no code exam since you've pointed out
your vast experience in the microwave region. You could worry about HF
access after that dratted code thing goes away in a few years.

> >Yep. I know all about "Heil" and the FCC. I also know your views on

> >you?
>
> No one knows Heil's motivations on keeping the amateur race
> pure to his liking. Why is that? What is it to Heil if someone
> is interested in, but not interested enough, to pass some kind
> of "motivational resolve proof" test?

What is this gray area of "interested but not interested enough"?
You have the no code option open to you now. It's been available for
ages. There is no amateur race and I don't keep it pure. Anyone who
passes an exam becomes a ham. You haven't even attempted an exam.

> >> No newcomer, repeat NONE, is "answerable" insofar as

> bad-mouthing of others and then demand demonstrations of desire,
> motivation, and resolve. Heil has no such authority to demand
> everyone do has Heil says nor to follow in his exhaulted ways.

My way aren't exalted, Len. I'm a ham. I enjoy it. You might enjoy it
too if you ever got off your duff. Instead, you sit for hours, writing
your gripes about morse testing and about amateur radio in general for
those who really don't matter in changing the regs to suit you and who
likely don't care whether you ever get a ticket or not.

> I've already said that amateur radio is a fun and interesting hobby
> with lots of potential...but it is not the raison d'etre for everyone
> nor should it be (to sane people). It is not controlled by those
> who have a lot of time-in-grade yet some of those individuals
> assume such control any way they can. That has been amply
> demonstrated.

Actually, Len, amateur radio is pretty much controlled by some of those
with a lot of time in grade. That it irks you is meaningless. Amateur
radio is what it is. YOU have potential within amateur radio. Perhaps
potential is all you'll ever have.

> >> >Do you speak for someone other than yourself?

> amateurs. I happen to have the time and energy to post here
> although the time has become non-productive in view of all
> the demands to show motivation and desire by some officious
> status quo-ists.

If the lack of productivity bothers you, you can always take on the
scuba diving crowd and try to get some of their regs changed.

> >I don't believe that anyone obtains electronics knowledge through simply
> >studying the Q&A pool and I don't believe that you ever thought that is
> >what I meant by my statement.
>
> I can only read what is written. Heil is welcome to his beliefs.
> Heil is not welcome to impose his beliefs on others.

Then what, pray tell, are you attempting by your effort to changes regs
effecting amateur radio?

>   <amateur Extra test question omitted due to non-understanding>
>
> >Chew on the fact that you can build as many transmitters as you'd like
> >right now. You don't even need an amateur license. That amateur

> Heil doesn't have any valid response on the morse code test,
> is only capable of puerile personal insults against those who
> desire the code test elimination.

The only thing stopping you from obtaining an amateur radio license is
Leonard H. Anderson. I don't prevent your success in becoming a ham.
Oh--and this thread was not about the morse code test. Try to keep up.

Dave K8MN

I never said that it was required that you answer. I never demanded an
answer. You really seem to have a problem with anyone who questions
your motivation.

If memory serves, it was more like "I think I'll..." There's nothing
wrong with going straight for the Extra. What's your call?

> Just what is holding Heil up from upgrading to being a human
> being instead of officious radio god?

The answer to your query is: Foghorn Leghorn.

> >Aside from a "time in grade" requirement for the Extra years back,

> "explained" during the written test, something which is not legal.
> Yes, I'll say flat out that those six-year-olds had a "manufactured"
> test passing.

I remember your comments along those lines when they were first made.
That's about the time I began to take a dislike to your boorish manner
and windy posts. Be that as it might. Those kids received amateur
licenses--something which has eluded you. That one really seems to
stick in your craw.

> >What about this idea that those interested in becoming hams "should"
> >enter as youngsters. Even when I held a Novice ticket, I ran into
> >Novices of all ages.
>
> All the tales told in here concern entrance into amateur radio
> during teen years as the only way to "really get into amateur
> radio." Those few who post that got into it in adult years
> either were military-trained in morse or they got no-code-test
> Tech licenses. The latter seem to be shunned as not being
> "real hams."

Can't be ALL the tales. I just told you one which doesn't fit your
mold.

> >... Is it because it would be impossible for you to start
> >as a youngster?
>
> Irrelevant. "Getting the young" into amateur radio is an old,
> trite slogan. Youngsters are very impressionable in teen
> years, can be "imprinted" with goals, truth, falsehood, or
> whatever. That's elementary psychology 101.

Yeah, that's the reason, Len. They were desired for indoctrination and
brainwashing. You're begining to sound like some character calling a
radio talk show.

> If amateur radio is such an "important" thing, it would seem
> better for amateur radio that it should attract newcomers
> of more adult years. It is doing so now, but the overwhelming
> majority are going for the no-code-test Technician license.

Sure--because it is currently the easiest route. Why do you think so
many went the Novice route in earlier years?

> >But amateur radio is one place where morse use is alive and well. The
> >mode is used extensively.
>
> By the ARRL's own poll, the best "extensive use" is second place
> behind radiotelephone and that second place is on HF bands only.

Yeah...and?

> >Why shouldn't ham radio be the last place to require code testing?
>
> Why should it be required in the first place?

Are you reading what I'm writing?

> The code test has always been in place for an amateur radio
> license. In the beginning and the formation of the first US radio
> regulation agency (1912), every other radio serivce used morse
> code mode. It made sense in 1912 to have all radio operators
> demonstrate skill in a common OOK spark mode. As the
> radio world evolved and moved away from morse mode, it was
> no longer needful as a regulatory test. It might have been kept
> there by retired radio men who preferred to have a place of
> radio recreation or those laid-off morsemen who could not
> learn the newer radio of the vacuum tube era.

Neat trick. Take some facts you gleaned from the web and then tack on
some distortion of your own at the end.....yawn

> There has never been any manual operator test of any kind

> for amateur radio license tests except code. That is not a
> qualification to keep morse code testing.

So? What would they be--a set of tongue twisters for phone? A series of
"Ahhhhs" to see if the applicant could keep the VOX open?

> >We already know that you have a problem when anyone asks you about
> >motivation.
>
> We already have a problem with patronizing, arrogant demanders
> of motivation and desire to "prove" something to them. No one
> need "prove" anything about desire or motivation to anyone...
> except the control-freaks and those who demand all "do as they
> did" or become "lesser" humans. Pfui. Go suck a hot 807.

No, Len. I think I'll spend several hours operating tonight. I'll do
what I like. You do what you can.

Dave K8MN

>This is getting to be a "show me your papers!" sort of thing.
>Not nice to go there but the temptation is very strong.

You should know....why don't you just use one of your "AOL Hometown" pages
and post your CV...AGAIN...anyone who can't get to sleep can then sign on and
re-read your (dubious) litany of previous employers.

Just think...you can re-upload your CV at least 7 times, assuming you are
on AOL 6.0.

>A true thing is that I have no US amateur radio license.

Nor a commercial one, in as much as you assert that you let it "expire", October last...

>A false thing is saying that
>"credentials" mean no knowledge of radio or electronics pertaining
>to amateur radio.

"Inside" the box...no question..."Outside" the box, you have absolutely "zero" practical experience. I am willing to be my 9 year old has more practical experience than you do.

>A false thing is saying that "credentials" means
>I have no experience on HF radio...

But how much experience do you have in AMATEUR practice...?!?!

>or VHF or UHF or microwave or MF or LF or VLF radio.

But how much experience do you have in AMATEUR practice...?!?!

How many AMATEUR RTTY or digital nets have you participated in?

How many CW or SSB nets have you participated in?

How many times have you participated as a member of ARES, RACES, or other recognized AMATEUR organization?

How many Amateur Radio contests have you participated in?

How many, Lennie....?!?!

>And, by association, I should not have
>any voice in any US federal radio regulations because I am not
>licensed in a particular radio service?

Nope. You should say to the feds what you want. But take your snotty "rub it in your face" attitude out of here.

>It must be so. The First Amendment went away. Goodby...

"Goodbye"...?!?! Oh HAPPY DAY!

I know...it was a troll.

>I was never advocating any ways to "make amateur radio better."

A LIE. You have said that very thing on numerous occassions.

>>A guy who received his
>>license last week has a week's more experience in amateur radio >>than

Leonard H. Anderson.

>Heil belabors the "gotta have a license" need. "Credentials!"

A LIE. "Heil" said "experience". His statement was correct. You have NO experience in Amatuer Radio.

>Heil has a remarkable imagination.

Better than some.

>No need. I have a good memory.

Obvilusly not. You quickly forget how many insults you have hurled when those insults get returned.

>>You adopt the stance of
>>the patronizing old communications pro, here to tell the radio hams >>how things should be.

>Heil has a beef about non-hams? Try fish.

>Clue: Every newcomer to amateur radio is a non-ham.

His comments never said "non-ham". He said YOU.

>Patronizing? Only to
>those who don't appear to know what they are talking about or
>inventing some story concerning HF comm that was standard
>operating practice before I entered grade school

Leonard, Leonard, Leonard....I thought we had you broke of that attitude...You've actually been tolerable the last few days. Now you are trying to reintroduce the "1930's" standards lie again.

>I'm not telling radio hams how things should be.

BBBBAAAAWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH AHAHAHAHAHAHAHAHA

>Those in here
>can't be told...they already know what is what and what is best
>for everyone.

Then you ARE using a mirror to shave in the mornings!

>I'm talking about the FCC's code test to get INTO
>amateur radio.

Well then..we FINALLY agree. Welcome to PCTA Heaven, Lennie!

>>I've pointed out that you have no
>>experience as a radio amateur thus little to base your views upon.

>Quick, write your congressperson and demand that all unlicensed
>personnel at the FCC be summarily dismissed for "lack of views
>and amateur experience!"

And Lennie is quickly reoriented to the fact that Dave didn't say anything about your comments to the FCC...It's about your patronizing, lying tripe in here.

>>On what bands do you do your DXing, Len? It doesn't have to be >>DXing, Len.

>Something must have slipped Heil's mind, too. He imagined
>something about me "wanting" to operate some HF rig with
>full power into big directional antennas working some distant
>island?

Then that would squarely and appropriately place you in the "Technician" class license. The one that DOESN'T require a Morse Code exam by international treaty...the one YOU claim is NOT codified into US law...

One that YOU are not sufficiently capable of passing.

(If you were, you would...but you're not...don't sweat it...lot's of mere mortals have failed the test before)

>Why would I do that? There was no "glory" in that, merely an
>experience while serving in the US Army before most in here
>became of legal age (or even existed).

Then why smother us with it? I don't think a week goes by that we don't get at least ONE reminder of your RTTY days in 1953....

>I could continue on experience in microwave radio......

You HAD to get him started, Dave...?!?!

>I might send Heil a box of fasteners...to help him screw himself.

And so summates another LennieRant..brought to you by RONCO....

This convenient ploy is the rallying cry of the QCAO but it lacks any foundation of credibility when you consider that the successful applicant for *any* amateur license is authorized to build his own station. Would you want me putting my homebrewed "creation" on your favorite VHF band if I hadn't even demonstrated a knowledge of ohms law? Get real!

Good luck on this one now!

>Heil's imagination is verging on the psychotic.

     And of course YOU would have first hand information o what is
"psychotic"..???

>Maybe, just
>maybe I might have an interest in interplanetary DX,...(SNIP)

    How did I know it would come to this...?!?!  Little green men.

>As a non-amateur I've communicated with a station ON the moon.

    No..you (allegedly..I really doubt that you did it) remotely controlled a
radio telemetery transmitter.  Notable for it's distance from it's point of
origin, but nothing more.

 >As I said, Heil's imagination is getting close to psychotic

    This from the guy who wants to talk to ET on Amateur Radio.

>All those things are fun and interesting for others.  Excellent
>for them.  They are not the justification for continuation of a
>morse code test for an amateur radio license.

     And all things you CAN do with a NO CODE license that is available today.

>>Your parting shot at "those who have no clue at all" makes
```

>>that all seem highly unlikely.

>Ah, but the "credentialled" in here have the official permission
>to use "noclue" because of that "credential?!?"

Lennie the Loser's 78RPM phonoplayer is stuck on "credential". The keyword here is "EXPERIENCE". As far as Amateur Radio goes, he has none.

>I've stated that the US military has used FHSS operationally
>since 1989. In the SINCGARS family of manpack and vehicular
>radio use.

Lennie diverges into many military acronyms for communications systems that have no practical application to Amateur Radio. This because he has no practical EXPERIENCE in Amateur Radio and it is necessary for him to cover his tracks.

>I've given websites for more information on that.

And quickly discarded as inapplicable.

>Many long-timers still think that the US military uses old WW2
>radio sets, uses CW for communications ("behind enemy lines")
>in the field. They have no clue about spread-spectrum modes
>and seemingly don't care. They have no clue.

If thinking that makes you happy, Lennie...then by golly you can go to bed slap-happy tonight. Foolish and confused...but happy.

>There is a very long list of what can be said about radio amateurs'
>knowledge of the rest of the radio world.

And of course YOU are going to enlighten us, right...?!?! Thanks, but no thanks...I'll take my clues from "Monitoring Times", Popular Communications" and a dozen other periodicals that grace my desk.

>That is very
>unfortunate since the rest of the radio world has some interesting
>modes, some of which could be adapted to amateur radio.

But since YOU can't find any VALID reasons to get a license and share it with us ON THE AIR, then I guess we will all have to be ignorant in our own little bliss, I guess.........

>I made a sarcastic comment.

And THIS is NEW...?!?! When HAVEN'T you?

G'nite, Lennie. Be careful who you shake hands with without looking them in the eyes.

Well, I think the key to that sentence is the words, "I've known."
Since I have no idea who you've known, those words leave little room
for discussion.

Do you think demonstrating Ohm's law knowledge is sufficient to ensure that you will create a rig that operates within the rules?

Bingo. In fact, if that philosophy is carried to its logical extreme, the
entire exam can be simplified to the following questions:

Q1) Who regulates the Amateur Radio Service?

A1) The Federal Communications Commission

Q2) Where can the rules governing the Amateur Radio Service be found?

A2) Part 97

Everything else is optional.

Yup. Of course we have a shining example of what happens to a radio service
that has no exams but simply trusts the users to read the rules and abide by
them.

The problem is that your outlet (certain members of this newsgroup - nocodes, etc) has not always been a willing participant in your efforts to release your aggression. It is one thing to release your aggression by pounding on a pillow and quite another to release your aggression by verbally pounding on another human being. The latter may feel good to you, but it is darn rude to those it is directed at.

And most of that isn't handled on CW, and in the relatively rare cases where CW is used, it is operator choice, not necessity.

Or that enough hams will choose CW on their own that any need for Morse code in the Amateur Radio Service will be adequately met. The recent rules changes have not slowed me down. :-)

Yup, Dwight, it's right up there with being accused of baby-killing, Nazi
activities, being in league with Satan, not to mention dandruff and
halitosis for the sin of passing a code test.

I can't speak for your Superior, Larry, or his call in judgement. I can figure you're an easy read here, and that you--and your six cohorts in unison--were an easy read to him. I can also tell you that I respect him for his read--I wouldn't want to be beside you in a disaster or war situation either.

Okay.... give the tests (Tech and General classes) in fill-in-the-blank or
what ever method you wish to. If the "multiple-guess" format irritates you
then, change the format. Add 300 or more questions if you want. Doesn't
matter to me, still will get the same type of score as stated.

The FCC does not make that an easy task under some circumstances.
>
Last year a few upstate guys who knew famed dxer & contester Gerry
Mathis w3gm wanted to keep his callsign actve in the contests so they
formed a club and applied for w3gm as the club license callsign. I
don't have the details but they had to go thru all kindsa really
twisted pushups with Uncle to get that to happen. It strikes me as a
bush-league clerical detail with no "regulatory" implcations at all.
Why the heck is reissuing a deceased individual's callsign as a club
callsign such a big deal at Hq.?

In a sudden fit of his patented patronization, W1RFI blurted out:

> Do you think demonstrating Ohm's law knowledge is
> sufficient to ensure that you will create a rig that
> operates within the rules?

Of course I don't think that, nor did I ever suggest that I held such an
assinine notion.

But it would be a real challenge to create a rig without such knowledge.

For the less than bright folk: 'I' (Indian) for current, 'E' (Eagle) for
voltage (electromotive force), and 'R' (Rabbit) for resistance.

Yep, I meant to say "Morse code testing" above and just typed too fast.
Judging by what they said, the FCC apparently doesn't favor any single
mode over any other mode.

Now wait just a minute, Dwight. Those three math, science, and electronics guys that Larry has known are probably decent enough people and simply cannot be dismissed out of hand.

Of course not! But thats like asking if only having knowledge of a steering wheel qualifies you to drive a car. It is just one of many things you need to know.

You're probably right, Kim. I likely missed the reality that your
comment really was directed at cooking.

Yep. In a case where the rig has two modes, SSB and CW (which is almost
universally the case, still) and conditions deteriorate to the point
where SSB is useless, it is indeed the choice of the operator to switch
to CW.

Sorry, all the New Age hams don't and won't have that choice.

So when do you plan to start jumping onto all the jokers who are so
stupid that they blame all code suporters for the fact that they've been
unable meet the requirements for a HF ham license? Your "stuff" isn't
the least bit onesided, is it ED?

Of course not! You'd much rather have someone who would pander after
your every sensitivity and sensibility, so that you could just go down
the tubes without ever knowing how clueless you really are!

Nobody blames the code supporters, Dick. Right now, S25.5 is getting
all the blame for the outmoded code requirement.

Yes, you forgot to state that you saw this during WW2.

To all going to Dayton this weekend..a safe trip.

I will, of course, be traveling west afterwords to sit down for a leisurely tea and strumpets with the Upyours Furher Leona Anderschmidt.
I have just purchased an excellent digital video camera which also takes stills and will endeavor to document the little man attempting to weasel out of his invite to me.

I will post pic and audio as well on a website, to be named later. Vegas odds are 20:1 on LennieNoShow and 5:3 that his actual physical appearance mirrors his character here on rrap.

I bid your ado and look forward to having a pleasant confab with good 'ol Mr Wilson..errr Anderson

Boy is this going to great or what....

(cue LHA's lame excuses)

I sometimes wonder if Larry is the infamous "Ed Anger" of the Weekly World
News. "Ed" is an expert at self-glorification, while cutting down those who
don't share his opinions.

Its not a question of "priviledges," its a question of enjoyment. Todays former CBer hams are all convinced that they "know it all" and arent open to suggestion or example. They don't want to be hams, they want to be CBers with more frequencies to use, and to get QSLs without having to pay for a PO Box. Ask 'em their QTH, and they say"Northern Michigan," or some other imprecise FCC evading reply learned over years of illegal operating. They dont break into a QSO, they "QSK." QSL?

It wasn't just code, it was Bash-style testing, too. It was reduction of code with no offsetting change in the theory.

Sure, my privilege wasnt reduced by making it available to everyone. What I lost was my enjoyment.

Gave me time to take up Model Railroading, and convert the shack into a train room. If I can get unload some $20K worth of gear, I'll have some money to spend on new brass engines!

I hate to burst your bubble, but that's been going on for the past 20+ years.

>Ask 'em their QTH, and they say"Northern Michigan," or some other imprecise
FCC
>evading reply learned over years of illegal operating. They dont break into a
>QSO, they "QSK." QSL?

A legit station and licensee already has an address known to the FCC, and you
can easily look it up on qrz.com. What's imprecise and evading if the
information is already known?

It's because there's not enough hams that fit into the "clique"

Of course that is correct - assuming that one doesn't view himself as a "victim" of all sorts of persecutions by those who, without giving it a second thought, hopped right in and just did it, and who tend to view the protestations of him and his ilk as more than just a little bit lame and laxidaisical...

Uh hunh. And remember, you said you were dealing with a three year old.
I have a three year old grandson who is very bright and I know he
wouldn't make that connection. Takes some real learnin'.

You need to read a little closer, Cecil. They indeed do blame code
tested hams who believe in the viability of code and the needed testing
to support it for their own personal shortcomings.

>another about it.

They (FCC) don't have to. The regulation needs
to be sustained by clear and comelling rational.
No proof that code has any such clear and compelling
evidence as to need and the FCC will just drop it.
The "burden of proof" is always on the side
that wants a new regulation and/or that wants to
keep existing regulations.

>You think the FCC is going to say "Gee, we've neglected
>enforcement for a long time, and that's why you have stuff like the W6NUT
>repeater?" I wouldn't bet on it.

Not sure as to how that statement relates to your
other comments.

That is clearly my opinion and, as you noted earlier,
it can neither be refuted nor defended in any absolute
way. I think that if there truly was a correlation
between code tested vs noncode tested
as to good behavior vs poor behavior, that
correlation would have surfaced by now.

>>>
>>>Sure - but they may not even do that. I don't think they are required to do
>>so
>>>in a case like this, because they've already made it abundantly clear to any
>>>casual observer that the ONLY reason they kept the code test was because of
>>>S25.5. They said it "serves no regulatory purpose" other than S25.5. "Serves
>>no
>>>regulatory purpose" from a government agency is the kiss of death for a
>>>regulation so described..
>>
>>We'll know for sure in 2 years or so.
>
>Yup - if S25.5 goes away.
>
>>>>>Not saying I want that to happen, but I won't be surprised if it does.

Copy-pasted From today's ARRL Letter:

While REACT has been associated primarily with Citizens Band in the past, the organization has widened its focus to embrace amateur and other services. ARRL and REACT share common goals in terms of emergency communication. The primary mission of REACT is "to provide public safety communications to individuals, organizations, and government agencies to save lives, prevent injuries, and give assistance wherever and whenever needed."

Is there a drift here we need to wise up to?

Hi Dick:

Say, it's quite likely that I've missed a whole lot of really important
stuff here in this NG while I've been absent.  And, not that I intend to get
all that involved with it again--the intellectualism would be way too much
for me--but could you please let me know where I might find some evidence of
the "jokers who are so stupid that they blame all code supporters for the
fact that they've been unable to [sic] meet the requirements for a HF ham
license"?  See, when I was a regular here it may be very likely that I
missed some of them; but I know I never saw anyone claiming that.  At least
I don't think I did.  Could ya help me out here?

You do recall that the ARRL intends to encompass all forms of radio into the official amateur radio organization, right? REACT is *the* "richest club here in the North Texas area--a hearty addition to the fold and we are lucky to have them! In fact, REACT has had some great opportunity for repeater sites in our downtown Dallas (not sure about Ft. Worth) area, and I am certain that an official affiliation with them will help amateur radio in the Dallas area--maybe even get the Dallas Amateur Radio Club up into the "heights," for a change!

Welcome Aboard, REACT!

Takes real learnin' to memorize, "I equals E over R"????

They can probably contemplate that fact while they are working satellites,
moonbounce, VHF, UHF, and CW on the only CW-only frequencies.

Nobody is blaming somebody else. Everyone is blaming S25.5, even the FCC.

You mean code tested hams who believe in the viability of code have some
sort of supernatural subliminal mind control over the FCC? I sure can't
tell it from what the FCC stated. (snicker, snicker)

Give us a break, Dick. The PCTA folk have no more control over the rules
than the NCTA folk. S25.5 is the controlling factor at the moment.

Nuthin new. The ARRL Pres is a REACT member in his hometown of Dallas, having recruited the local REACT leader into ham radio, then himself being recruited into REACT.

I call it the 'warm-body syndrome'. ARRL wants 'em all signed up as dues paying members. FCC wants 'em all licensed as hams since ham radio is where they have always thought all radio hobbyists belong. We lose, big time.

Next? Why not tests so easy as to screen no one? (what do tests do if not screen applicants?) Well, we're not too far from it now. And the late BOD idea of just allowing anyone to work CW on the strength of the assumption that if they're working CW they must be CW trained, which was seriously tossed around a couple years ago, was just a little to far ahead of its time.

 Which means exactly nothing it one doesn't understand the concepts
behind the symbols.

My apologies to his three friends. I'm sure they're fairly decent people and my intent wasn't to dismiss them. My intent was to dismiss Larry, or, at least, Larry's argument. :-)

And how often does conditions deteriorate so much we can't simply switch frequencies or bands, Dick? After all, that is why we have a wide range of frequencies and bands available to us. In other words, switching modes is not the only option available.

In case you haven't heard (after all, it was mentioned in the paragraph above), REACT has been drifting away from CB for many years. In fact, based on what I've seen recently, REACT is probably far more involved in other radio services than it is with CB today.

A SOUTHERN POEM

Pappy's Gal

Suzy Lee fell in love.
She planned to marry Joe.
She was so happy bout it all,
she told her pappy so.

Pappy told her, "Suzie Gal"
you'll have to find another.
I'd just as soon yo maw don't know,
but Joe is yo half-brother.

So Suzie forgot about her Joe
and planned to marry Will.
But, after telling pappy this
he said "There's trouble still".

You can't marry Will, my gal,
and please don't tell yo mother,
cause Will and Joe and several mo,
I know is yo half-brother"

But Mama knew and said "Honey chile,
do what makes yo happy.
Marry Will or marry Joe,
You ain't no kin to pappy!"

Well, that's novel. Leave your roots, huh? I suppose they use the
Internet instead, with maybe a little FRS thrown for RF flavor?

Jim Kelley says:

>> >"CW is analogous to a hand crank. It is no longer necessary."
>> >
>> >I believe that is your view as well, is it not Mr. Hans?

I responded:

>> That's not my view at all!

Jim Kelley got miffed and said:

>You distort the truth, sir.

Jim, that's just your no-balls PC-worded way of calling me a liar.

To set the record straight:

1) I do *not* believe CW is analogous to a hand crank. I think it is an important mode in amateur radio, and I use it regularly.

2) I am not convinced that the Morse test is needed any longer.

These views are consistent over about the past 30 years, and no matter how you twist and spin to attempt recover face here, I have not "distorted the truth, sir".

Good luck on this one now!

Hans, K0HB

Dwight:

That's where you would be wrong. Absolutely ALL of the participants
in this newsgroup do so willingly. Nobody here is being compelled by
any outside influence to do so. And if you're going to accuse someone
of "verbally pounding on another human being," you've got the wrong
man, anyway. That's K4YZ's schtick.

Dick:

Precisely! Not only have I written volumes in this newsgroup, but I have also READ volumes here. Those we refer to as the "no-coders" are certainly not deserving of any special consideration with regard to their polite, even-handed comportment during this debate. Those of us who support traditional licensing standards have been accused of every possible crime that can be committed against the ARS, and single-handedly blamed for its failure to attract bright, young, computer-literate newcomers. Their smug, politically-correct attitude emulates the New-Age liberals they wish to embrace as advocates to their cause. And the worst part is that they must, by now, realize that they were totally wrong about the effect of reduced licensing standards. It is not attracting anyone to the ARS in any significant numbers, much less the young people they said would beat down the doors. They've been caught in their lies and deception, and their only way out is to discredit those of us who were right all along.

I think it is more analogous to using horses for transportation. CW
can get through when the most popular voice modes cannot. Horses can
go some places where popular vehicles cannot.

> 2) I am not convinced that the Morse test is needed any longer.

I'm not aware of any horse-riding test.

Hey Hans,

I've been responding by email because your newsreader sends two copies
of your messages; one to me, and one to the newsgroup. Why don't you
pick just one, and stick to that - unless your point is simply to
showboat for everybody out here.

And to hell with the FCC, they talk out of both sides of their mouth.
On one hand they want all radio hobbyists licensed then they go out of
their way to create things like license-free MURS, FRS and open up the
GMRS to hobby users for the cost of station license.
>
'Way back I was involved in CB as the means for providing comms for
the municipal Townwatch organization which I headed up. We had 135
citizens involved, almost none had any interest in radio as such. A
"founding principle" of the Class D CB band was to provide citizens
like us with a way to use radio for our kinds of purposes.
>
It was a bloody comms disaster from the gitgo, I couldn't squeeze
reliable CB comms out of that "system" even within the 0.56 square
mile passive patrol area to save myself. I managed to move the
operation up onto a VHF business freq before we lost any more members
who didn't want anything to do with the crap on 27Mhz.
>
REACT was also out there galloping around like a bunch of
uncoordinated idiots who decided that they were the vigilante squad
the police really needed. So of course they wound up basically told to
hit the road by the police for causing nothing but grief and
headaches. Thirty years later the Townwatch group is still up and
running on 155.something.
>
Thus cometh my total disdain for that whole bunch and their bands.
Yeah, we really need them in the ARRL . . .
>
I dredged up their website and sure it looks all fuzzy-warmy but I'll
believe it's much different now than it was back then when I see it.
>

But you made more errors than just typos, Len. I called them to your attention in this newsgroup, but you refuse to address them. That's denial, pure and simple.

> I will not admit to manufactured "errors" which
>are not in accordance to what I stated.
>
The only one manufacturing your errors is you, Len.

>Not too long ago I took a slightly different sample group observation
>on the number of amateur radio licensees in the POST-restructuring
>period; i.e., after April 15, 2000.

The subject line of that thread was "restructuring - did it make a difference?". No mention of POST-restructuring.

Or do you mean the thread "who is what"?

> I specifically avoided a month and
>a half immediately thereafter for the VEC applications and FCC
>database data to "settile down," explaining why then and going into
>detail in a following post.

"settile"?

> N2EY said that was "wrong" and then
>presented data that included end-of-month totals PRIOR to the
>restructuring.

In the thread "who is what" I questioned the avoidance of the months of April and May 2000. In the thread "Restructuring - did it make a difference?", I posted numbers for the year starting April 1, 2000 and ending March 31, 2001. You took issue with me on that, saying I was "wrong", Len.

Which thread are you talking about?

> One cannot lump in prior-restructuring data to a
>discussion of POST-restructuring.

I agree! But the discussion was not about POST-restructuring.

>N2EY claims his method is
>"correct."   ???
>
It is more correct than ignoring the six weeks after April 15. 2000, because some pre-April 15 changes might be in those totals.

>I supplied a web address that goes into Project Diana history
>in technical detail, written by one of the participants.

And I added additional information not found in that article. Was ANY of my information incorrect?

>N2EY
>found a flaw in my typing, did not find the correct web address,

NO, Len that's NOT true.

The URL you gave results in an error message. The web address I posted gives a web page about Fort Evans and Project Diana. Maybe it doesn't show the exact page you meant, but I can't read your mind and tell which page you intended.

My URL would lead readers to Project Diana. Yours wouldn't.

>and tried to make every following statement I made "wrong"
>because of this error and also for not over-glamorizing the
>"ham achievements" of Project Diana, the first-ever
>demonstration proving that the lunar surface could provide
>radio reflection.

I corrected some of your errors and added more data that wasn't in the original article.

Was that a bad thing to do?

Since this is a ham radio newsgroup, I included info about hams involved in Diana. They included the officer-in-charge and the head of the lab's research section.

You did not mention ANY amateur radio involvement in Project Diana.

> Project Diana used highly-modified old
>radar equipment for the sole purpose to determine whether
>or not the moon could be a reflector.

The article listed several reasons for the project. But no communication was done using the Diana setup.

I don't know for sure, but it is quite possible that hams were the first to conduct 2-way radio communication via moon reflection. You claim to know something about "ALL of radio", Len - who WAS the first to "pioneer" 2-way moonreflected radio COMMUNICATION?

>This was not a "radar
>application".

Flyspecks, Len.

If it's not "radar" then why is the article titled "Radar Echoes from the Moon"? Why is the equipment referred to as "radar" in the article? The author was involved in the project, Len, and he used the word "radar" repeatedly, and not just to describe the equipment.

What Diana was not is a communications system.

>..there is no need for direction and ranging to a
>body that has long since been timed and quantified as to
>direction and ranging.

More flyspecks. The people who actually did Project Diana called it radar. That's good enough for me. If you want to argue about it, tell them they are wrong.
>
>N2EY found fault in my NOT glorifying all the amateurs who
>were part of Project Diana and implied/insinuated that
>amateurs were the "real" basis behind the work done.

You did not mention that ANY hams were involved, Len. In fact several were, and they occupied high positions. The officer-in-charge (a long-time radio amateur) had conducted moon reflection experiments in 1940 - more than FIVE YEARS before Diana. He is identified in the article you cited as the driving force behind the project.

Where did I say that hams were the "real" basis behind the project? Give us some credible quotes, Len, not your flawed and error-prone misinterpretations.

>He
>specifically took to task the "military-industrial complex"

>(a phrase not yet in use) which had "taxpayer dollar support"
>as if military budgets in 1946 were fat and free-spent.

Quotes, please. Did I say the military industrial complex was a bad thing? No.
You supplied that misinterpretation.

What I DID write was that hams do not usually have anyyhing like the resources
of a Project Diana. In addition, they have to do such things on their own time
and spend their own money on them. Those who did Project Diana were paid for
their time and did not have to finance the project themselves. BIG difference.
>
>Project Diana was the first radio moonbounce effort under
>sponsorship and direction of the US Army Signal Corps,
>Evans Signal Laboratory (earlier name was "Camp Evans").
>

But it was NOT the first radio mooounbounce effort.

>It would seem that some folks' pride is so hurt that they
>will not recognize nor appreciate true pioneering efforts in
>radio unless it can be connected somehow, however
>tenuous the thread, to amateur radio.

I suppose there are some folks like that. Not me, though.

It would seem that some folks' antagonism to amateur radio is so great that
they will not recognize nor appreciate any progress or accomplishment by hams.
Nor will they acknowledge as significant that radio amateurs were and are
involved in many pioneering accomplishments.

>Pioneering is pioneering and the credit goes to the
>pioneers and their sponsor.

You introduce the word "pioneering" Len. Seems to me that being first is all
that counts with you.
>
>If the pioneer group is not "amateur oriented," well happy
>TS punching.

I have no idea what "TS punching" is.

>The radio world is very large with a lot of
>researchers and experimentors out there, the majority of
>them professionals.

How do you know that, Len?

--

I'll restate my question: If the holder of a Technician class license passes
Element 1 (5 wpm code) and gets a CSCE for it, but does not otherwise upgrade
or pass other tests, does that Technician have any HF amateur radio privileges,
or not?

Take a look at the AH0A site. Note that in the license totals, Technician and Technician Pluses are lumped together in one number. Note also how that number has changed in recent months.

And do try to work on your denial, Len.

Okay, so you agree that a hand crank is still necessary.  I was wrong.
It's not really what I meant, and I think you know that.  But
nevertheless, you have my most sincere apology.

> Precisely! Not only have I written volumes in this newsgroup, but I have also READ volumes here. Those we refer to as the "no-coders" are certainly not deserving of any special consideration with regard to their polite, even-handed comportment during this debate. Those of us who support traditional licensing standards have been accused of every possible crime that can be committed against the ARS, and single-handedly blamed for its failure to attract bright, young, computer-literate newcomers. Their smug, politically-correct attitude emulates the New-Age liberals they wish to embrace as advocates to their cause. And the worst part is that they must, by now, realize that they were totally wrong about the effect of reduced licensing standards. It is not attracting anyone to the ARS in any significant numbers, much less the young people they said would beat down the doors. They've been caught in their lies and deception, and their only way out is to discredit those of us who were right all along.
>
> 73 de Larry, K3LT
>

To state another cynical-chic viewpoint, Larry, never attribute to conspiracy what can more easily explained by stupidity or sheer human cussedness. There is nothing New Age about self-deception, blaming others for your problems, and pronouncing piously about what the requirements 'should' be. Dig out St Augustine for a real addiction problem. And, of course, don't forget Aesop's sour grapes.

That it happens with respect to code tests should not surprise either one of us; we did a bit of it as has just about everyone who did not do it for Sam's military. What surprises me is the depth and vehemence of it. Is it truly necessary to deconstruct every living person who ever passed a code test? The level of mythology is frightening and there seems to be no compunction about attributing sub-human motives even if you agree that code-testing may have seen its day. Who started it is irrelevant but it has become a bare-knuckle barfight in some quarters.

And what the hell for? Whatever one believes 'should' be the case, it isn't and won't be for some period of at least two years. Deconstructing me, convincing me, or putting a contract out on me does not change that; my opinion or actions are totally irrelevant. I've seen saner reactions from alkies with the DTs or drunks in general. At least they don't blame me for their galloping headaches.

So I tend to deal with these guys about like you deal with a drunk; not out of malice but because it is the only humane way to deal with them. Don't give an inch, don't help them cover, and call things what they are. Engaging in debate merely allows them to put off for one more night the decision everyone knows is necessary: learn code or shut up and wait. Make the pilgimage to Dayton or HPMs grave for all I care, become the resident genius on everything from the regs to 160 meter propagation, buy every book or magazine in creation, lead the club's emergency activities and spearhead communication for the Special Olympics; it still does not cut it. Yes, you are a sterling human being but you are not an HF Amateur. I know Ed might disagree but I think you are doing them a disservice even being nice.

Jim Kelley says:

>Okay, so you agree that a hand crank is still necessary. I was wrong.
>It's not really what I meant, and I think you know that. But
>nevertheless, you have my most sincere apology.

If you'll be kind enough to quit grape'n the gropefruit over at the watercooler and hand me that club layin' there. No, no, not the stick, the club. You know, the one Gorf gave me when he retired. Yeah that's the one, Gorf's big ol' club, I'll just go ahead and club this sum'bench and be done with it.

73, Hans, K0HB

It's good to see you finally admit the real reasons you want to retain code
testing. I'm saving this quote, just in case you try to weasel your way out of
it by saying I misquoted you.

It might make more of a difference if amateur opinion meant anything. As it sits, we are personally responsible for these dipsticks' failures and have zero authority. Gets a little irksome having the lapdogs biting your heels.
